Broadcast graphics for netball livestreams, fed live from PlayHQ and run from one Mac.

VERSION 1 · OCTOBER 2026 · BY PIVT

ABOUT THIS GUIDE

Graphics that follow the game.

FirstPass Studio is a Mac app that draws broadcast graphics for a netball livestream and sends them to your vision switcher. The scores, clocks, ladders, fixtures and line-ups come from PlayHQ's public data, so there is nothing to type in during the game.

This guide starts with the way most nights run, one operator and Studio doing the rest, then covers running it by hand, setting up a competition, sponsors, athletes and the Stream Deck.

5 s
The live score, quarter and clock read from PlayHQ every 5 seconds while the game is scored.

31
Broadcast graphics, from the scoreboard and ladder to the sponsor wall, plus a test pattern.

17
Competition logo animations, and six intro and outro styles.

1
Operator on a followed night. Sequences run the run-up, the breaks and full time.

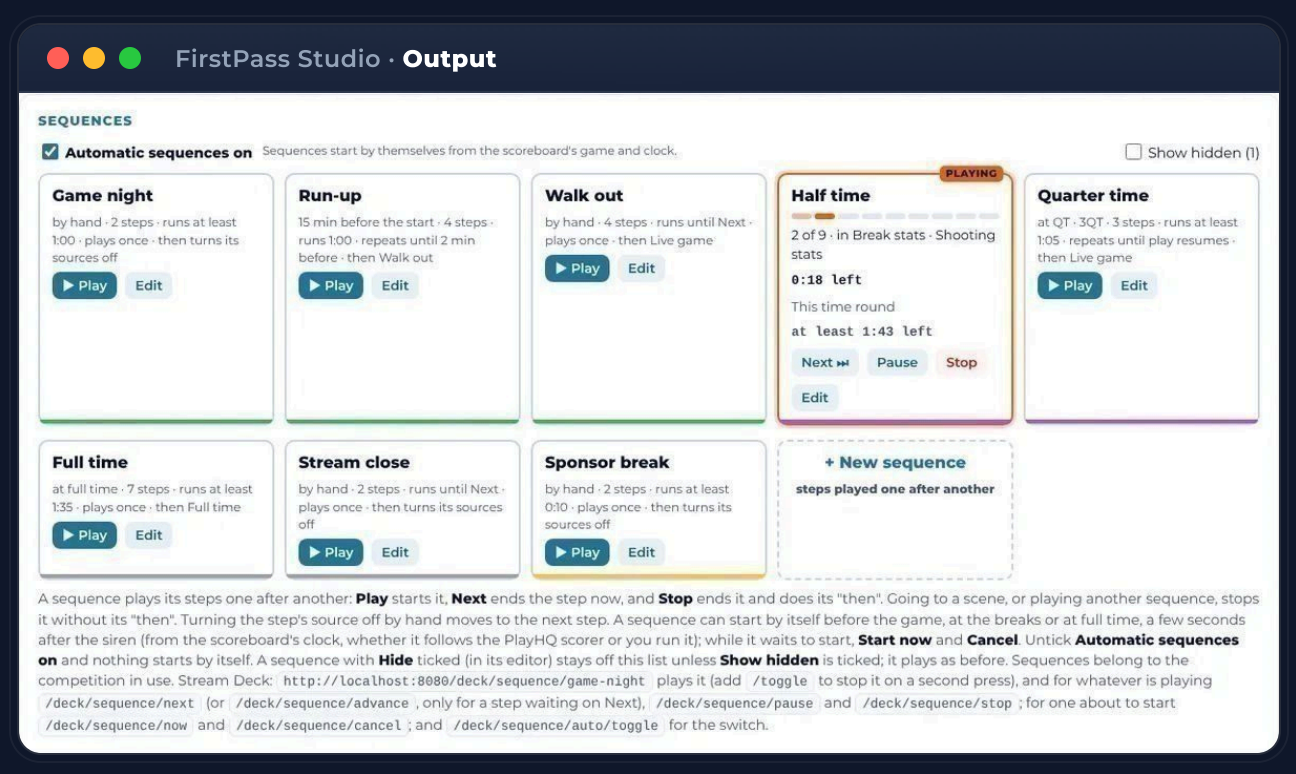
IN
PlayHQ
The fixture, ladder, line-ups and the live score from the scorer's tablet. No account, no key.

→

ON YOUR MAC
FirstPass Studio
Builds one 1920 × 1080 scene from layers: the base scene, automatic layers, scenes and sequences.

→

OUT
Your switcher
A display, a Blackmagic device or NDI, with fill and key or a chroma colour over the cameras.



The Output page runs the show; the super shot plays by itself.

INSIDE

01
What Studio is
The app, the words used and the pages you work in.

02
Getting started
Install, on air and off air, the 1P menu, the checklist.

03
Game night, the automated way
Follow PlayHQ, the base scene, automatic layers, sequences, music, output.

04
Running it by hand
Manual scoring and clock, and a two-person crew.

05
The graphics
Every graphic, pictured, with the options worth knowing.

06
Competitions setup
PlayHQ link, rules, finals, colours, logos, live viewers.

07
Sponsors
Tiers, spots, ads, sponsored moments and proof of play.

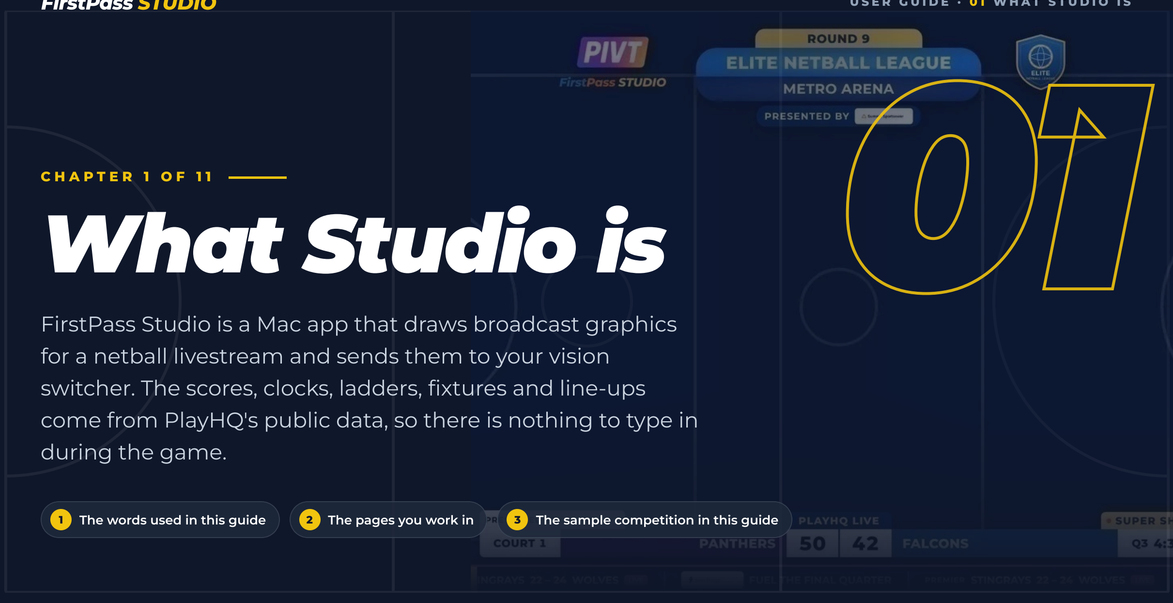
08
Athletes
Photos, silhouettes, positions and games played.

09
Stream Deck
The plugin's keys, the links and timed keys.

10
Settings and care
Data folder, iCloud, backups, updates and fixes.

11
Quick reference
Keyboard, the night in nine lines, where things are set.

The sample league
Every screenshot comes from Studio running the fictional Elite Netball League: eight clubs named after animals, three divisions, a live game and fictional sponsors.



CHAPTER 1 OF 11

What Studio is

01

FirstPass Studio is a Mac app that draws broadcast graphics for a netball livestream and sends them to your vision switcher. The scores, clocks, ladders, fixtures and line-ups come from PlayHQ's public data, so there is nothing to type in during the game.

1. The words used in this guide
2. The pages you work in
3. The sample competition in this guide

Studio does one job on stream night: graphics. Your cameras, switcher and streaming encoder stay as they are. Studio hands the switcher a picture with transparency (fill and key, or a chroma colour) so the graphics sit over the vision.

1.1 The words used in this guide

Studio

The whole thing: the Mac app, the pages you work in, and the graphics it puts on screen.

On air, off air

Studio is on air while a Studio window is open. On air it talks to PlayHQ, serves the graphics and answers the Stream Deck. Closing the last window takes it off air.

A graphic, or a page

One thing that can go on screen: the scoreboard, a ladder, a lower third, an animation. Each is a web page that Studio draws.

A source

A graphic placed in the scene, with its own position, options and fade. The scoreboard is one source; a ladder is another.

The scene

Studio's own 1920 × 1080 frame, built from sources switched on and off. It is what the switcher receives.

A scene (on the Scenes list)

A saved look: which sources are on and which are off. "Live game" and "Clear" are scenes.

A sequence

A list of steps played in order from one press: a run-up, a quarter-time break, a full-time wrap.

The competition

Everything that belongs to one league: its PlayHQ link, names, rules, colours, logos, sponsors and athletes. Studio keeps a setup per competition and uses one at a time.

The data folder

Where Studio saves everything, outside the app, so updates never touch it.

1.2 The pages you work in

Every Studio window has the same bar at the top, with the FirstPass Studio mark and the tabs in three groups by what you are doing. **Run** is the night itself: **Output**, where the show is built and sent out, and **Scoreboard control**, which runs the board. **Plan** is before the night: the **Production Planner** plans the court and the commentators, and **Socials** makes the night's pictures for social media. **Set up** is done once: **Recordings**, **Competitions setup**, **Sponsors**, **Athletes** and **Stream Deck**. **Docs** sits on its own at the right. In the app, ⌘1 to ⌘9 and ⌘0 go to Output, Production Planner, Scoreboard control, Recordings, Socials, Competitions setup, Sponsors, Athletes, Stream Deck and Docs.

