Graphics that follow the game.

Broadcast graphics for netball livestreams, fed live from PlayHQ and run from one Mac.

VERSION 1 · OCTOBER 2026 · BY PIVT

ABOUT THIS GUIDE

Graphics that follow the game.

FirstPass Studio is a Mac app that draws broadcast graphics for a netball livestream and sends them to your vision switcher. The scores, clocks, ladders, fixtures and line-ups come from PlayHQ's public data, so there is nothing to type in during the game.

This guide starts with the way most nights run, one operator and Studio doing the rest, then covers running it by hand, setting up a competition, sponsors, athletes and the Stream Deck.

5 s
The live score, quarter and clock read from PlayHQ every 5 seconds while the game is scored.

31
Broadcast graphics, from the scoreboard and ladder to the sponsor wall, plus a test pattern.

17
Competition logo animations, and six intro and outro styles.

1
Operator on a followed night. Sequences run the run-up, the breaks and full time.

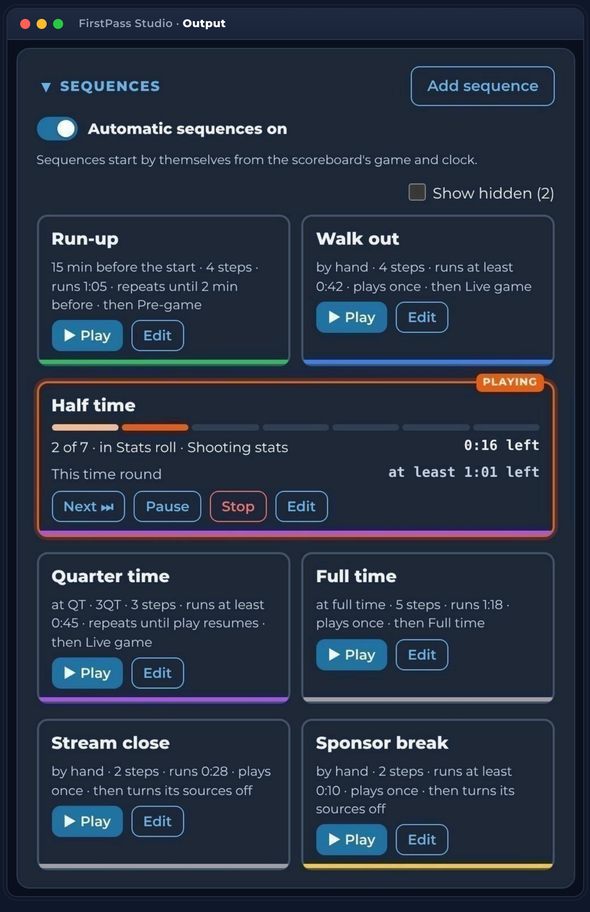

IN
PlayHQ
The fixture, ladder, line-ups and the live score from the scorer's tablet. No account, no key.

→

ON YOUR MAC
FirstPass Studio
Builds one 1920 × 1080 scene from layers: the base scene, automatic layers, scenes and sequences.

→

OUT
Your switcher
A display, a Blackmagic device or NDI, with fill and key or a chroma colour over the cameras.

The Output page runs the show; the super shot plays by itself.

INSIDE

01 **What Studio is** — The app, the words used and the pages you work in.

02 **Getting started** — Install, on air and off air, the 1P menu, the checklist.

03 **Game night, the automated way** — Follow PlayHQ, the base scene, automatic layers, sequences, music, output.

04 **Running it by hand** — Manual scoring and clock, and a two-person crew.

05 **The graphics** — Every graphic, pictured, with the options worth knowing.

06 **Competitions setup** — PlayHQ link, rules, finals, colours, logos, live viewers.

07 **Sponsors** — Tiers, spots, ads, sponsored moments and proof of play.

08 **Athletes** — Photos, silhouettes, positions and games played.

09 **Stream Deck** — The plugin's keys, the links and timed keys.

10 **Settings and care** — Data folder, iCloud, backups, updates and fixes.

11 **Quick reference** — Keyboard, the night in nine lines, where things are set.

The sample league — Every screenshot comes from Studio running the fictional Elite Netball League: eight clubs named after animals, three divisions, a live game and fictional sponsors.

CHAPTER 1 OF 11

What Studio is

01

FirstPass Studio is a Mac app that draws broadcast graphics for a netball livestream and sends them to your vision switcher. The scores, clocks, ladders, fixtures and line-ups come from PlayHQ's public data, so there is nothing to type in during the game.

1. The words used in this guide
2. The pages you work in
3. The sample competition in this guide

Studio does one job on stream night: graphics. Your cameras, switcher and streaming encoder stay as they are. Studio hands the switcher a picture with transparency (fill and key, or a chroma colour) so the graphics sit over the vision.

1.1 The words used in this guide

Studio
The whole thing: the Mac app, the pages you work in, and the graphics it puts on screen.

On air, off air
Studio is on air while a Studio window is open. On air it talks to PlayHQ, serves the graphics and answers the Stream Deck. Closing the last window takes it off air.

A graphic, or a page
One thing that can go on screen: the scoreboard, a ladder, a lower third, an animation. Each is a web page that Studio draws.

A source
A graphic placed in the scene, with its own position, options and fade. The scoreboard is one source; a ladder is another.

The scene
Studio's own 1920 × 1080 frame, built from sources switched on and off. It is what the switcher receives.

A scene (on the Scenes list)
A saved look: which sources are on and which are off. "Live game" and "Clear" are scenes.

A sequence
A list of steps played in order from one press: a run-up, a quarter-time break, a full-time wrap.

The competition
Everything that belongs to one league: its PlayHQ link, names, rules, colours, logos, sponsors and athletes. Studio keeps a setup per competition and uses one at a time.

The data folder
Where Studio saves everything, outside the app, so updates never touch it.

1.2 The pages you work in

Every Studio window has the same bar at the top, with the FirstPass Studio mark and the tabs in three groups by what you are doing. **Run** is the night itself: **Output**, where the show is built and sent out, and **Scoreboard control**, which runs the board. **Plan** is before the night: the **Production Planner** plans the court and the commentators, and **Socials** makes the night's pictures for social media. **Set up** is done once: **Recordings**, **Competitions setup**, **Sponsors**, **Athletes** and **Devices**. **Docs** sits on its own at the right: it is this guide, with the bar on top. In the app, ⌘1 to ⌘9 and ⌘0 go to Output, Production Planner, Scoreboard control, Recordings, Socials, Competitions setup, Sponsors, Athletes, Devices and Docs.

The right of the bar carries the status chips, on every page, so you can see the night from wherever you are: **ON AIR** in orange like a tally light, with a dot per output that is solid in the output's colour while it sends and hollow while it doesn't (or **Off air**); the game on the board, its dot orange before the clock has started, green from the first clock start or score until an hour after the game ends, then grey; PlayHQ, whose dot is the link alone (green when PlayHQ answers, amber when a reading is overdue, red when it keeps failing, grey when scores are by hand) and whose words give the quarter and clock, or **game completed** once PlayHQ closes the game (**full time** when the last quarter is run down by hand); the sequence playing with its step and the time left on it, or the triggered sequence counting down to start; **Run order** ▶ with what Play next plays and ⏭ with what follows it (also what Skip leaves at the head), shown whatever is playing and gone when the run order is empty; **ATEM** while a switcher is set up (green when it answers, red when it doesn't), and **REC** while a game records (grey while Record games waits for one). The chips are status, not links; the tabs take you to a page.

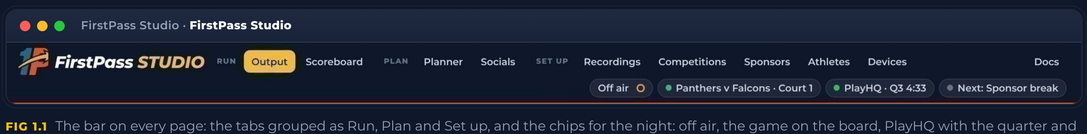

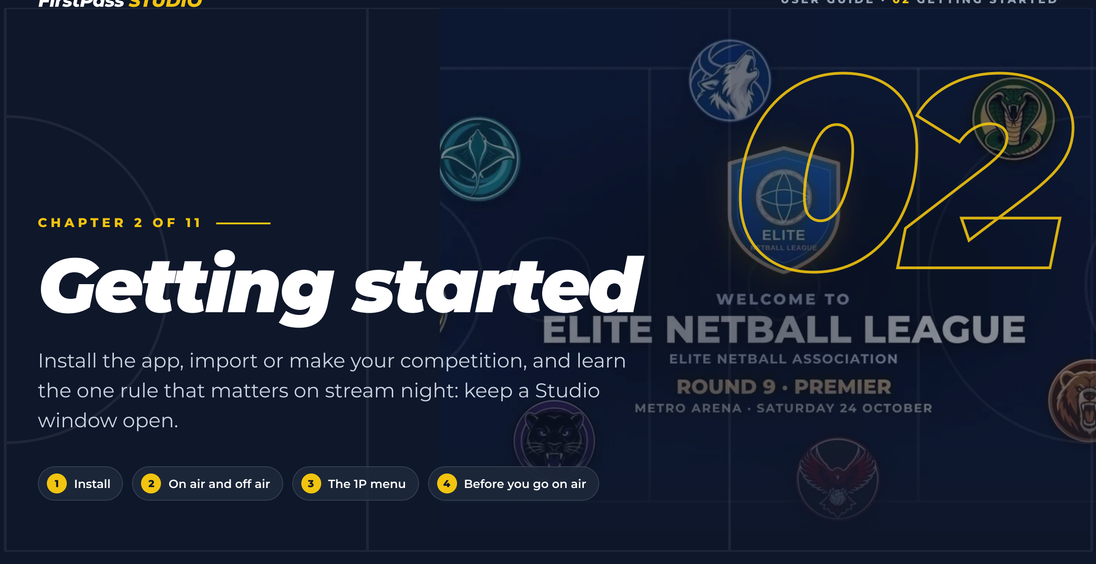

FIG 1.1 The bar on every page: the tabs grouped as Run, Plan and Set up, and the chips for the night: off air, the game on the board, PlayHQ with the quarter and clock, and what the run order plays next.