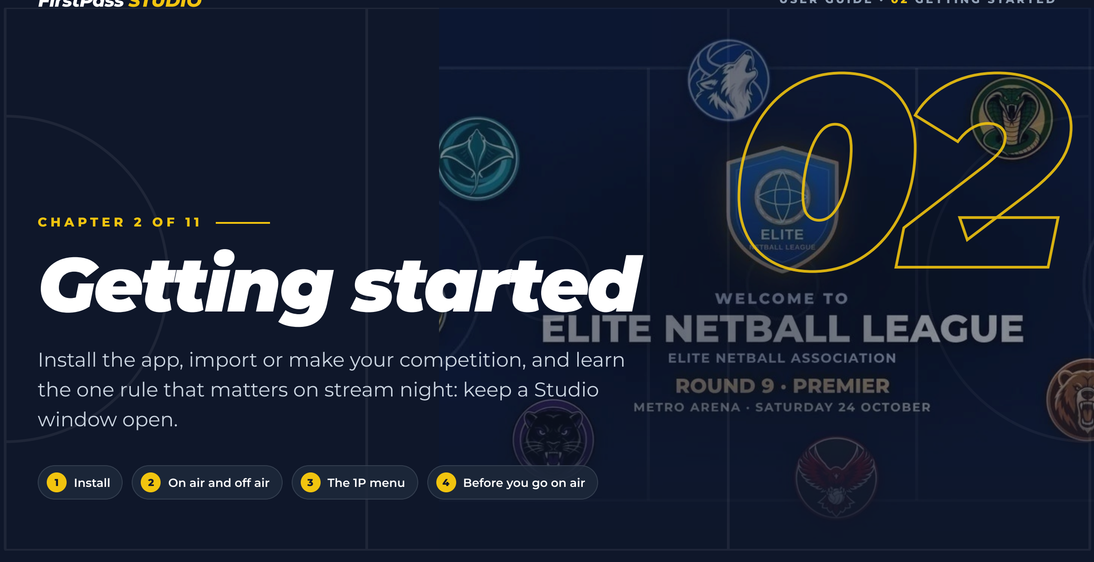
The right of the bar carries the status chips, on every page, so you can see the night from wherever you are: **ON AIR** in orange with the outputs sending (or **Off air**), the game on the board, whether the scores follow PlayHQ with the quarter and the clock (the dot turns amber when a PlayHQ reading is overdue and red when it keeps failing), the sequence playing with its step and the time left on it (and what the run order plays after it), the triggered sequence counting down to start or the run order's **Next**, and **REC** while a game records. A chip is a link to the page that controls it.

The right of the bar carries the status chips, on every page, so you can see the night from wherever you are: **ON AIR** in orange like a tally light, with a dot per output that is solid in the output's colour while it sends and hollow while it doesn't (or **Off air**), the game on the board, whether the scores follow PlayHQ with the quarter and the clock (the dot turns amber when a PlayHQ reading is overdue and red when it keeps failing), the sequence playing with its step and the time left on it, or the triggered sequence counting down to start, **ATEM** while a switcher is set up (green when it answers, red when it doesn't), and **REC** while a game records (grey while Record games waits for one). The chips are status, not links; the tabs take you to a page.

> ***Studio does one job on stream night: graphics.***
>
> CHAPTER 1 · WHAT STUDIO IS

1.3 The sample competition in this guide

The screenshots use a fictional league, the **Elite Netball League**, with eight clubs named after animals (Falcons, Panthers, Stingrays, Cobras, Grizzlies, Hawks, Rhinos and Wolves) across Premier, Men's and Under 21 divisions, playing at the Metro Arena. Its sponsors are fictional too. Everything you see is what Studio draws for any competition once its setup is in.



CHAPTER 2 OF 11

Getting started

Install the app, import or make your competition, and learn the one rule that matters on stream night: keep a Studio window open.

1 Install
2 On air and off air
3 The 1P menu
4 Before you go on air

2.1 Install

01

Download `FirstPass Studio.dmg`, drag the app to Applications and open it. It runs on Apple silicon Macs (M1 and later).

02

The **1P** icon appears in the menu bar, off air. Choose **Open Studio**. A short splash shows, Studio goes on air and the Output page opens in the app's own window.

03

Go to **Competitions setup** and either **Import a template file** (your league's `.json`, with its logos and sponsors inside) or **New competition** and fill it in (Chapter 6).

04

Back on **Output**, add the graphics you need with **Add page**, and turn on the video output that feeds your switcher (Chapter 3).

2.2 On air and off air

The pages zoom like Safari's, for a small screen: **Zoom In** (⌘+), **Zoom Out** (⌘−) and **Actual Size** (⌘⌥0) in the View menu, which shows the level, or a pinch on the trackpad. Every Studio window zooms together and the level is kept on that Mac; while it isn't 100% a chip at the right of the bar shows it, and a click on the chip puts it back. The Docs page has a contents list at the left on a wide window.

Studio only runs while a Studio window is open. Opening one (Open Studio, any page in the 1P menu, or ⌘N) puts it on air; closing the last one takes it off air, and the graphics and Stream Deck get no answer until a window opens again. Closing the last window while on air asks first, and so does ⌘Q, so a stray keypress can't stop a stream. Leave the Output page open all night.

The Output page's status board shows the game on the board, whether scores and clock follow PlayHQ, how long since PlayHQ last answered (amber when overdue, red after a minute of errors) and whether the video output is on. If anything is wrong, the page you keep open says so.

2.3 The 1P menu

Open Studio, Scoreboard control, Competitions setup, Copy the Studio link, Devices..., Install the Stream Deck plugin, Back up... and Restore..., Settings folder (iCloud Drive), Open the settings folder, Open the debug log, Open the app log, Restart Studio, Open at login, Appearance (Follow the Mac, Light or Dark: the Studio pages follow the Mac's light or dark look unless pinned here; the graphics never change), Only this Mac can change things, What's new..., Check for updates, Stop Studio (while on air) and Quit. Updates download in the background and install when the app quits, never mid-stream; **Restart to update** installs one straight away.

LINKS Studio's links start with the Mac's Bonjour name, such as `http://matts-macbook-pro.local:8080/`, so the same link works from a phone, another computer or a Stream Deck on the same network. `http://localhost:8080` works on the Mac itself.

> ***The one rule that matters on stream night: keep a Studio window open.***

CHAPTER 2 · GETTING STARTED

2.4 Before you go on air

01

Open the app. The Output page opens and Studio goes on air. Keep a window open all night.

02

Right competition. Competitions setup shows the one in use at the top. Check its PlayHQ link, the court to follow and the scoring window.

03

Right game. On Scoreboard control, the picked game is tonight's first on your court and Follow PlayHQ is on.

04

Scores arrive. Once the scorer has started on PlayHQ, the control page says the game is being live scored and the board moves. Nothing is read before the scoring window opens, so a quiet board before then is normal.

05

Scene and output. On Output, turn on the display, NDI or Blackmagic output your switcher takes, check fill and key or chroma, and show one graphic to see it land.

06

Sound. Play a few seconds of music and an animation with sound, and check the sound only comes out where you want it.

07

Stream Deck. Press a Source key and watch the Sources list follow it. A score key switches scoring to Manual, so put it back to Follow PlayHQ after testing.

08

Sponsors. Tonight's spots and ads are on; the sponsor report starts counting when the output turns on.

Game night, the automated way

Overture's sequencing and automation tools are the glue that holds the whole game together. Sequences are the timelines that control everything that happens during a game, from the moment it starts to the moment it ends. Automatic layers are the rules that govern how sequences are selected and played. Scenes are the containers that group sequences and layers together. Scripts are the programs that can read and write to sequences.

Jump to: How it fits together · Scoreboard control · The Output page · The base scene · Automatic layers · Scenes · Sequences · Music, playlists and mixes · Video output · A night, start to finish · The Production Planner · Socials · Recordings

How it fits together

Overture's sequencing and automation tools are the glue that holds the whole game together. Sequences are the timelines that control everything that happens during a game, from the moment it starts to the moment it ends. Automatic layers are the rules that govern how sequences are selected and played. Scenes are the containers that group sequences and layers together. Scripts are the programs that can read and write to sequences.

> A sequence can start by itself from the game's clock, entry music, and hand over to another sequence.

Scoreboard control

Overture's Scoreboard control is the bridge between the game and the rest of the system. It's a dedicated page that shows the live score, clock, period, and team names, and lets you edit any of them by hand if the feed gets it wrong. Every change you make here is instantly visible to anything else in Overture that's listening, including sequences, automatic layers, and scripts.

Connecting a scoring feed

Overture Facility Control can connect to a scoring feed so the scoreboard updates itself. Open the Scoreboard page and click **Connect feed**. Choose your feed type from the list, enter the connection details your provider has given you, and click **Connect**. The status indicator will turn green when Overture is receiving data. If it turns red, check the details and try again.

Editing the score by hand

Click any value on the scoreboard to edit it directly. Use the **+** and **−** buttons next to the home and away scores for quick adjustments during play. Click the clock to set it to a specific time, or use **Start**, **Stop**, and **Reset** to control it like a stopwatch. Changes you make by hand are treated the same as changes from the feed, so anything reacting to the score will respond.

Team names and colours

Click **Edit teams** to change the team names, abbreviations, and colours shown on the scoreboard. This is useful for practice games or when the feed doesn't have the right names. Colours you set here are available to sequences and graphics that want to match the teams' kits.

Resetting between games

Click **Reset game** to clear the score, reset the clock to the start of the first period, and return the scoreboard to a blank state ready for the next game. You'll be asked to confirm before anything is cleared, so you won't lose a game by accident.

The Output page

The Output page is where you configure how Overture sends video to one or more displays. Each display is a window, a full screen, or a network stream that you've set up in the Displays section of Settings.