> ***Studio does one job on stream night: graphics.***
>
> CHAPTER 1 · WHAT STUDIO IS

1.3 The sample competition in this guide

The screenshots use a fictional league, the **Elite Netball League**, with eight clubs named after animals (Falcons, Panthers, Stingrays, Cobras, Grizzlies, Hawks, Rhinos and Wolves) across Premier, Men's and Under 21 divisions, playing at the Metro Arena. Its sponsors are fictional too. Everything you see is what Studio draws for any competition once its setup is in.

CHAPTER 2 OF 11

Getting started

Install the app, import or make your competition, and learn the one rule that matters on stream night: keep a Studio window open.

1 Install
2 On air and off air
3 The 1P menu
4 Before you go on air

2.1 Install

01

Download `FirstPass Studio.dmg`, drag the app to Applications and open it. It runs on Apple silicon Macs (M1 and later).

02

The **1P** icon appears in the menu bar, off air. Choose **Open Studio**. A short splash shows, Studio goes on air and the Output page opens in the app's own window.

03

Go to **Competitions setup** and either **Import a template file** (your league's `.json`, with its logos and sponsors inside) or **New competition** and fill it in (Chapter 6).

04

Back on **Output**, add the graphics you need with **Add page**, and turn on the video output that feeds your switcher (Chapter 3).

2.2 On air and off air

The pages zoom like Safari's, for a small screen: **Zoom In** (⌘+), **Zoom Out** (⌘−) and **Actual Size** (⌘⌥0) in the View menu, which shows the level, or a pinch on the trackpad. Every Studio window zooms together and the level is kept on that Mac; while it isn't 100% a chip at the right of the bar shows it, and a click on the chip puts it back. The Docs tab, this guide, has its contents at the left on a wide window.

Studio only runs while a Studio window is open. Opening one (Open Studio, any page in the 1P menu, or ⌘N) puts it on air; closing the last one takes it off air, and the graphics and Stream Deck get no answer until a window opens again. Closing the last window while on air asks first, and so does ⌘Q, so a stray keypress can't stop a stream. Leave the Output page open all night.

The bar's chips show the game on the board, whether PlayHQ is answering (amber when overdue, red after a minute of errors) and which outputs are on air, on every page; the Output page's status board shows the score and the rest of the night. If anything is wrong, the page you keep open says so.

2.3 The 1P menu

The 1P icon in the menu bar is Studio's home: it opens Studio, its pages and this guide, backs the settings up and restores them, and has **Open at login**, **Appearance** (the Studio pages follow the Mac's light or dark look unless pinned here; the graphics never change) and **Check for updates**. Chapter 10 lists every item. Updates download in the background and install when the app quits, never mid-stream.

LINKS Studio's links start with the Mac's Bonjour name, such as `http://matts-macbook-pro.local:8080/`, so the same link works from a phone, another computer or a Stream Deck on the same network. `http://localhost:8080` works on the Mac itself.

> ***The one rule that matters on stream night: keep a Studio window open.***

CHAPTER 2 · GETTING STARTED

2.4 Before you go on air

01

Open the app. The Output page opens and Studio goes on air. Keep a window open all night.

02

Right competition. Competitions setup shows the one in use at the top. Check its PlayHQ link and the scoring window, and that the Production Planner has tonight's court.

03

Right game. On Scoreboard control, the picked game is tonight's first on your court and Follow PlayHQ is on.

04

Scores arrive. Once the scorer has started on PlayHQ, the control page says the game is being live scored and the board moves. Nothing is read before the scoring window opens, so a quiet board before then is normal.

05

Scene and output. On Output, turn on the display, NDI or Blackmagic output your switcher takes, check fill and key or chroma, and show one graphic to see it land.

06

Sound. Play a few seconds of music and an animation with sound, and check the sound only comes out where you want it.

07

Stream Deck. Press a Source key and watch the Sources list follow it. A score key switches scoring to Manual, so put it back to Follow PlayHQ after testing.

08

Sponsors. Tonight's spots and ads are on; the sponsor report starts counting when the output turns on.

How it fits together

Control Panel

The Control Panel is the main screen you'll use during a game night. It's where you run the scoreboard, manage the Output page, and keep an eye on everything else. It's split into a few areas:

- **Header** — Shows the current game night and the Output page's status. Click the game night name to switch to a different one.
- **Navigation** — Switches between the Scoreboard, Output, Live, Layers, Scenes, Responsive, Mods, Playlists, Rules, Video output, Devices, Recordings, and Settings pages.
- **Main area** — Shows the page you've selected.
- **Footer** — Shows the Output page's resolution and frame rate, and the Live source's status.

Output page

The Output page is the video feed that viewers see. It's a separate window you can move to a second monitor or capture with OBS. Everything you do in the Control Panel — scores, layers, scenes — appears on the Output page.

Live source

The Live source is a virtual camera that sends the Output page into OBS, Discord, or any other app that can use a webcam. It's how you get the broadcast into your streaming software.

Layers

Layers are the graphics that sit on top of the Output page — lower thirds, scoreboards, alerts, and so on. You can show, hide, and arrange them from the Layers page.

Scenes

Scenes are saved arrangements of layers. Switch between them to change what's on screen — for example, a "Starting soon" scene before the game and a "Final score" scene after.

Responsive

Responsive lets you build layouts that adapt to different screen sizes and orientations, so the same graphics look right on a phone, a tablet, and a widescreen monitor.

Mods, playlists and rules

Mods add new games and features. Playlists queue up which game comes next. Rules automate things like switching scenes when a game starts.

Video output

Video output controls the resolution, frame rate, and quality of the Output page and the Live source.

Devices

Devices lets you connect hardware like controllers, cameras, and capture cards.

Recordings

Recordings saves a copy of the Output page to your computer.

> A sequence can start by itself from a schedule, a rule, or a playlist, and hand over to another sequence.

Scoreboard control

Scoreboard control

The Scoreboard page is where you run the game. It's split into two columns: the **Scoreboard** on the left, and the **Timer** and **Teams** on the right.

Scoreboard

The Scoreboard shows the current game and lets you change the score. Use the **Game** dropdown to pick which game you're playing. Each team has a row with a name and a score. Click the **+** and **−** buttons to adjust the score, or click the score itself to type a new value.

Timer

The Timer counts up or down during the game. Use the **Start**, **Pause**, and **Reset** buttons to control it. The **Mode** dropdown switches between counting up and counting down.

Teams

The Teams panel lets you rename teams and change their colours. Click a team name to edit it, or click the colour swatch to pick a new colour.

Keyboard shortcuts

You can control the scoreboard without touching the mouse. Press **Space** to start or pause the timer, **R** to reset it, and the **+** and **−** keys to adjust the score for the selected team.

The Output page

The Output page

The Output page is the video feed that viewers see. It's a separate window you can move to a second monitor or capture with OBS. Everything you do in the Control Panel appears on the Output page.

Resolution

The **Resolution** dropdown sets the size of the Output page. Common options are 1280×720 (HD), 1920×1080 (Full HD), and 3840×2160 (4K). Higher resolutions look sharper but use more bandwidth and processing power.

Frame rate

The **Frame rate** dropdown sets how many frames per second the Output page runs at. 30 fps is fine for most streams; 60 fps looks smoother but needs more power.

Background

The **Background** setting controls what's behind the layers. Choose a solid colour, a transparent background (for overlaying on top of your game capture), or an image.

Safe zone

The **Safe zone** overlay shows the area that will be visible on all screens. Anything outside it may be cut off on some displays. Turn it on while you're setting up layers.

Fullscreen

Click **Fullscreen** to make the Output page fill the screen. Press **Esc** to exit.

The Live source

The Live source

The Live source is a virtual camera that sends the Output page into OBS, Discord, or any other app that can use a webcam. It's how you get the broadcast into your streaming software.

Starting the Live source

Click **Start** to turn the Live source on. The status in the footer will change to show that it's running. Click **Stop** to turn it off.

Adding it in OBS

In OBS, add a new **Video Capture Device** source and choose the Live source from the list. The Output page will appear in your scene.

Adding it in Discord

In Discord, open **User Settings** → **Voice & Video** and choose the Live source as your camera. Your viewers will see the Output page in your call.

Troubleshooting

If the Live source doesn't appear in other apps, make sure it's started and that no other app is using it. Restarting the app usually fixes it.

Automatic layers

Automatic layers

Some layers show themselves automatically when something happens in the game. You don't have to do anything — they appear, play, and disappear on their own.

Super Shot

Super Shot appears when a player makes a long-range shot. It shows the player's name and the points they scored.

Hits the front

Hits the front appears when a player knocks down the front pin. It shows the player's name and a short message.

Turning automatic layers off

If you don't want an automatic layer to appear, open the **Layers** page and turn it off. It will stay off until you turn it back on.

Scenes

Scenes

Scenes are saved arrangements of layers. Switch between them to change what's on screen — for example, a "Starting soon" scene before the game and a "Final score" scene after.

Creating a scene

Click **New scene** in the **Scenes** panel. Give it a name and choose which layers should be visible in it.

Switching scenes

Click a scene in the list to switch to it. The Output page will change immediately.

Editing a scene

Click the **Edit** button next to a scene to change which layers are in it. You can also drag layers in the **Layers** page to reorder them within a scene.

Duplicating a scene

Click **Duplicate** to make a copy of a scene. This is useful when you want a similar scene with a few changes.

Deleting a scene

Click **Delete** to remove a scene. You'll be asked to confirm before it's gone.

Responsive

Responsive

Responsive lets you build layouts that adapt to different screen sizes and orientations, so the same graphics look right on a phone, a tablet, and a widescreen monitor.

Breakpoints

A breakpoint is a screen width where the layout changes. You can add as many breakpoints as you need. Common ones are 480px (phone), 768px (tablet), and 1280px (desktop).

Editing a layer

Click a layer in the list to edit it. Choose the breakpoint you want to edit from the **Breakpoint** dropdown, then change the layer's position, size, and visibility.

Hiding a layer

Turn off **Visible** for a layer at a breakpoint to hide it on screens that match that breakpoint. This is useful for hiding decorative layers on small screens.

Resetting

Click **Reset** to remove the changes you've made at the current breakpoint and go back to the default layout.

Mods, playlists and rules

Mods, playlists and rules

Mods add new games and features. Playlists queue up which game comes next. Rules automate things like switching scenes when a game starts.

Mods

Mods are add-ons that add new games, layers, or features. Open the **Mods** page to see what's installed. Click **Browse** to find more, or **Import** to install a mod from a file.

Playlists

A playlist is a queue of games. Create one on the **Playlists** page, add games to it, and the app will move through them in order. You can shuffle a playlist or loop it.

Rules

Rules run automatically when something happens. For example, a rule can switch to the "Final score" scene when the timer reaches zero. Create rules on the **Rules** page.

Sharing

You can share playlists and rules with other people. Click **Export** to save one to a file, and **Import** to load one that someone else made.

Video output

Video output

Video output controls the resolution, frame rate, and quality of the Output page and the Live source.

Resolution

The **Resolution** dropdown sets the size of the video. Common options are 1280×720 (HD), 1920×1080 (Full HD), and 3840×2160 (4K). Higher resolutions look sharper but use more bandwidth and processing power.

Frame rate

The **Frame rate** dropdown sets how many frames per second the video runs at. 30 fps is fine for most streams; 60 fps looks smoother but needs more power.

Quality

The **Quality** slider trades image quality for bandwidth. Lower it if your stream is dropping frames or your internet connection is slow.

Encoder

The **Encoder** dropdown chooses how the video is compressed. Hardware encoders (NVENC, AMF, Quick Sync) are faster and use less CPU; software encoders (x264) look better at the same bitrate.

Bitrate

The **Bitrate** is the amount of data sent per second. Higher bitrates look better but need a faster connection. Match it to what your platform recommends.

A night, start to finish

Before the night

Open the app and check that the Output page looks right. Set the resolution, frame rate, and background. Turn on the Live source and add it in OBS. Load the playlist you want to play.

Starting the night

Click **Start** on the first game in the playlist. The Output page will switch to it. Start the timer when the game begins.

During the night

Keep the Scoreboard page open on your second monitor. Update the score as the game goes. Switch scenes when you want to change what's on screen.

Between games

The playlist will move to the next game automatically. Use the time to check the score, swap out a player, or take a break.

Ending the night

Click **Stop** on the Live source. Stop the Recording if you're recording. Save the final score if you want to keep it.

Next time

Export your playlist and rules so you can share them with the group. Note anything that went wrong so you can fix it before the next night.

The Production Planner

The Production Planner

The Production Planner is a timeline for scheduling sequences ahead of time. Use it to plan a whole night in advance, then let it run on its own.

Timeline

The timeline shows the hours of the night across the top and your tracks down the side. Each sequence is a block on a track. Drag a block to move it, or drag its edges to change how long it runs.

Tracks

Tracks let you run sequences in parallel. For example, one track for the main game and another for background music. Add a track with **Add track**, and remove it with the track's menu.

Sequences

A sequence is a saved arrangement of layers, scenes, and timing. Create one by recording what you do, or build it by hand in the sequence editor.

Starting a sequence

Click a sequence block and choose **Start**, or set a time for it to start automatically. You can also start sequences from a playlist or a rule.

Handing over

When a sequence ends, it can hand over to another sequence. Set the **Next** field on the sequence to choose what comes after it.

Devices

Devices

Devices lets you connect hardware like controllers, cameras, and capture cards.

Controllers

Plug in a controller and it will appear in the **Controllers** list. Click it to see which buttons and sticks are working. You can map buttons to actions in the **Mapping** tab.

Cameras

Cameras shows any webcams you've plugged in. Click **Preview** to see what each one is showing.

Capture cards

Capture cards shows any capture cards you've plugged in. Choose one as the input for your stream.

Troubleshooting

If a device isn't showing up, try unplugging it and plugging it back in. Restarting the app usually fixes it.

Recordings

Recordings

Recordings saves a copy of the Output page to your computer. Use it to keep a record of your game nights or to edit highlights later.

Starting a recording

Click **Start recording** to begin. The recording will keep going until you click **Stop recording**.

Where recordings are saved

Recordings are saved to the folder you choose in the **Folder** setting. By default they go to your Videos folder.

Format

The **Format** dropdown chooses the file type. MP4 is the most compatible; MKV is safer if your recording might crash.

Quality

The **Quality** setting trades file size for image quality. Higher quality means bigger files.

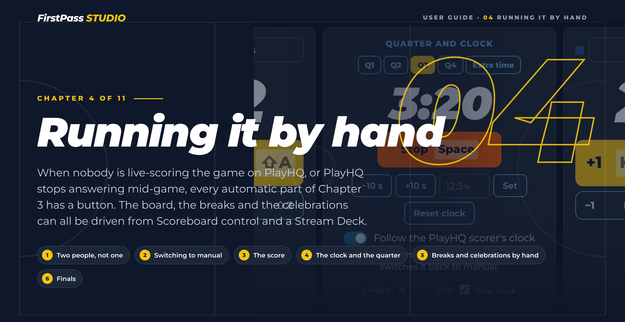

Disk space

Recordings can use a lot of disk space. Check the free space shown on the page before you start a long recording.

CHAPTER 4 OF 11

Running it by hand

When nobody is live-scoring the game on PlayHQ, or PlayHQ stops answering mid-game, every automatic part of Chapter 3 has a button. The board, the breaks and the celebrations can all be driven from Scoreboard control and a Stream Deck.

1 Two people, not one · 2 Switching to manual · 3 The score · 4 The clock and the quarter · 5 Breaks and celebrations by hand · 6 Finals

Studio still needs the competition on PlayHQ for its fixture, ladder, squads and results; what changes in manual mode is who runs the score and the clock. The same competition can be followed one week and run by hand the next, and nothing on the Output page changes between the two.

4.1 Two people, not one

A followed game can be run by one person because the score, the clock and the breaks take care of themselves. A game run by hand is a different job: someone has to press a key for every goal within a second or two of it, start and stop the clock with the umpire's whistle, and still call the breaks and the graphics. We recommend two people share it:

Camera operator

- Frames and follows play on the cameras, and cuts between them on the switcher.
- Runs the game clock from the whistle, with **Start / Stop** and **Reset clock** keys beside the camera controls.
- Scores the goals as they go in, **+1** or **+2**, because they are already watching the ring.
- Nothing else: no graphics, no breaks, no music.