Choosing what to show

Each display has a **Source** setting that decides what it shows. Choose **Program** to show whatever is currently live, **Preview** to show what's queued up next, or **Clean feed** to show the program without any overlays. You can change the source at any time, and the display will switch over immediately.

Overlays

The **Overlays** section lists every graphic that can be layered on top of the video. Tick the ones you want to appear on this display. Overlays are drawn in the order they're listed, so drag them up or down to control which sits on top. Overlays you've ticked on the Program display will also appear on Preview, so you can check how they look before they go live.

Audio

Use the **Audio** section to choose which audio source this display plays. You can also set a volume level and mute it independently of the video. This is handy for keeping a separate audio mix for a stream or a recording.

Resolution and frame rate

Under **Advanced**, you can override the resolution and frame rate for this display. Leave these on **Match source** unless you have a specific reason to change them. If you're sending to a network stream, you may want to lower the resolution to reduce bandwidth.

The base scene

Every Overture project has a base scene that's always present underneath everything else. It's the default backdrop for your output, and it's what you see when no sequence or overlay is playing. Think of it as the stage before the show starts.

Setting the base scene

Open the **Scenes** page and select the scene you want to use as the base. Click **Set as base scene**. From that point on, it will be the fallback whenever nothing else is active. You can change it at any time, and the change takes effect immediately.

Base scene behaviour

Some scenes are designed to work well as a base scene, and some aren't. A scene with a looping video or a subtle animation will keep the output feeling alive between sequences. A scene with a single static image will work too, but it can look dull if it's on screen for long. Preview the scene before you set it.

Clearing the base scene

If you want to go back to a plain black output, open the **Scenes** page and click **Clear base scene**. This is useful between events or when you're setting up a new project and don't have a backdrop ready yet.

Automatic layers

Automatic layers are the rules that tell Overture what to show and when. They're the glue between your sequences and your live data, and they're what makes the system feel like it's reacting to the game rather than just playing a timeline.

How layers work

Each layer watches for a specific kind of event, such as a goal, a penalty, or a period change. When that event arrives, the layer can trigger a sequence, show or hide an overlay, or run a script. You can stack as many layers as you like, and they all run at the same time.

Creating a layer

Open the **Layers** page and click **New layer**. Give it a name, choose the event it should listen for, and then pick what it should do when that event arrives. Most layers only need one action, but you can add more if you want a single event to trigger several things at once.

Conditions

You can add conditions to a layer so it only fires in certain circumstances. For example, you might want a goal layer to only trigger during the third period, or only when the home team scores. Conditions are optional, and a layer with no conditions will fire every time its event arrives.

Priority and overlap

When two layers try to trigger at the same moment, the one with the higher priority wins. You can set priority by dragging layers up or down in the list. If you're getting unexpected behaviour, check the order first.

Scenes

A scene is a named collection of sequences, layers, and overlays that you can switch to as a group. Where a sequence is a single timeline and a layer is a single rule, a scene is the whole setup for a particular moment in the game, such as pre-game, first period, or intermission.

Creating a scene

Open the **Scenes** page and click **New scene**. Give it a name and add the sequences, layers, and overlays you want it to include. You can build a scene from scratch or duplicate an existing one and tweak it.

Switching scenes

Click a scene to make it active. Everything in the previous scene will stop, and everything in the new one will start. You can also trigger scene changes from a layer, so the system can move on by itself when a period ends.

Scene templates

Overture ships with a few scene templates for common moments, such as **Pre-game**, **Intermission**, and **Post-game**. They're a good starting point if you're not sure where to begin. Duplicate one and rename it to make it your own.

Sequences

A sequence is a timeline that plays things in order. It can trigger overlays, play audio, run scripts, and wait for you to move on. Sequences are the building blocks that scenes and layers are made from.

Creating a sequence

Open the **Sequences** page and click **New sequence**. Give it a name and you'll be taken to the timeline editor. Add steps by clicking **Add step** and choosing what kind of step you want.

Step types

There are several kinds of step you can add:

- **Wait** pauses the sequence for a set number of seconds.
- **Overlay** shows or hides a graphic.
- **Audio** plays a sound effect or music cue.
- **Script** runs a small piece of code.
- **Trigger** fires another sequence or a layer.

Running a sequence

Click **Run** to start a sequence from the beginning. You can also trigger it from a layer, from a scene, or from a script. If a sequence is already running when you start it again, you'll be asked whether to restart it or ignore the request.

Music, playlists and mixes

Overture can play music during your events, whether that's a walk-on track, a goal celebration, or a playlist running in the background. Music is managed from the **Music** page, and you can control it from sequences, layers, and scripts.

Playlists

A playlist is an ordered list of tracks that Overture will play one after another. Click **New playlist**, give it a name, and add tracks from your library. You can drag tracks to reorder them, and you can set a playlist to loop so it never runs out.

Mixes

A mix is a single track that you've prepared in advance, for example a DJ set or a pre-recorded show. Add it to your library the same way as any other track. Mixes are treated as one long track, so you can't skip around inside them.

Fades and volume

Each track has a volume setting and a fade-in and fade-out time. Use fades to avoid abrupt starts and stops, especially when one track follows another. You can also duck the music automatically when an announcement is playing.

Controlling music from sequences

Sequences have a **Music** step that can start, stop, or change the track. This is the easiest way to keep the soundtrack in sync with the action. For example, you can start a celebration track when a goal is scored and fade it out after 30 seconds.

Video output

Overture can send its output to more than one place at once. You might want the main screen in the arena, a feed to a streaming encoder, and a preview on a laptop in the booth. Each of these is a separate output, and you can configure them independently.

Output types

Type	What it does
Window	Opens a window on the operator's screen. Useful for previews and for running Overture on a single machine.
Full screen	Sends the output to a chosen display in full screen mode. Use this for the arena screen or a projector.
Network stream	Sends the output over the network to a streaming encoder or another machine.
NDI	Sends the output as an NDI source that other software on the network can pick up.

Adding an output

Open the **Outputs** page and click **Add output**. Choose the type from the table above, then pick the display or enter the network address it should go to. Give it a name so you can tell it apart from the others.

Resolution and frame rate

Each output has its own resolution and frame rate settings. You can match the source, or you can scale down to save bandwidth. If you're streaming, 1080p at 30 frames per second is a good default for most connections.

Overlays on output

Overlays are drawn on top of the video before it leaves Overture, so they appear on every output unless you turn them off for a specific one. This is useful if you want a clean feed for a broadcaster and a branded feed for your own screens.

Starting and stopping outputs

Click **Start** on an output to begin sending video, and **Stop** to end it. You can start and stop outputs while a sequence is running without affecting the rest of the show.

A night, start to finish

Arriving

Set the scene

Open the **Scenes** page and switch to your pre-game scene. Check that the scoreboard is showing the right teams and that the clock is reset.

Check the feeds

Make sure the scoring feed is connected and the status indicator is green. Run a quick test goal if you're not sure.

Queue the walk-on

Open the **Sequences** page and have the walk-on sequence ready to run. Don't start it yet.

Kick-off

Start the clock

Click **Start** on the scoreboard clock when the first puck drops.

Run the walk-on

Trigger the walk-on sequence. It will play the music and overlays you've set up.

Hand over to play

Switch to the in-game scene when the walk-on finishes.

During play

Goals

Goals are picked up automatically from the feed. Check the score after each one and correct it by hand if needed.

Penalties

Penalties are also picked up automatically. Add a penalty overlay if you want one on screen.

Period breaks

Switch to the intermission scene between periods. Reset the clock when the next period starts.

Finishing

Run the post-game

Switch to the post-game scene and trigger the wrap-up sequence.

Stop the outputs

Stop each output once the last graphic has finished.

Save the project

Save your project so you can reopen it for the next game.

The Production Planner

The Production Planner is where you build the run of show for an event. It's a timeline that sits above your sequences and scenes, and it tells Overture what should happen and when. You can plan a whole evening in advance, or you can build it up as the day goes on.

Adding items

Open the **Planner** page and click **Add item**. Give the item a name, choose when it should start, and pick what it should do. Items can trigger a sequence, switch a scene, run a script, or just act as a reminder for the operator.

Timing

Items can be set to start at a fixed time of day, or relative to another item. Relative timing is useful when you don't know exactly when something will happen, but you know it should follow on from the previous thing.

Running the plan

Click **Start plan** to begin. The planner will work through the items in order, waiting for each one to finish before moving on. You can skip ahead, go back, or pause at any point.

Socials

Overture can post to your social channels for you, so you don't have to switch apps during a busy event. Connect your accounts once, and then you can schedule posts, share clips, and keep an eye on what's coming in from viewers, all from the **Socials** page.

Connecting accounts

Open the **Socials** page and click **Connect account**. Choose the platform you want to link and follow the sign-in prompts. You'll be asked to grant Overture permission to post on your behalf. You can connect as many accounts as you like, and you can disconnect any of them at any time.

Scheduling posts

Click **New post** to write something. Pick the accounts you want it to go to, add your text and any media, and choose a time to send it. You can also save a post as a draft and come back to it later.

Templates

If you post the same kind of thing often, save it as a template. Templates can include placeholders for things like the score or the opponent, so you only have to fill in the blanks when you use them.

Viewer submissions

Viewers can send you photos and clips through a public link. Submissions land in a queue where you can review them before anything goes live. You can approve, reject, or edit each one, and you can set a profanity filter to catch the worst of it automatically.

Analytics

The **Analytics** tab shows how your posts are doing, including reach, engagement, and follower growth. Use it to see what's working and what isn't, and adjust your posting times accordingly.

Recordings

Overture can record your output to a file, so you can keep a copy of the game, review it later, or cut highlights. Recordings are managed from the **Recordings** page, and you can start and stop them from there or from a sequence.

Starting a recording

Open the **Recordings** page and click **Record**. Choose which output you want to capture and where the file should be saved. Click **Start** and the recording will begin immediately. Click **Stop** when you're done.

Recording from a sequence

You can also add a **Record** step to a sequence, so the recording starts and stops automatically as part of the show. This is the easiest way to make sure you don't forget to hit record.