Production manager

- Keeps the Output page open and watches the stream itself, not the court.
- Corrects the score (**−1**, **−2**) and the quarter, and sets the clock when it drifts from the venue's.
- Plays the run-up, break and full time sequences from their keys, and the lower thirds, ladders and stats during play.
- Runs the music, the sponsor ads and the end of night, and picks the finals winners.

If one person must do it alone, keep the Stream Deck to the score and clock keys and let the sequences do the breaks, exactly as they do in automated mode: the game triggers follow the scoreboard's clock whoever runs it.

> **If one person must do it alone, keep the Stream Deck to the score and clock keys and let the sequences do the breaks.**
>
> CHAPTER 4 · RUNNING IT BY HAND

4.2 Switching to manual

Press **Manual** on Scoreboard control, or just press any score key: either switches the board to manual scoring and stops following the PlayHQ clock as well. Press **Follow PlayHQ** to go back; the score catches up with PlayHQ on the next check and the clock follows the scorer's again.

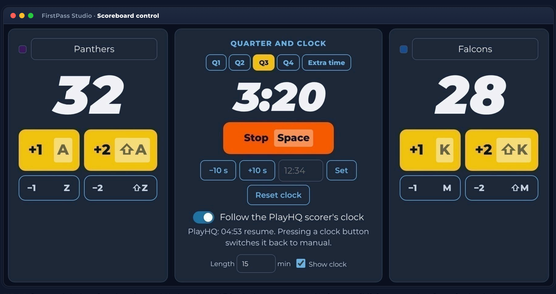

FIG 4.1 Score and clock on Scoreboard control. Keyboard: A and Z for the home team, K and M for away, Shift for a super shot, Space for the clock.

WHEN PLAYHQ DROPS OUT

If PlayHQ stops answering during a followed game, the scoreboard keeps its last score, the ladder, fixtures and game list keep what they last read, and the debug log records each failed read. Switch to Manual and run the board by hand; Follow PlayHQ picks it up again when PlayHQ is back, and corrects the score to the scorer's.

4.3 The score

Each team has **+1**, **+2**, **−1** and **−2**. A +2 is a super shot: it scores two and plays the super shot celebration, so a +2 pressed by mistake is fixed with −2 (which plays nothing). **Reset scores to 0** clears both. The hot streaks and game moments still play in manual mode, because Studio works out the goal order from the presses just as it does from PlayHQ's score.

KEY	WHAT IT DOES
Home +1 / Away +1	A goal.
Home +2 / Away +2	A super shot: two points and the celebration.
−1, −2	Take a goal or a super shot back, quietly.
Reset scores to 0	Both scores to zero, for the next game.
Super shot (home / away)	The celebration only, score unchanged: for a test, or a super shot that was scored as +1 +1.

4.4 The clock and the quarter

Start and **Stop** are one key on the Stream Deck. **Reset clock** puts a full quarter back (the competition's quarter length; a key can set any time). **+10 s** and **−10 s** nudge it, and a key can add or take off any amount. Type the venue's clock in **Match venue clock** to line the two up, and untick **Show clock** for a game with no reliable clock at all. Quarters are **Q1** to **Q4** plus extra time, or H1 and H2 for a competition played in halves; **Next quarter** steps through them. Changing the quarter doesn't touch the clock, so make the quarter key a Stream Deck Multi Action that also resets the clock.

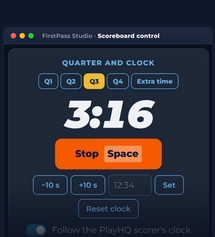

FIG 4.2 Quarter and clock. The super shot tab, the super shot song and the break sequences all read this clock, so they work by hand as they do when following PlayHQ.

4.5 Breaks and celebrations by hand

A sequence that starts by itself at quarter time is started by its key too, so the production manager can run **Quarter time** the moment the siren goes instead of waiting for the clock, or run **Half time** early when a game is called. **Next**, **Pause** and **Stop** work on whatever is playing, and **Automatic sequences on** on the Output page can be unticked for a night where every break is called by hand.

- **Winner.** One key. The celebration reads the board's score when it comes on, so it covers a home win, an away win and a draw. Check the score first. A source with **Result** set to home, away or draw forces it.
- **Super shot and streaks, once.** Besides the automatic sources, a Super shot source set to **Plays: home** or **away**, or a Hot streaks source set to one streak, plays once each time it is turned on. Don't keep a manual source and the automatic one on together, or it plays twice.
- **The Clash.** A pre-game animation, played from its key or as a step in the walk-out sequence, with the two teams, their logos and club colours.
- **Lower thirds.** The person lower third's name box on the Output page suggests the competition's athletes; type a guest's name and title for a commentator or an official. Turn it on when they appear and off a few seconds later.
- **Stats during play.** The ladder lower third, shooting stats, last 10 goals and match up are all Source keys. Each loads fresh when shown, so it has the latest numbers.

4.6 Finals

FIG 4.3 Finals on Scoreboard control. The format for each division is set on the Competitions setup page, and the teams come from the ladder.

PlayHQ often has no finals fixtures until the day. In **Finals** on Scoreboard control, pick the division, then pick each game's winner (the score is optional) as the finals are played; the finals graphic and the ladder's finals key move on with each pick. A result from PlayHQ, when it has one, always wins over one picked here.

CHAPTER 5 OF 11

The graphics

Every great Court Sider knows, graphics are what's in store. Each one is unique and tailored to the game. Add pages and templates and options appear as fields where to add information. Fields and options named here are the ones worth knowing.

- Always on
- Before the game
- During play
- After the game
- The competition
- The breaks
- Finishing the analysis

5.1 Always on ... 3
5.2 Before the game ... 4
5.3 During play ... 6

5.1 Always on

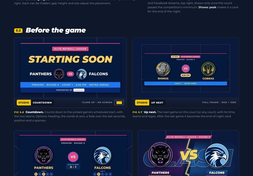

SCORE SCOREBOARD

FG 5.1 **Scoreboard.** Shown (Playtv?) come to it, or the one typical for Scoreboard control, both teams with their logos. Scores, timer, and quarter. Timer counts down from 15:00 and pauses at quarter breaks. Options position them.

SCORE SCORE TICKER

FG 5.2 **Score ticker.** The score from tonight's other games scrolling along the bottom. Scoring can be turned off for a game, and the ticker will pause. Speed from the control page or settings. Also available as a top-edge variant in the top.

SCORE RECORDING LOGO

FG 5.3 **Recording logo.** Shows YouTube's live dot with an on-time clock, the corresponding live logo light. Each can be hidden, plus height and size adjust the placement.

SCORE VIEWERS

FG 5.4 **Viewers.** The watching? Viewers on the platform, the Court and Facebook Stream by live light. Shows and updates every 30 seconds. Options position and hide. **Stream code** enters it to pull its live one of the night.

5.2 Before the game

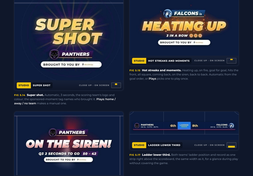

SCORE STARTING SOON

FG 5.5 **Starting soon.** Is a short, to-the-point countdown, with the two teams, Options heading, the words at once, a fade over the last seconds, position and options.

SCORE MATCH UP

FG 5.6 **Match up.** Is a side-by-side by-side with their last five results, and this season's head-to-head. **Form** and **Head to head** are each the toggles.

SCORE PANTHERS WATCH ME

FG 5.7 **Panthers watch me.** Is a short, to-the-point countdown, with the two attributes athletes from the entrance page or a silhouette. Options position and hide. Name or image plays with GS or GA and the starting day. Animate away at the end.

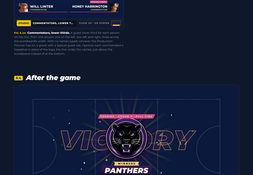

SCORE TEAM LIST

FG 5.8 **Team list.** The layout of the up from. Positions and options, custom and hide fill, and head-to-head by Form the Head to head. Options position and hide.

SCORE NEXT AND AFTER

FG 5.9 **Next and after.** Shows what's coming up next, after this or Following, with the recent's teams and before a message title. Options style, opens from a distance. Position and hide. Following with the following with starting at current record effects. Settings here.

5.3 During play

SCORE SUPER SHOT

FG 5.10 **Super shot.** Automatic, if override, the scoring team's logo and name, and the words "Super Shot" and "Super Shot" and "Super Shot" and "Super Shot" away / for team / select a team.

SCORE HEATING UP

FG 5.11 **Heating up.** Quick, super shots and attempts per shooter from Heating up. Options position and hide. Name and the streaking. Position Options, on/off, and a colour. Options position and hide.

SCORE ON THE SIREN

FG 5.12 **On the siren.** Is on the last seconds of a quarter. Hilarious on the siren. Options position and hide. Last scoring when you may see the scorers. Through to you to "up."

SCORE LAST 10 GOALS

FG 5.13 **Last 10 goals.** Shows the last 10 goals scored by each team. Options position and hide. Last scoring when you may see the scorers. Through to you to "up."