File formats

Recordings are saved as standard video files that most editing software can open. You can choose the format and quality in the recording settings. Higher quality means larger files, so pick something you're comfortable with for the length of your events.

Managing recordings

The **Recordings** page lists everything you've recorded, with the date, length, and size. You can rename, delete, or move files from there. Old recordings can take up a lot of space, so it's worth clearing out the ones you don't need.

CHAPTER 4 OF 11

Running it by hand

When nobody is live-scoring the game on PlayHQ, or PlayHQ stops answering mid-game, every automatic part of Chapter 3 has a button. The board, the breaks and the celebrations can all be driven from Scoreboard control and a Stream Deck.

1 Two people, not one · 2 Switching to manual · 3 The score · 4 The clock and the quarter · 5 Breaks and celebrations by hand · 6 Finals

Studio still needs the competition on PlayHQ for its fixture, ladder, squads and results; what changes in manual mode is who runs the score and the clock. The same competition can be followed one week and run by hand the next, and nothing on the Output page changes between the two.

4.1 Two people, not one

A followed game can be run by one person because the score, the clock and the breaks take care of themselves. A game run by hand is a different job: someone has to press a key for every goal within a second or two of it, start and stop the clock with the umpire's whistle, and still call the breaks and the graphics. We recommend two people share it:

Camera operator

- Frames and follows play on the cameras, and cuts between them on the switcher.
- Runs the game clock from the whistle, with **Start / Stop** and **Reset clock** keys beside the camera controls.
- Scores the goals as they go in, **+1** or **+2**, because they are already watching the ring.
- Nothing else: no graphics, no breaks, no music.

Production manager

- Keeps the Output page open and watches the stream itself, not the court.
- Corrects the score (**−1**, **−2**) and the quarter, and sets the clock when it drifts from the venue's.
- Plays the run-up, break and full time sequences from their keys, and the lower thirds, ladders and stats during play.
- Runs the music, the sponsor ads and the end of night, and picks the finals winners.

If one person must do it alone, keep the Stream Deck to the score and clock keys and let the sequences do the breaks, exactly as they do in automated mode: the game triggers follow the scoreboard's clock whoever runs it.

> **If one person must do it alone, keep the Stream Deck to the score and clock keys and let the sequences do the breaks.**
>
> CHAPTER 4 · RUNNING IT BY HAND

4.2 Switching to manual

Press **Manual** on Scoreboard control, or just press any score key: either switches the board to manual scoring and stops following the PlayHQ clock as well. Press **Follow PlayHQ** to go back; the score catches up with PlayHQ on the next check and the clock follows the scorer's again.

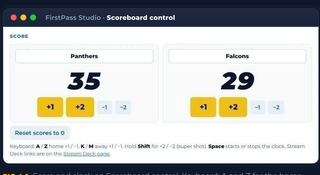


FIG 4.1 Score and clock on Scoreboard control. Keyboard: A and Z for the home team, K and M for away, Shift for a super shot, Space for the clock.

WHEN PLAYHQ DROPS OUT

If PlayHQ stops answering during a followed game, the scoreboard keeps its last score, the ladder, fixtures and game list keep what they last read, and the debug log records each failed read. Switch to Manual and run the board by hand; Follow PlayHQ picks it up again when PlayHQ is back, and corrects the score to the scorer's.

4.3 The score

Each team has **+1**, **+2**, **−1** and **−2**. A +2 is a super shot: it scores two and plays the super shot celebration, so a +2 pressed by mistake is fixed with −2 (which plays nothing). **Reset scores to 0** clears both. The hot streaks and game moments still play in manual mode, because Studio works out the goal order from the presses just as it does from PlayHQ's score.

KEY	WHAT IT DOES
Home +1 / Away +1	A goal.
Home +2 / Away +2	A super shot: two points and the celebration.
−1, −2	Take a goal or a super shot back, quietly.
Reset scores to 0	Both scores to zero, for the next game.
Super shot (home / away)	The celebration only, score unchanged: for a test, or a super shot that was scored as +1 +1.

4.4 The clock and the quarter

Start and **Stop** are one key on the Stream Deck. **Reset clock** puts a full quarter back (the competition's quarter length; a key can set any time). **+10 s** and **−10 s** nudge it, and a key can add or take off any amount. Type the venue's clock in **Match venue clock** to line the two up, and untick **Show clock** for a game with no reliable clock at all. Quarters are **Q1** to **Q4** plus extra time, or H1 and H2 for a competition played in halves; **Next quarter** steps through them. Changing the quarter doesn't touch the clock, so make the quarter key a Stream Deck Multi Action that also resets the clock.

FIG 4.2 Quarter and clock. The super shot tab, the super shot song and the break sequences all read this clock, so they work by hand as they do when following PlayHQ.

4.5 Breaks and celebrations by hand

A sequence that starts by itself at quarter time is started by its key too, so the production manager can run **Quarter time** the moment the siren goes instead of waiting for the clock, or run **Half time** early when a game is called. **Next**, **Pause** and **Stop** work on whatever is playing, and **Automatic sequences on** on the Output page can be unticked for a night where every break is called by hand.

- **Winner.** One key. The celebration reads the board's score when it comes on, so it covers a home win, an away win and a draw. Check the score first. A source with **Result** set to home, away or draw forces it.
- **Super shot and streaks, once.** Besides the automatic sources, a Super shot source set to **Plays: home** or **away**, or a Hot streaks source set to one streak, plays once each time it is turned on. Don't keep a manual source and the automatic one on together, or it plays twice.
- **The Clash.** A pre-game animation, played from its key or as a step in the walk-out sequence, with the two teams, their logos and club colours.
- **Lower thirds.** The person lower third's name box on the Output page suggests the competition's athletes; type a guest's name and title for a commentator or an official. Turn it on when they appear and off a few seconds later.
- **Stats during play.** The ladder lower third, shooting stats, last 10 goals and match up are all Source keys. Each loads fresh when shown, so it has the latest numbers.

4.6 Finals

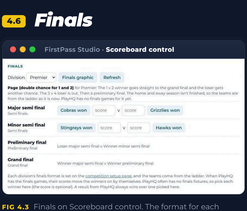

FIG 4.3 Finals on Scoreboard control. The format for each division is set on the Competitions setup page, and the teams come from the ladder.

PlayHQ often has no finals fixtures until the day. In **Finals** on Scoreboard control, pick the division, then pick each game's winner (the score is optional) as the finals are played; the finals graphic and the ladder's finals key move on with each pick. A result from PlayHQ, when it has one, always wins over one picked here.

CHAPTER 5 OF 11

The graphics

Every graphic Studio draws, grouped by when it is used. Each one is added to the scene with **Add page** on the Output page, and its options appear as fields under its address; the options named here are the ones worth knowing.

1 Always on · 2 Before the game · 3 During play · 4 After the game · 5 The competition · 6 The breaks · 7 Checking the outputs

All of them follow the game night, game and court picked on Scoreboard control, take the competition's colours, font and logos from its setup, and fit long team names. Cards sit in the space between the title and the scoreboard and shrink to fit when they have more in them than fits. Every page, with its link and a Preview button, is also listed on the Docs tab.

5.1 Always on

FIG 5.1 Scoreboard. Court, both teams with their logos and club colours, the score, the quarter and the clock, centred at the bottom above the ticker. Options: position (top centre, bottom left and so on), super shot tab on or off, and the naming-rights sponsor's tab.

FIG 5.2 Score ticker. The scores from tonight's other games scrolling along the bottom, leaving out the game on the board, updated every 30 seconds. Speed from the control page or a Stream Deck key; a Partner sponsor's logo takes a slot in the line.

FIG 5.3 Title. Competition, round and venue in a banner at the top. Options: an emoji either side, the competition logo above it, top or bottom, and the naming-rights sponsor under it.

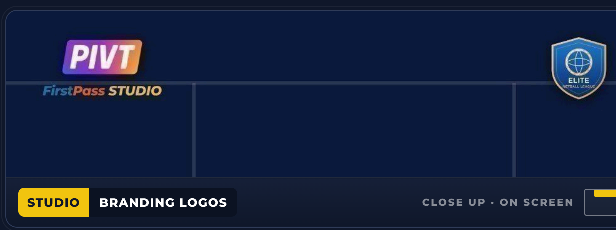

FIG 5.4 Branding logos. PIVT and FirstPass Studio left of the title, the competition logo right. Each can be hidden; gap, height and size adjust the placement.

FIG 5.5 Viewers. "N watching" from the competition's YouTube and Facebook streams, top right, shown only once the count passes the competition's minimum. **Shows: peak** makes it a card for the end of the night.

5.2 Before the game

FIG 5.6 Countdown. Counts down to the picked game's scheduled start, with the two teams. Options: heading, the words at zero, a fade over the last seconds, position and a sponsor.

FIG 5.7 Up next. The next game on this court (or any court), with its time, teams and logos. After the last game it becomes the end-of-night card.

FIG 5.8 Match up. Both teams side by side with their last five results as form dots and this season's head to head. **Form** and **Head to head** can each be hidden.

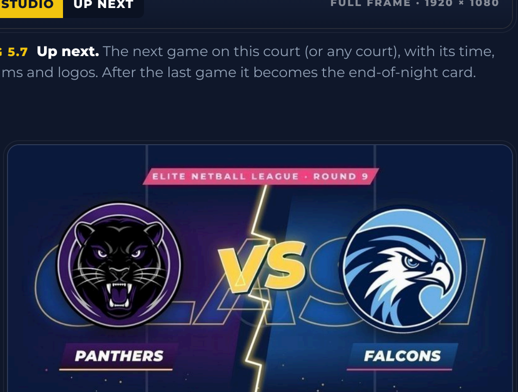

FIG 5.9 The Clash. The two teams slam together behind a big word (IMPACT, CLASH, SHOWDOWN, your own) in their club colours. Options: the word, the bottom line, animate away after N seconds.

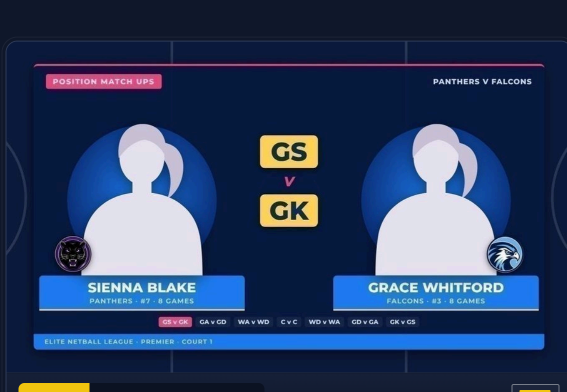

FIG 5.10 Position match ups. Who marks whom, position by position, with the athletes' photos from the Athletes page or a silhouette. Options: seconds per pairing, loop or stop, start with GS or GK, one pairing only, animate away at the end.

FIG 5.11 Position match ups, all seven. The same page can show every pairing at once as one card.

FIG 5.12 Team list. One team's line-up from PlayHQ with positions, captain and bench, warmed up before the game so it shows at once. Add one source per side.

FIG 5.13 Intro and outro. Six full-screen styles, about 8 seconds, with the round's teams and a yellow message line. Options: style, teams from a division or round, time on screen, a theme song with its timing and volume, sound effects, a background.

5.3 During play

FIG 5.14 Super shot. Automatic, 3 seconds, the scoring team's logo and colour; the sponsored-moment tag names who brought it. **Plays: home / away / no team** makes a manual one.

FIG 5.15 Hot streaks and moments. Heating up, on fire, goal for goal, hits the front, all square, coming back, on the siren, back to back. Automatic from the goal order, or **Plays** picks one to play once.

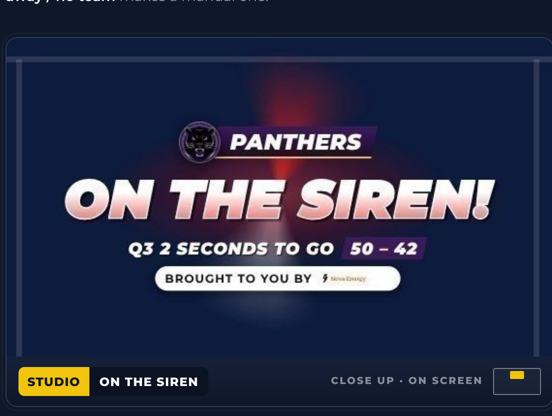

FIG 5.16 On the siren. A goal in the last seconds of a quarter. Moments are the only animations that need nothing from you; they also take the sponsor's "brought to you by" tag.

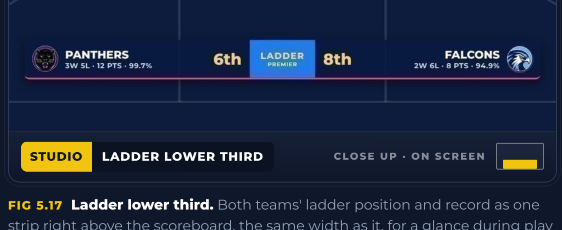

FIG 5.17 Ladder lower third. Both teams' ladder position and record as one strip right above the scoreboard, the same width as it, for a glance during play without covering the game.

FIG 5.18 Last 10 goals. The game's recent goals oldest to newest with a momentum line and the current run, worked out by Studio from the score, updating while it stays on. Options: across the top or down the side, how many goals, position and heading.

FIG 5.19 Shooting stats. Goals, super shots and attempts per shooter from PlayHQ's game page, for a break or a quarter-time sequence. Super columns are left off for a division without super shots.

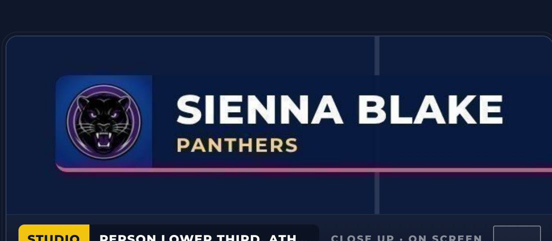

FIG 5.20 Person lower third, athlete. Name, team and club logo from the athlete register, with their photo if there is one. The Output page suggests names as you type.

FIG 5.21 Person lower third, guest. Name, title and the competition logo, for a commentator, an official or a sponsor's guest. Options: a tab above, position left or right, animate away.

FIG 5.22 Commentators, thin line. The commentary team in one slim strip above the scoreboard: a pink tab, like Special guest commentators, and up to four names joined with "and". With no names typed, whoever the Production Planner has on the mic.

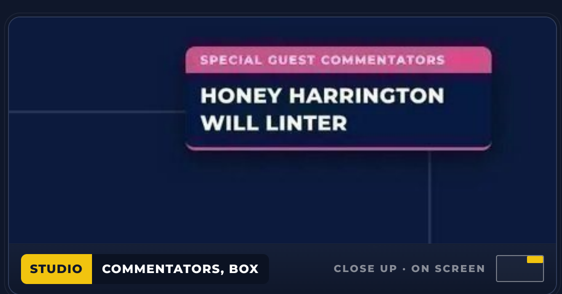

FIG 5.23 Commentators, box. The same names as an upper third in the top right corner beside the competition logo, a line per name. Options: under the title instead, the tab's words, animate away.

5.4 After the game

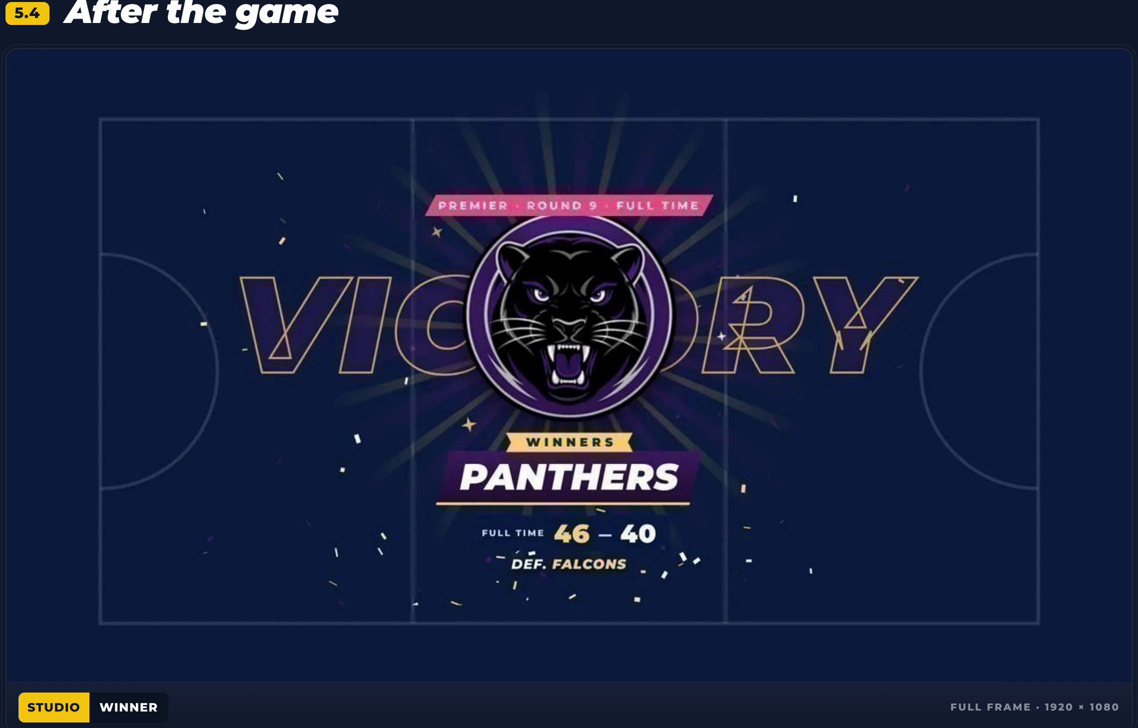

FIG 5.24 Winner. The winning team, logo, final score and a big word, worked out from the board each time it comes on. Options: force a result, the word, the line under the score, animate away.

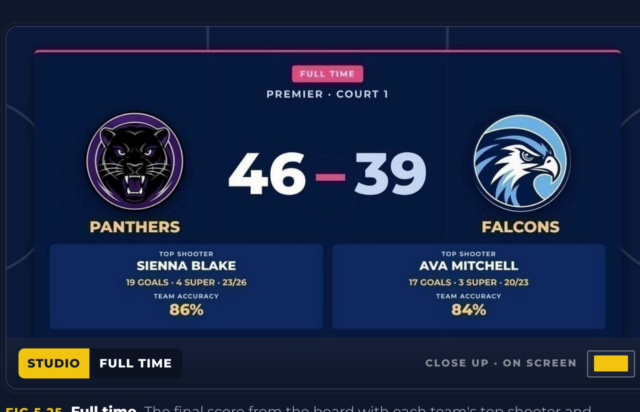

FIG 5.25 Full time. The final score from the board with each team's top shooter and shooting accuracy from PlayHQ's game stats. **Heading** makes it a half time card.

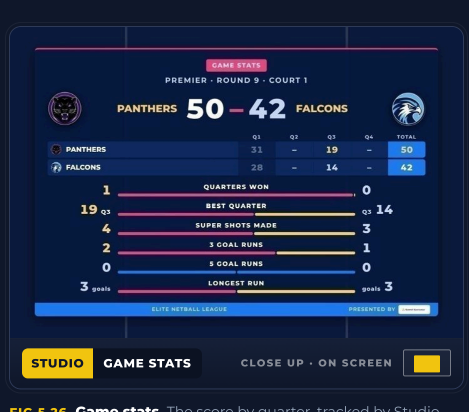

FIG 5.26 Game stats. The score by quarter, tracked by Studio from the board, then team against team: quarters won, best quarter, super shots made, 3 and 5 goal runs and the longest run, with a sponsor's footer.