SCORE PLAYER LOWER THIRD, STA...

FG 5.14 **Player lower third, STATS.** Shows the player's name, position, and photo. Options position and hide. Last scoring when you may see the scorers. Through to you to "up."

SCORE COMMENTATORS, THIS LINE

FG 5.15 **Commentators, this line.** Shows the commentators' names. Options position and hide. Last scoring when you may see the scorers. Through to you to "up."

SCORE COMMENTATOR, LOWER T...

FG 5.16 **Commentators, lower thirds.** A quick lower-thirds for each commentator. Options position and hide. Last scoring when you may see the scorers. Through to you to "up."

SCORE COMMENTATORS, THIS LINE

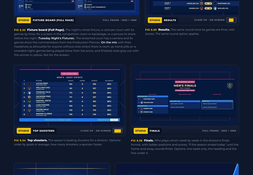

FG 5.17 **Commentators, this line.** Shows the commentators' names. Options position and hide. Last scoring when you may see the scorers. Through to you to "up."

SCORE COMMENTATORS, ADD...

FG 5.18 **Commentators, bio.** Is a name and an upper-third in the top-left corner. Options position and hide. Last scoring when you may see the scorers. Through to you to "up."

SCORE FULL TIME

FG 5.19 **Full time.** The final scores from Pantheon and each team's top shooters and shooting percentages. Options position and hide. **Awarding** takes a Position and Field.

SCORE SCORE WORM

FG 5.20 **Score worm.** The manager through the game as it flies, shown in over-time. Options position and hide. Name the club colour or the competition.

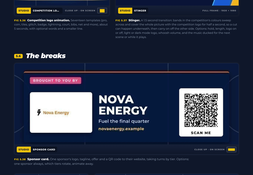

SCORE GAME STATS

FG 5.21 **Game stats.** The score by quarter, clocked by 15:00 and pauses at quarter breaks. Options position and hide. Last scoring when you may see the scorers. Through to you to "up."

SCORE MVP RACE

FG 5.22 **End of night.** Is a MVP race and the final for the scoring. Options position and hide. Last scoring when you may see the scorers. Through to you to "up."

5.4 After the game

SCORE WINNER

FG 5.23 **Winner.** The winning team, logo, final score and a big send. walked out from the board each time it comes on. Options focus, colour, the word, the text under the score, and the logo.

SCORE FULL TIME

SCORE GAME STATS

SCORE MVP RACE

SCORE SCORE WORM

SCORE END OF NIGHT

5.5 The competition

SCORE LADDER

FG 5.24 **Ladder.** The division's ladder with the hues places marked and a top. Leader is favoured. Options hide and go off. Add and hide hues logo.

SCORE FIXTURE ROUND (FULL PAGE)

SCORE FIXTURE ROUND

FG 5.25 **Fixture round (full page).** The ladder, some fixtures and last round. Add the options. Options position and hide. Add and hide hues logo. Add and hide hues logo.

SCORE TONIGHT'S FIXTURES

FG 5.26 **Tonight's fixtures.** Shows tonight's fixtures and their venues. Options position and hide. Add and hide hues logo. Add and hide hues logo.

SCORE ROUND 5 RESULTS

FG 5.27 **Results.** Shows the scores from the games one from each. Options position and hide. Add and hide hues logo. Add and hide hues logo.

SCORE COMPETITION LAD...

SCORE STANDS

FG 5.28 **Competition lad...** Shows the competition's ladder. Options position and hide. Add and hide hues logo. Add and hide hues logo.

FG 5.29 **Stands.** Shows where each team is on the competition's colours scheme. Options position and hide. Add and hide hues logo. Add and hide hues logo.

SCORE TOP SHOOTERS

FG 5.30 **Top shooters.** Shows the leaders in the competition, with the shooters, a slide-by value of average. How many shooters, a spread fields.

SCORE FINALS

FG 5.31 **Finals.** Shows the finals series, with the competition's colours scheme. Options position and hide. Add and hide hues logo. Add and hide hues logo.

5.6 The breaks

SCORE ANSWER CARD

FG 5.32 **Sponsor card.** Is a sponsor's logo, tagline, offer, and a QR code to their website, lasting long for 15+ Options and position and hide. Add and hide hues logo.

SCORE PIVT ON FIRSTPASS STUDIO 60

FG 5.33 **PIVT and FirstPass Studio 60.** Is a sponsor's logo, tagline, offer, and a QR code to their website, lasting for 15+ Options and position and hide. Add and hide hues logo.

5.7 Checking the outputs

SCORE OUT SECTIONS

FG 5.34 **Test pattern.** Shows the key, arrows and shift shapes. Options position and hide. Add and hide hues logo. Add and hide hues logo.

CHAPTER 6 OF 11

06 Competitions setup

Everything about a competition that doesn't come from PlayHQ lives on one page: its PlayHQ link, the names on the graphics, the game rules, finals, game day, colours, font and logos. Set it up once a season and every graphic follows.

COLOURS AND FONT
#3A1758
#FFFFFF

CHAPTER 7 OF 11

Sponsors

The Sponsors tab turns sponsorship into something you can sell, run and prove: a tiered library of sponsors, spots on the graphics that fill themselves, ad breaks that take turns fairly, and a report of what each sponsor got.

1 Tiers · 2 A sponsor · 3 Spots and moments · 4 Proof of play

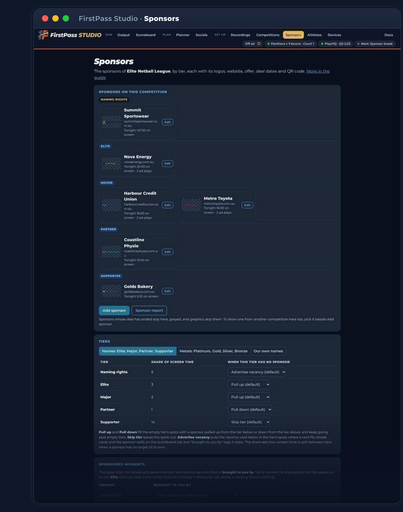

FIG 7.1

The Sponsors page for the sample league: sponsors by tier with tonight's exposure meter, the tier rules, sponsored moments and the vacancy card.

7.1 Tiers

Five fixed ranks, named per competition: the **Names** preset (Naming rights, Elite, Major, Partner, Supporter), the **Metals** preset (Naming rights, Platinum, Gold, Silver, Bronze) or your own. Each tier's **share of screen time** decides how turns are split when a sponsor has no target of its own. Each tier gets different places:

TIER	WHERE IT SHOWS
Naming rights	A tab on the scoreboard, under the title banner, first on the sponsor wall, and everything below.
Elite	The sponsored moments (super shot, streaks), ads in the breaks, the break card, and everything below.
Major	Ads and break cards, "presented by" footers on the stats cards, countdown and top shooters.
Partner	A slot in the score ticker and the logo spots.
Supporter	The sponsor wall and the end-of-night strip.

When this tier has no sponsor says what a spot does when its tier is empty: **Pull up** fills it from the tier below, **Pull down** from the tier above, **Skip tier** leaves it out, and **Advertise vacancy** shows the competition's vacancy card wherever a card fits. The vacancy card has a heading, a contact, a message and a link or email for its QR code, so an empty tier finds its own sponsor.

> **The vacancy card has a heading, a contact, a message and a link or email for its QR code, so an empty tier finds its own sponsor.**
>
> CHAPTER 7 · SPONSORS

7.2 A sponsor

A sponsor has a name, tagline, website, offer, brand colour, category, deal dates, and optional targets per stream (minutes on screen, ad plays). Category keeps competing sponsors apart in rotation. Add a colour logo and a white one for dark panels (without a white one, the colour logo is made white). A sponsor is kept once and can be **shown on** several competitions at its own tier in each; sponsors whose deal has ended stay greyed and the graphics skip them.

Ads are videos or stills (up to 10 per sponsor) in the media folder. A **Sponsor ads** step in a sequence plays the next ads due, taking turns fairly by tier, each video to its end with sound and each still for its seconds; tick **House ad** and the PIVT and FirstPass Studio ad plays when nothing is due. The **QR code** points to the sponsor's website with tracking tags, so visits from the stream show in their analytics; save it as a PNG for the sponsor's own use.

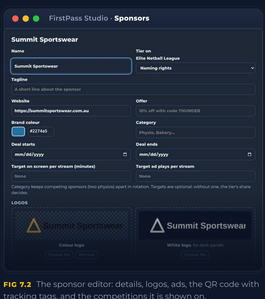

FIG 7.2 The sponsor editor: details, logos, ads, the QR code with tracking tags, and the competitions it is shown on.

7.3 Spots and moments

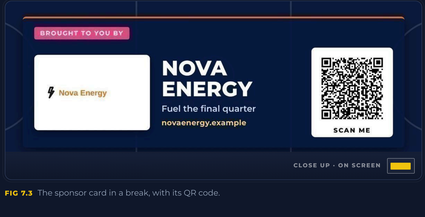

FIG 7.3 The sponsor card in a break, with its QR code.