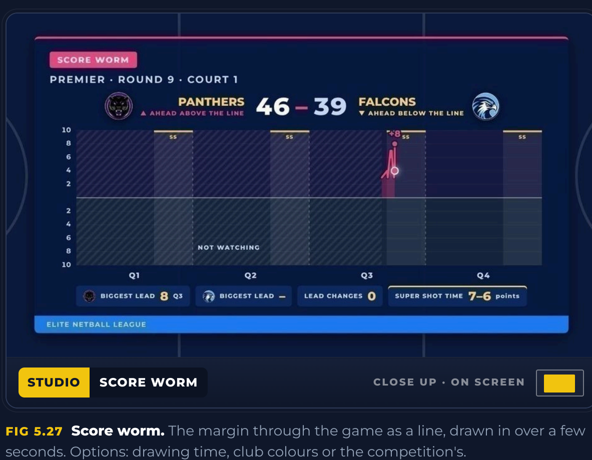

FIG 5.27 Score worm. The margin through the game as a line, drawn in over a few seconds. Options: drawing time, club colours or the competition's.

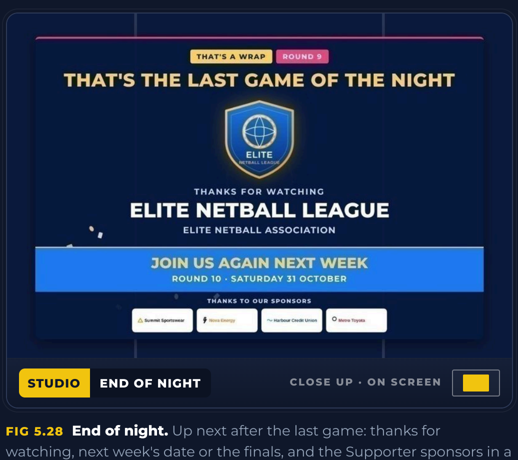

FIG 5.28 End of night. Up next after the last game: thanks for watching, next week's date or the finals, and the Supporter sponsors in a strip. Options: the invite line, sponsors on or off.

> **Cards sit in the space between the title and the scoreboard and shrink to fit when they have more in them than fits.**
>
> CHAPTER 5 · THE GRAPHICS

5.5 The competition

FIG 5.29 Ladder. The division's ladder with the finals places marked and a key under it. Options: division, rows, logo on or off, light or dark mode logo.

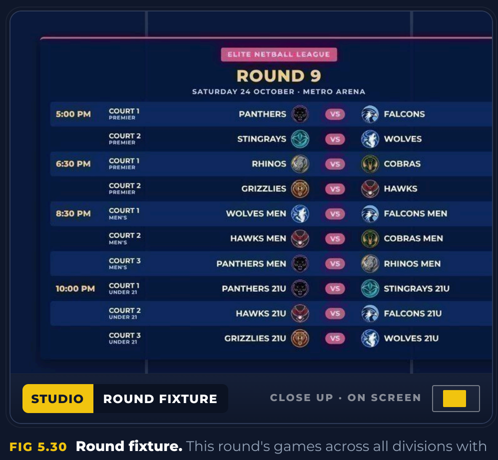

FIG 5.30 Round fixture. This round's games across all divisions with day, time and court. **Round** takes next, prev, +2, a number or a name like Final. When divisions are on different rounds, each game shows its own.

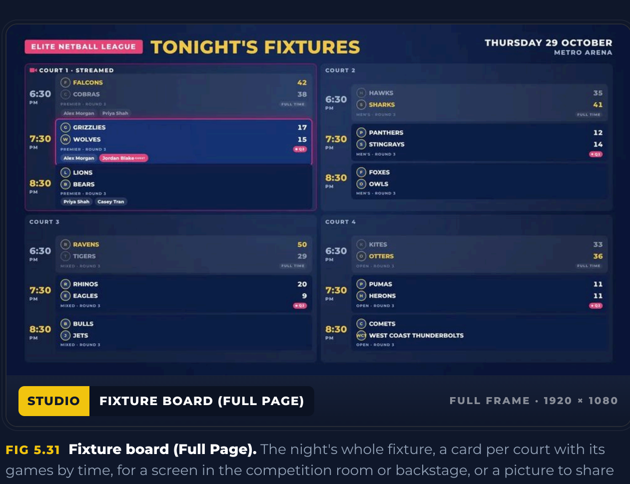

FIG 5.31 Fixture board (Full Page). The night's whole fixture, a card per court with its games by time, for a screen in the competition room or backstage, or a picture to share before the night (**Tuesday Night's Fixtures**). The streamed court has a camera and its games name the commentators from the Production Planner; games being played show their live score, and finished ones grey out with the winner in yellow. Not for the stream.

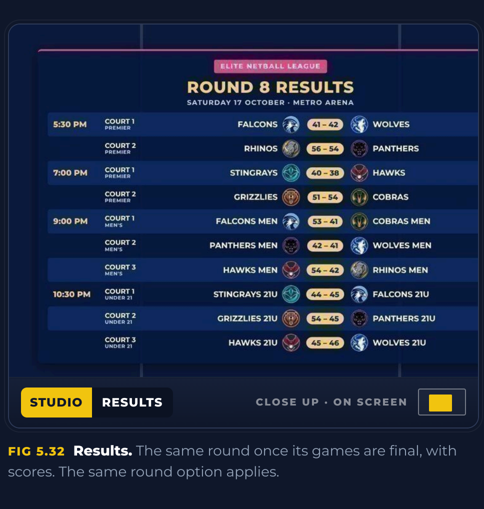

FIG 5.32 Results. The same round once its games are final, with scores. The same round option applies.

FIG 5.33 Top shooters. The season's leading shooters for a division. Options: order by goals or average, how many shooters, a sponsor footer.

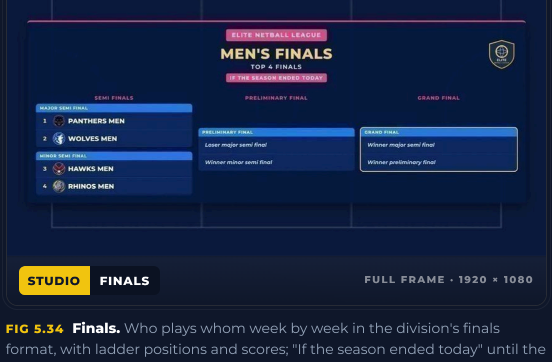

FIG 5.34 Finals. Who plays whom week by week in the division's finals format, with ladder positions and scores; "If the season ended today" until the home-and-away rounds finish. Options: one week only, the heading and the line under it.

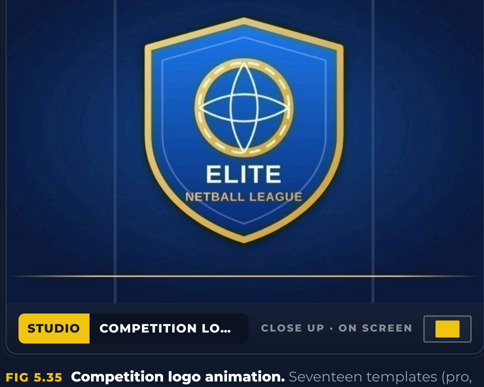

FIG 5.35 Competition logo animation. Seventeen templates (pro, coin, tiles, glitch, badge, lightning, court, bibs, net and more), about 5 seconds, with optional words and a smaller line.

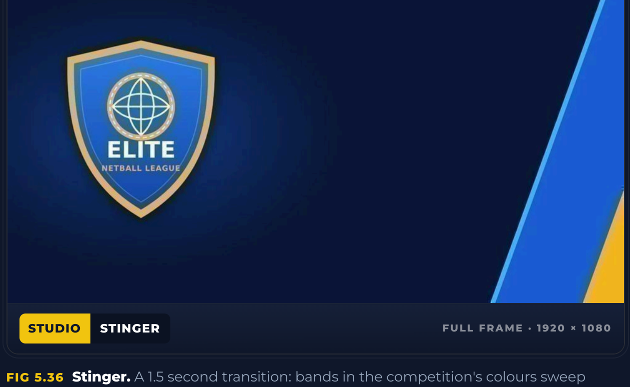

FIG 5.36 Stinger. A 1.5 second transition: bands in the competition's colours sweep across and cover the whole picture with the competition logo for half a second, so a cut can happen underneath, then carry on off the other side. Options: hold, length, logo on or off, light or dark mode logo, whoosh volume, and the music quieted for the next scene or dipped while it plays.

5.6 The breaks

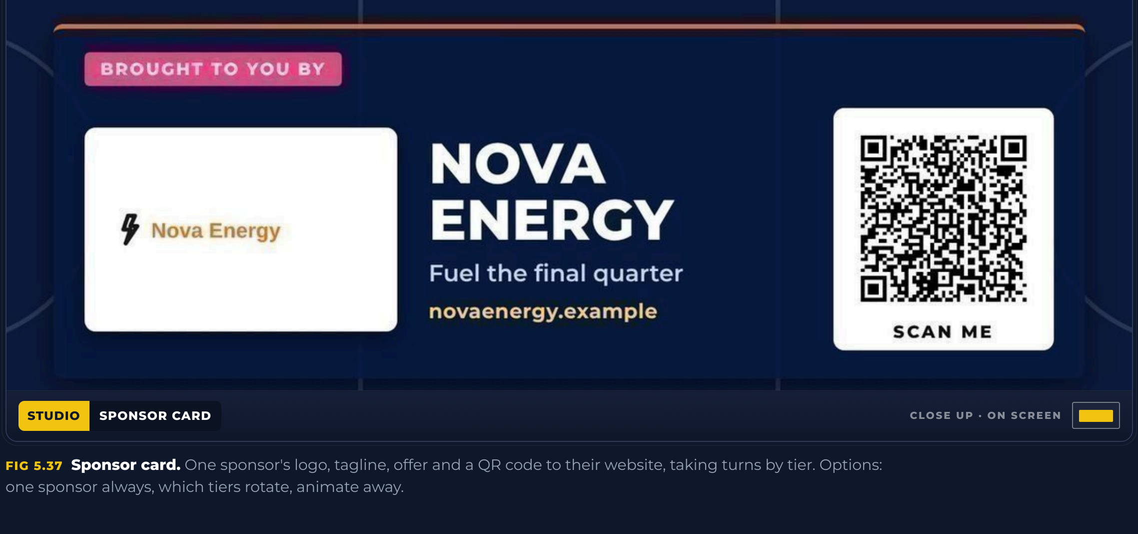

FIG 5.37 Sponsor card. One sponsor's logo, tagline, offer and a QR code to their website, taking turns by tier. Options: one sponsor always, which tiers rotate, animate away.