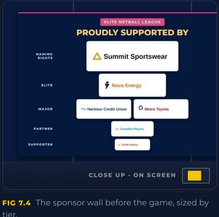

FIG 7.4 The sponsor wall before the game, sized by tier.

Every spot picks its sponsor from the Sponsors page by default. Each graphic's **Sponsor** option can pin one sponsor or turn the spot off. **Sponsored moments** sells the super shot, each hot streak and each game moment to one sponsor for the season, whose name appears in a "brought to you by" tag on the animation; by default the Elite sponsors take turns.

7.4 Proof of play

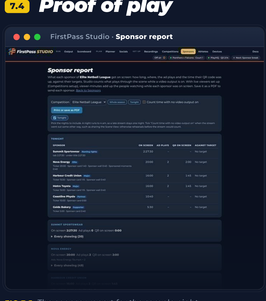

FIG 7.5 The sponsor report for the sample night.

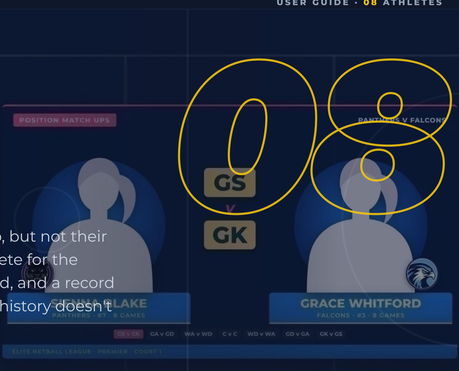

While a video output is on, Studio logs every second each sponsor is on screen and every ad played, matched to the scene's sources, and reads the live viewer count every 30 seconds. **Sponsor report** turns that into a page per night (or a run of nights) with minutes on screen, ad plays, viewer-minutes, peak and average viewers per sponsor, ready to print or save as a PDF for the sponsor. A tick box counts time with no video output on, for a rehearsal. With more than one output, only Output 1 and outputs with **Counts for sponsors** ticked are counted, and each counts as on air only while it's on: an output set to **Web links only** is off.

CHAPTER 8 OF 11

Athletes

PlayHQ gives Studio every athlete in a line-up, but not their faces. The Athletes tab holds a photo per athlete for the position match ups and the person lower third, and a record of positions and games played that PlayHQ's history doesn't cover.

1. Photos
2. Positions and games played

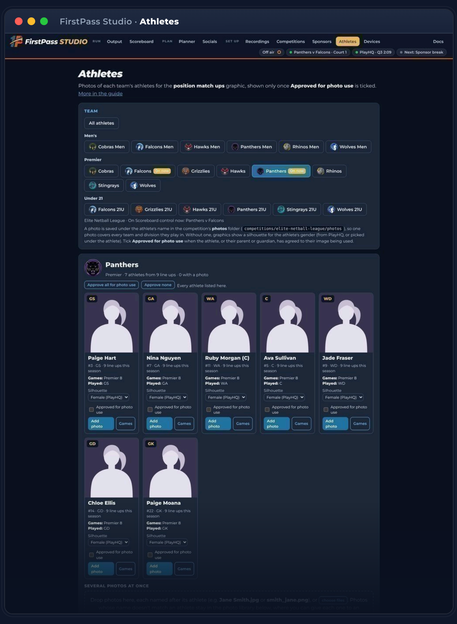

FIG 8.1

The Athletes page: teams grouped by division, every athlete PlayHQ has in a line-up this season, and the photo library.

8.1 Photos

Pick a team and add a photo to each athlete, or drop a folder of photos named after the athletes ("Jane Smith.jpg" or "smith_jane.png") on **Several photos at once**; any that don't match wait in the photo library to be given to someone. A photo is saved under the athlete's name for the competition, so an athlete in two divisions needs one photo. Studio also remembers each athlete's PlayHQ id, so if PlayHQ changes a player's name during the season, their photo still finds them. Photos are made smaller when saved; cut-out PNGs with a transparent background look best. Without a photo the graphics show a silhouette for the athlete's gender, taken from the division (men's, women's; mixed and open are neutral) and changeable under the athlete. **An athlete PlayHQ doesn't list yet** adds one ahead of their first game.

A photo only goes on the stream and the Socials pictures once **Approved for photo use** is ticked under the athlete. Tick it when the athlete, or their parent or guardian, has agreed to their image being used. Until then the graphics show the silhouette. **Approve all for photo use** ticks every athlete listed for the team at once.

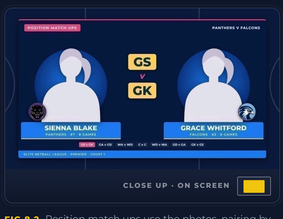

FIG 8.2 Position match ups use the photos, pairing by pairing.

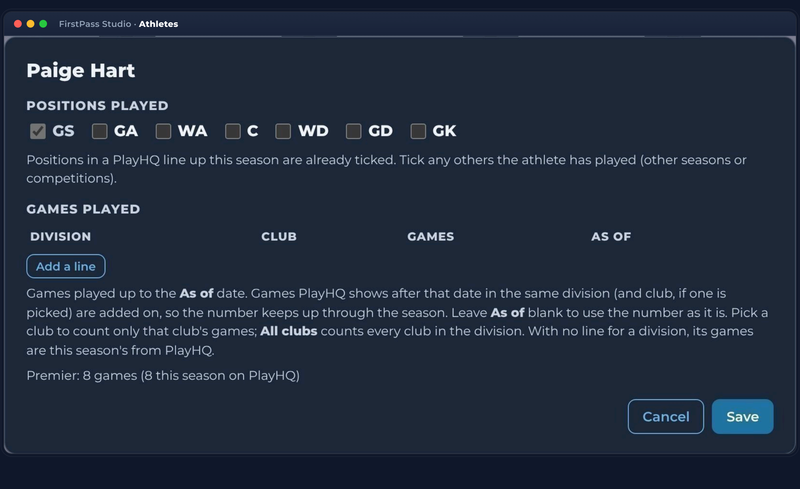

FIG 8.3 The athlete lower third, named from the register as you type on the Output page.

> ***A photo is saved under the athlete's name for the competition, so an athlete in two divisions needs one photo.***
>
> CHAPTER 8 · ATHLETES

8.2 Positions and games played

Games under an athlete opens their record. Positions played in a PlayHQ line-up this season are ticked already; tick any others from other seasons or competitions. Games played takes a line per division (and club): the number as of a date, to which Studio adds the games PlayHQ shows after it, so milestones keep up through the season. With no line, a division's games are this season's from PlayHQ.

CHAPTER 9 OF 11

Stream Deck

A Stream Deck is the control surface for stream night: one key per source, scene and sequence, each lit while it's on, plus score, clock and quarter keys for a game run by hand. Studio ships its own plugin, and every control also has a plain link. It all lives on the **Devices** tab, under the list of devices allowed to change things (Stream Decks and their link sets, paired phones and programs), which is also where **Devices** in the menu bar icon goes.

1 The plugin · 2 Links for everything else · 3 Timed keys and the icon pack

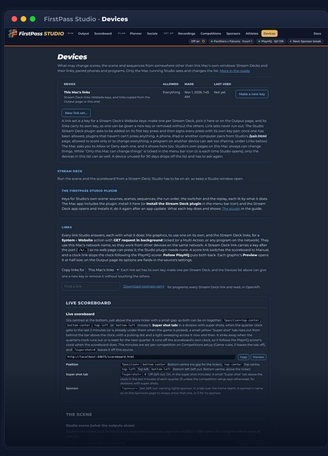

FIG 9.1

The Devices tab: the devices allowed to change things at the top, then the plugin, then Links: every link Studio answers, each with what it does, Copy and its settings.

9.1 The plugin

Install it from the 1P menu (**Install the Stream Deck plugin**) or the button on the Output page; the Stream Deck app opens and installs it. Do the same after an app update. The **Studio** field in a key's settings stays empty when the Stream Deck is on the same Mac; for another Mac, type its address, like `http://studio-mac.local:8080`. Each kind of key has its own colour and picture, so you can see what a key does at a glance. The numbered disc in the top right corner shows which output it acts on, in that output's colour.