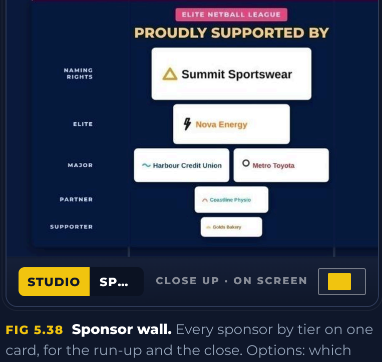

FIG 5.38 Sponsor wall. Every sponsor by tier on one card, for the run-up and the close. Options: which tiers, names under the logos.

FIG 5.39 PIVT and FirstPass Studio ad. A 10-second house ad for a break with nothing sold. A Sponsor ads step plays it when no sponsor's ad is due, if **House ad** is ticked.

5.7 Checking the outputs

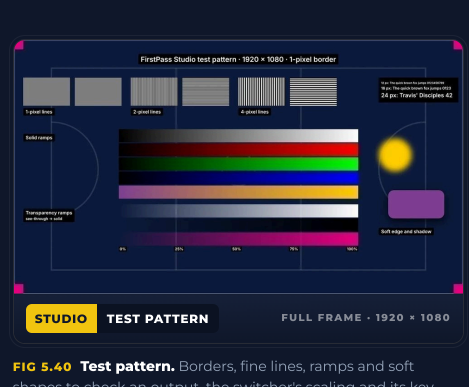

FIG 5.40 Test pattern. Borders, fine lines, ramps and soft shapes to check an output, the switcher's scaling and its key end to end before the stream. Never for air.

CHAPTER 6 OF 11

Competitions setup

Everything about a competition that doesn't come from PlayHQ lives on one page: its PlayHQ link, the names on the graphics, the game rules, finals, game day, colours, font and logos. Set it up once a season and every graphic follows.

1 PlayHQ
2 Names on the graphics
3 Game rules
4 Finals
5 Game night
6 Colours and font
7 Logos
8 Live viewers
9 Templates, export and more

Studio keeps a setup per competition. The one marked **In use** is what every graphic, Scoreboard control, the Sponsors page and the Stream Deck use. Changes aren't kept until you press **Save** (or **Save and use this competition**), and leaving the page with unsaved changes asks first.

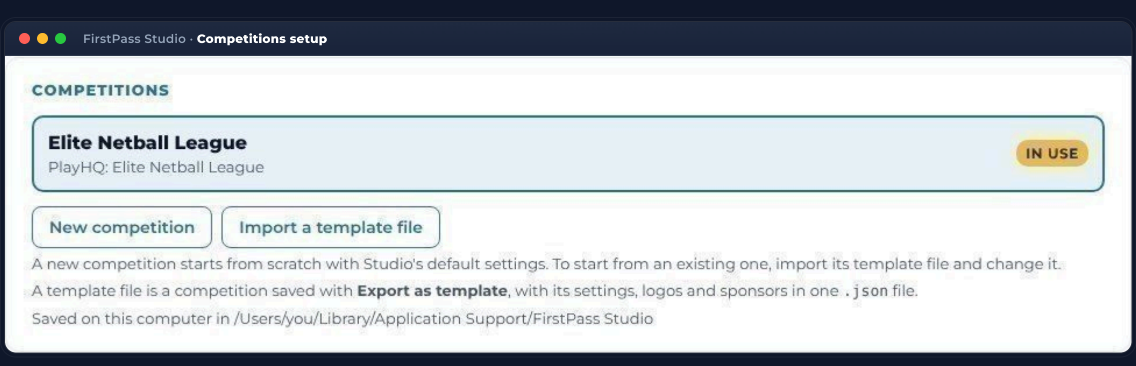

FIG 6.1 The competitions list. Start from a template file (the repository has Thunder League, AMMNA Nationals, GIG WANL and West Coast Thunder) or press New competition for Studio's defaults.

6.1 PlayHQ

Paste the address of the organisation's page on playhq.com and press **Find its competitions**; then pick the competition and the season. For a carnival or a league run under another body, use the organisation the competition is listed under. Nothing else about PlayHQ is needed: no account, no key.

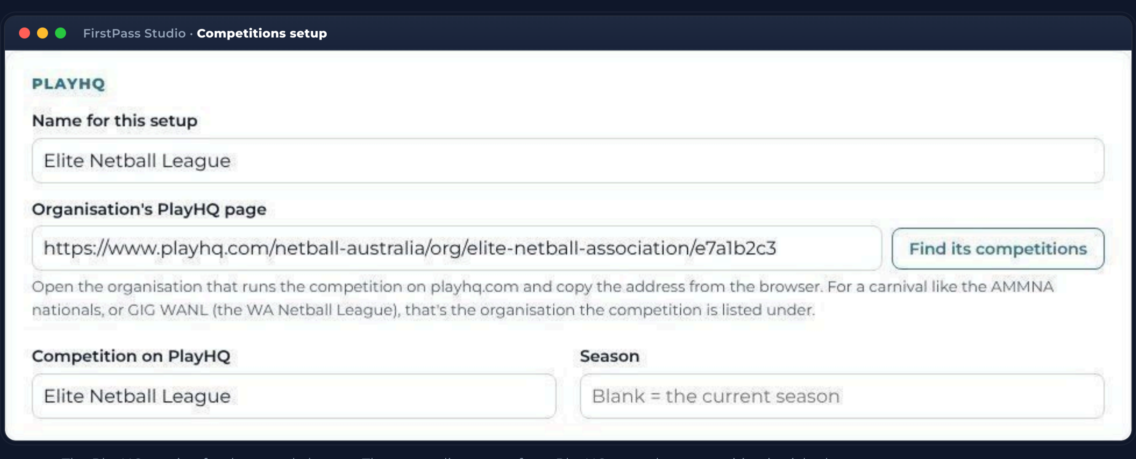

FIG 6.2 The PlayHQ section for the sample league. The season list comes from PlayHQ once the competition is picked.

6.2 Names on the graphics

The competition name on the title banner, the organisation name as the ladder's heading, and the venue for the title, fixture and Up next. PlayHQ's names are often long or formal; these are the ones viewers see.

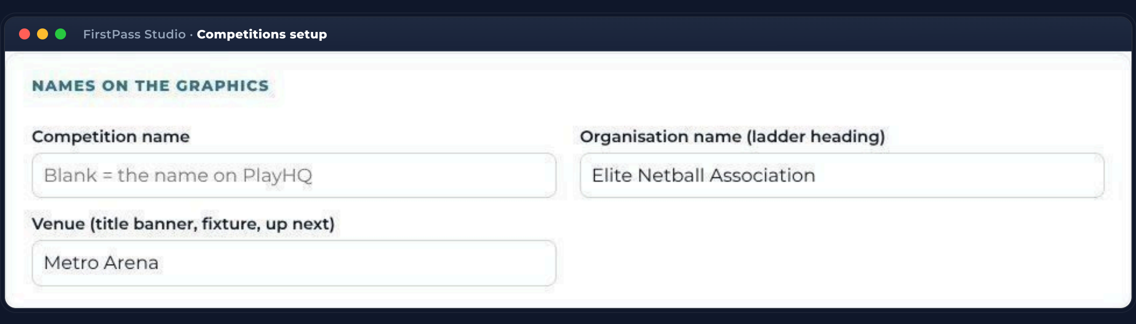

FIG 6.3 Names on the graphics.

6.3 Game rules

Quarters or halves and their length set the clock, the quarter buttons and the wording of the break cards. **Super shots** turns on the +2 scoring, the celebration, the super shot tab in the last minutes of each quarter and the Super columns on the shooting graphics; a division can have its own setting, by its name or by a word in it ("Open", "Men"). The break lengths let the sequence editor say how many loops of a break sequence fit in the break.

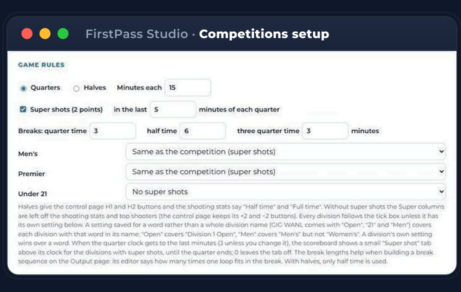

FIG 6.4 Game rules. The sample league plays 15-minute quarters with super shots in the last 5 minutes, except in its Under 21 division.

6.4 Finals

Pick the finals format for the competition, or per division: it decides the finals places the ladder marks (double chance or a week off, elimination, playing for third) and the bracket the finals graphic draws week by week. PlayHQ's finals games are used when it has them; otherwise the winners are picked on Scoreboard control. **The winners are called** picks Champions or Premiers for the Socials tab's picture of the grand final winners.