KEY	LOOKS	PRESS	SHOWS
Source	Teal, an eye (pink with a speaker for video sound)	Show or hide (default), fade in, fade out, refresh the page or restart the video, video sound on or off	The source's name; lit while it's on, however it was turned on
Scene	Blue, stacked layers	Go to a scene, next or previous scene, or back to the current scene as saved	Lit while its scene is on, with a yellow dot when sources have changed since
Sequence	Purple, a film strip	Play or stop a sequence, play from the first step, or Next, Next when waiting, Pause and Stop for whatever is playing	Step and time left, like **3/5 0:12**, the whole sequence's time, both or none; **in 0:04** when one is about to start by itself
Run order	Yellow, a numbered list	Play next (default), skip what's next, load a saved order, clear the list	What plays next, like **Play next ▶ / Quarter break / +2 more**; lit while something is queued, **empty** when nothing is; a Load key names its order and how many items it holds
Switcher	Red, a camera; no disc	A camera to preview (default) or program, stinger to a camera, Cut, Auto, an upstream or downstream key, Fade to black, run a macro	The camera's name from the switcher; red on program and green on preview, a key or Fade to black red while on air, a yellow dot while the switcher isn't answering
Replay	Grey, a replay arrow; no disc	Play or pause, next or previous moment, nudge, stop the 4K replay or practice game running	What it acts on (**4K replay**, **Practice**, **Demo**); lit while one runs

Keys follow their source, scene or sequence by id, so renaming on the Output page doesn't break them; a removed one says **gone**, and while Studio is off air they say **off air**.

With more than one output, each key has an **Output** setting: the output it shows a source on, plays a scene on or plays a sequence on (a Switcher key has none: there is one switcher). Its disc shows the output's number in its colour (Output 1 orange, 2 pink, 3 blue, 4 green, as on the Output page), so two keys for the same source on different outputs can't be mixed up. A key for a removed output loses its disc and says **no output**.

> ***Keys follow their source, scene or sequence by id, so renaming on the Output page doesn't break them.***
>
> CHAPTER 9 · STREAM DECK

9.2 Links for everything else

Every control is also a link, for a **System > Website** action (tick **GET request in background**), a Multi Action, or any program on the network. Scoreboard control, the Output page and the Devices tab copy them, with this Mac's Stream Deck key after the port (`…:8080/k/key/deck/…`) so no web page can press them. The Studio plugin needs no key: the first time you press one of its keys the Mac asks you to **Allow** it, and from then on it signs every press with its own key pair. A link without it is refused, so copy any older Website keys' links again from Studio. With more than one Stream Deck, give each its own link set: pick **New link set…** in **Copy links for** on the Devices tab, name it after the Stream Deck, and copy its links from there. If a link gets out, choose **Devices** in the menu bar icon and press **Make a new key** on that set: its links stop working and you copy them again, while the other Stream Decks carry on. A program on another computer can ask for a key of its own: the Mac asks you to **Allow** or **Deny** it by name and address, and Devices can take that one away without touching your other keys. The Devices tab lists every one under **Links**, with what it does, the settings it takes and **Copy**; **Find** narrows the list, a graphic has **Preview** and a status read has **Try**. The useful ones:

GROUP	LINKS
Scores	Home and away +1, +2, −1, −2; reset to 0; play a super shot or any streak without changing the score.
Scoring mode	Follow PlayHQ, Manual, toggle. Any score key switches to Manual.
Clock	Start, stop, toggle, reset, set to a time, add or take off any amount, follow the PlayHQ clock on or off, quarter length.
Quarter	Q1 to Q4, extra time, next, previous. The clock is separate; pair them in a Multi Action.
Game	Automatic selection on, off, toggle; the court to follow.
Ticker	Faster, slower, normal, a set speed.
Sources	Show, hide, toggle, restart, video sound; every source out; video output on or off.
Scenes	Go to a scene, next, previous, back to the scene as saved.
Sequences	Play, toggle, next, advance (only when waiting), pause, stop, start the one about to start now, cancel it, automatic sequences on or off.
Run order	Play what's next, skip it, clear the list, add a sequence or scene, load a saved order.
Music	Play, pause, resume, stop, fade out, next, previous, load a song or playlist, mute, duck; add `?fade=2` for a 2-second fade.
Sponsors	Play the next sponsor ad due.
Switcher	Cut, auto, stinger (to a camera or what's on preview), fade to black, a camera to preview or program, an upstream or downstream key on, off or toggled, run a macro.

A LAYOUT THAT WORKS Put the scene keys in a row across the top (Pre-game, Live game, Clear), the sequence keys under them with Next when waiting and Stop at the end, and a page of Source keys for the lower thirds and stats. A game run by hand gets a second page: home scores left, away scores right, the clock and quarter keys down the middle.

9.3 Timed keys and the icon pack

A second plugin, **Timed Sequence**, arms a key for a time of day and then presses a list of links with delays between them: reset the board at 18:55 and start the clock at 19:00, say. It is built from the repository. The **FirstPass Studio Characters** icon pack gives Stream Deck keys letters, numbers and symbols in the Studio style, for labelling keys by hand.

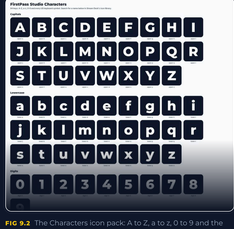

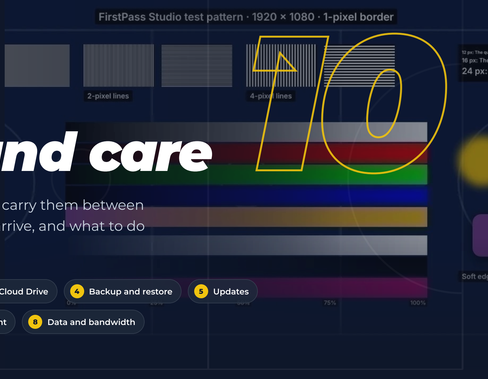

FIG 9.2 The Characters icon pack: A to Z, a to z, 0 to 9 and the usual symbols on navy.

CHAPTER 10 OF 11

Settings and care

Where Studio keeps its settings, how to carry them between Macs and back them up, how updates arrive, and what to do when something isn't right.

1 The 1P menu · 2 The data folder · 3 Settings in iCloud Drive · 4 Backup and restore · 5 Updates · 6 Links and other devices · 7 When something isn't right · 8 Data and bandwidth

10.1 The 1P menu

The menu bar icon is Studio's home. From top to bottom: the version and whether Studio is on air; **Stop Studio** (while on air); **Open Studio**, Scoreboard control, Competition setup and **Copy the Studio link**; **Devices**; **User guide**; **Install the Stream Deck plugin**; **Open the settings folder**, **Settings folder** (iCloud), **Back up...** and **Restore...**; **Open the debug log**, **Open the app log**, **Restart Studio**, **Check for updates**; **Open at login**, **Appearance** (Follow the Mac, Light, Dark), **Only this Mac can change things**, **What's new...** and Quit.

This guide comes with Studio: **User guide** in the menu bar icon, **Help > FirstPass Studio User Guide** while a Studio window is in front open it in a window of its own, and it is the **Docs** tab (⌘0) in any Studio window, with no internet needed. Phones and other computers on the network can read it too, at the Studio link with `/guide/` on the end.

10.2 The data folder

Everything Studio saves lives in one folder outside the app, `~/Library/Application Support/FirstPass Studio`, so updates never touch it. In it: **competitions/** (a folder per competition with its settings, logos, font, athlete photos and register), **sponsors/**, the scene, sequences, music and playlists, the **media** folder, **control.json** (Scoreboard control's choices), **scoreboard-state.json** (the game, scores and clock, saved every few seconds so a restart mid-game loses nothing), **config.json** for this Mac's own settings, **logs/** and **backups/**.

10.3 Settings in iCloud Drive

Settings folder > Move to iCloud Drive... moves the settings into a folder you choose in iCloud Drive, in a subfolder named after this Mac, so each Mac on the same Apple account keeps its own and none saves over another's. The debug log, scores and clock, caches and window positions always stay on the Mac. **Restore from another Mac...** copies another Mac's settings over this one's (competitions, scenes, sequences, music, control choices), backing this Mac's up first. **Move back to this Mac...** undoes the move. Studio goes off air for a moment for each and comes straight back.

10.4 Backup and restore

Back up... saves every setting in one zip named with the date and time, with notes you type and, if you choose, the media folder; beside it goes a text summary listing the competitions, sequences, playlists, sources, scenes and sponsors inside. **Restore...** shows when and where a backup was made and what it holds, backs up this Mac's settings first, and replaces them only once the whole zip has unpacked and checked out. This Mac keeps its own **Only this Mac can change things** choice, port and link name whatever the backup says. Make a backup after setting up a season and before trying anything new on the Output page.

10.5 Updates

Updates download by themselves and install when the app quits, never mid-stream; **Check for updates** looks now, and **Restart to update** appears when one is ready. If a newer version has come out since that one downloaded, it asks whether to get the newer one first or install the one it named. The first launch after an update shows **What's new**, the changes since the version you last opened. When an update changes how settings are saved, Studio backs the data folder up to **backups/** first; settings saved by a newer Studio open read-only in an older one.

> **Updates download by themselves and install when the app quits, never mid-stream.**
>
> CHAPTER 10 · SETTINGS AND CARE

10.6 Links and other devices

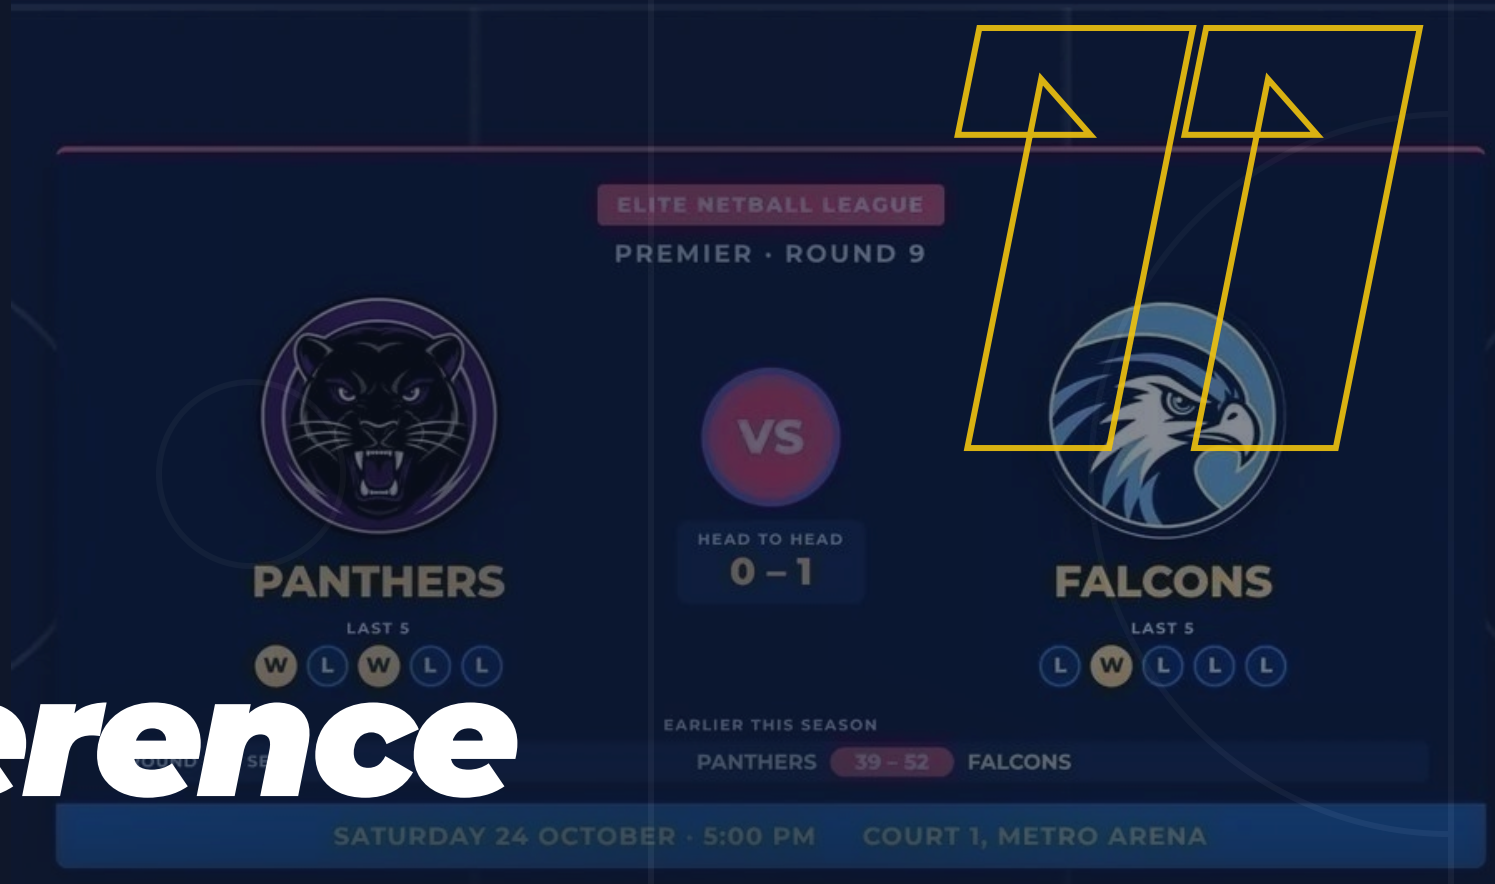

Studio's links use this Mac's Bonjour name (the Local hostname in System Settings > General > Sharing), so the same link works from a phone, another computer or a Stream Deck on the network; `localhost` still works on the Mac. Anything on the network can open the graphics. Only this Mac can change scores, the scene, sequences and settings: **Only this Mac can change things** is ticked every time Studio opens. To score from a phone or let another computer drive, pair it instead: open `/pair.html` on it (the Studio link with `/pair.html` on the end), type a name and press **Ask the Mac**, then choose **Allow scoring only** or **Allow everything** on the Mac. A paired device works with the box ticked, and **Devices** in the menu bar icon lists it, changes what it may do, or removes it. Unticking the box lets every device on the network in until Studio quits; keep that for emergencies. On a network you don't control, leave it ticked, or block incoming connections to FirstPass Studio in the Mac's firewall.

10.7 When something isn't right

WHAT YOU SEE	WHAT TO DO
The board doesn't move before the game	Normal: nothing is read before the electronic scoring window opens. Scoreboard control says when it will start checking.
The board stops mid-game	PlayHQ isn't answering. Switch to Manual and run it by hand; Follow PlayHQ picks it up again when PlayHQ is back.
The wrong night or game is on	Pick the game night on Scoreboard control and pick the game; tick automatic selection again afterwards.
A key says off air	No Studio window is open. Open Studio from the 1P menu.
A graphic looks stale	Press its Restart key or turn it off and on; with **Load the page fresh** on it reloads each time.
Studio itself stops	**Restart Studio** in the 1P menu brings it back with the scores and clock it had.
Anything else	**Open the debug log** in the 1P menu. Everything Studio does and every PlayHQ answer is in it, 15 MB at most. Send it with a note of the time.

10.8 Data and bandwidth

The graphics only ever talk to Studio on the Mac. Studio alone contacts PlayHQ: one small request every 5 seconds for the followed game (or as set, down to one a second), the ticker's other courts every 30 seconds, the fixture about once a minute for automatic selection, and the rest once when a graphic loads. The Production Planner and the Socials tab read the same fixture, results and ladders through the same cache, and finished games' line ups once, so they add nothing; the Fixture board reads other courts' live scores the ticker's way, so it adds nothing while the ticker is on and at most one request a minute per live game when it isn't. Commentator stats' auto-refresh asks Studio only; its team lists are read at the start and at each quarter break. Finished games are read once and kept. Extra outputs read the same data from Studio, so they add nothing here. It all comes to well under a megabyte an hour, so a phone hotspot is enough for Studio; the stream itself is the bandwidth. The PlayHQ line above the score on the Output page's status board shows it live: the ping, the bandwidth over the last minute and the data downloaded since Studio went on air.

CHAPTER 11 OF 11

Quick reference

1 Keyboard
2 Stream night in nine lines
3 Where things are set

11.1 Keyboard

WHERE	KEYS
Scoreboard control	A / Z home +1 / −1, K / M away +1 / −1, Shift for +2 / −2, Space starts or stops the clock.
Any Studio window	⌘1 to ⌘9 and ⌘0 go to Output, Production Planner, Scoreboard control, Recordings, Socials, Competitions setup, Sponsors, Athletes, Devices, Docs. ⌘N new window, ⇧⌘O open in the browser, ⇧⌘C copy the page link, ⌘[back, ⌥⌘W close every Studio window.

11.2 Stream night in nine lines

01
Open Studio from the 1P menu and keep the Output page open all night.

02
Check the competition in use and the court on Competitions setup.

03
On Scoreboard control, the first game on your court is picked with Follow PlayHQ on.

04
Turn on the video output your switcher takes and show one graphic to see it land.

05
Play a few seconds of music and an animation with sound.

06
Press a Source key and watch the Output page follow it; put scoring back to Follow PlayHQ after testing.

07
Go to the Live game scene and let the sequences run the breaks.

08
Pick finals winners as they happen; turn on lower thirds when people appear.

09
Press Stream close, turn the output off, and send the sponsor report.

11.3 Where things are set

TO CHANGE	GO TO
Colours, font, logos, rules, finals format, court	Competitions setup
Which game, scoring mode, score, clock, finals winners	Scoreboard control
What's on screen, scenes, sequences, playlists, music, mics, outputs	Output
A graphic's options (heading, position, division, animate away)	Output, under the source's address
Sponsors, tiers, ads, moments, the report	Sponsors
Photos, positions, games played	Athletes
Each night's court, the commentators and who calls each game	Production Planner
Keys and links, and the devices allowed to change things	Devices
Pictures of a game night for social media	Socials
Backups, iCloud, updates, the debug log	The 1P menu

FirstPass Studio is made by PIVT. The Elite Netball League, its clubs, athletes and sponsors are fictional.

FirstPass STUDIO

MADE BY PIVT

FirstPass Studio is made by PIVT. The Elite Netball League, its clubs, athletes and sponsors are fictional.