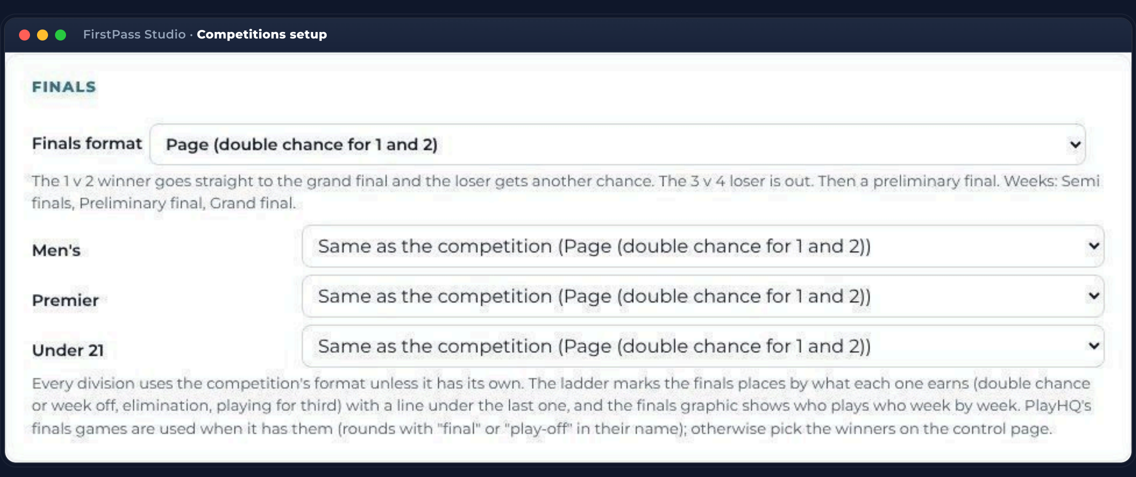

FIG 6.5 Finals formats, per division where they differ.

6.5 Game night

The court Studio follows, whether it picks the game automatically, when electronic scoring starts before each game (10 minutes by default; 20 or 30 when games are further apart) and how many days ahead tonight's games are found. These are starting points: Scoreboard control can change the court, pick a game by hand or pick another game night. On a carnival day with several rounds, this round moves on as each round's first game comes up. **Running top shooters are called** sets the Socials picture's name: Automatic calls it Tournament top shooters when the fixture runs under 15 days and Season top shooters otherwise.

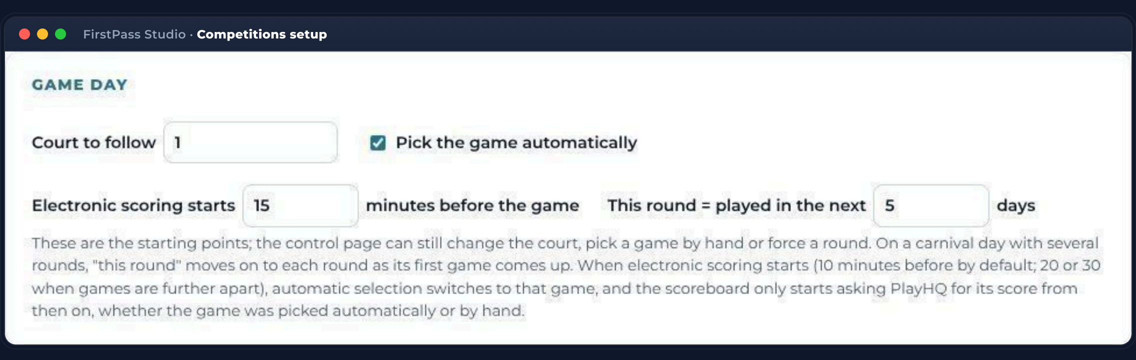

FIG 6.6 Game night.

6.6 Colours and font

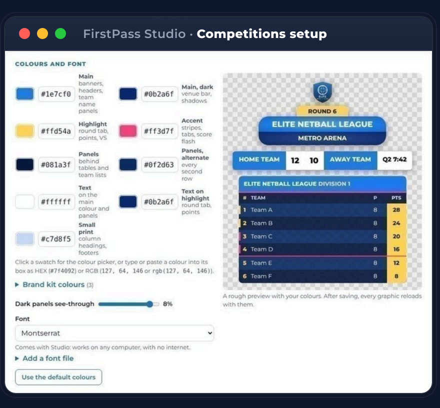

FIG 6.7 Colours and font, with the preview.

The competition's colours, see-through dark panels, and the font. Paste a brand kit's text into **Brand kit colours** and every HEX or RGB value in it becomes a swatch in each colour picker. Add a font file (TTF, OTF, WOFF or WOFF2, one per weight or a variable font) and it travels with the competition and its template, so the graphics look the same on any Mac; every font is sized to match the capitals of Montserrat, which the graphics were drawn with. The preview under the pickers shows a rough title and scoreboard in the colours before you save.

6.7 Logos

The **competition logo** has a light mode and a dark mode version (one is used for both if that's all you add); it shows beside the title in the branding logos, above the title with its option on, in the corner of the ladder and in the logo animations. **Team logos** are matched to PlayHQ team names by file name, so drop in a folder of files named after the teams. Logos and colours belong to clubs: every team of a club, in every division, gets the club's logo and colour, worked out from the team name without its division ("Falcons 21U" is Falcons). Fix a wrong match in the **Club** box. A club colour goes behind its teams' names on the scoreboard and behind their logo on The Clash; without one the competition's colours are used.

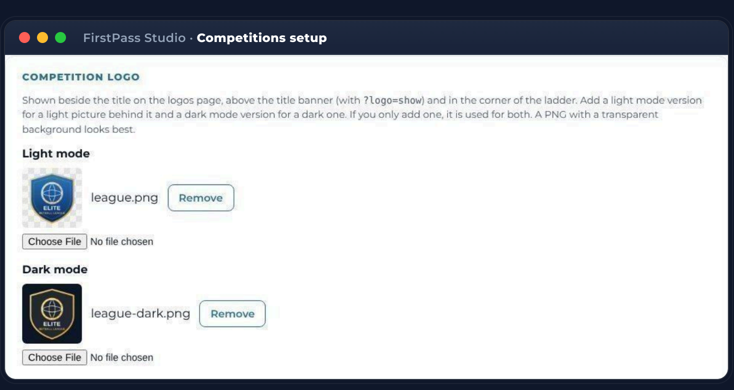

FIG 6.8 Competition logo, light and dark mode.

FIG 6.9 Team logos and the teams on PlayHQ, grouped by club with a club colour each.

> **Logos and colours belong to clubs: every team of a club, in every division, gets the club's logo and colour.**
>
> CHAPTER 6 · COMPETITIONS SETUP

6.8 Live viewers

Add the YouTube channels and Facebook Pages the competition streams to. While a video output is on, Studio adds up how many are watching every 30 seconds, for the Output page, the viewers graphic (which shows only from the minimum set here) and the viewer-minutes in the sponsor report. The page explains how to get a YouTube API key and a Facebook Page token; both are kept on this Mac only, never in iCloud, templates or exports.

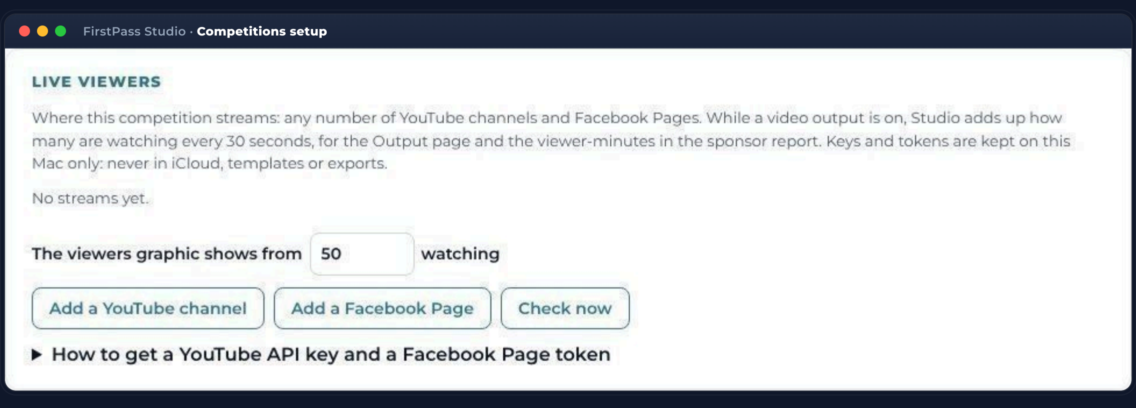

FIG 6.10 Live viewers.

6.9 Templates, export and more

Export as template saves the competition's settings, team logos, competition logo, font and sponsors (with their logos) as one .json file to import on any Studio or keep as a backup; **Import a template file** adds it. A PlayHQ Client ID is only needed if PlayHQ's game page has no line-ups and the association has given you one. **Delete this competition** removes it; deleting the one in use switches the graphics to another.

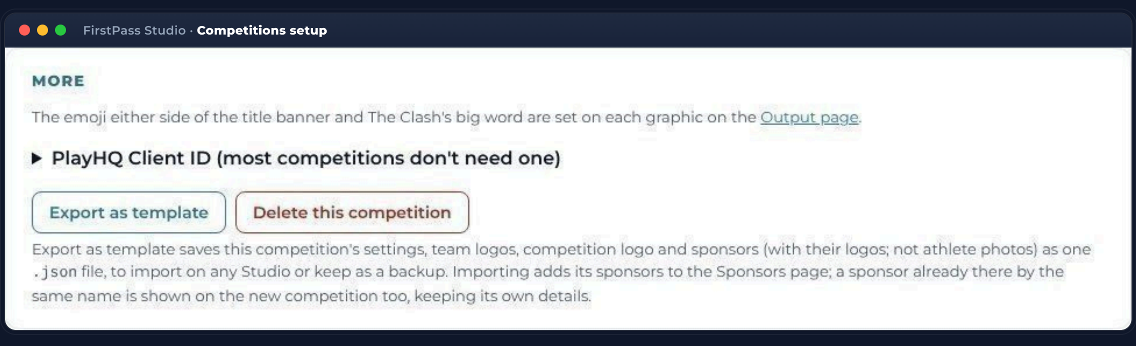

FIG 6.11 The More section: Client ID, export and delete.

CHAPTER 7 OF 11

Sponsors

The Sponsors tab turns sponsorship into something you can sell, run and prove: a tiered library of sponsors, spots on the graphics that fill themselves, ad breaks that take turns fairly, and a report of what each sponsor got.

1. Tiers
2. A sponsor
3. Spots and moments
4. Proof of play

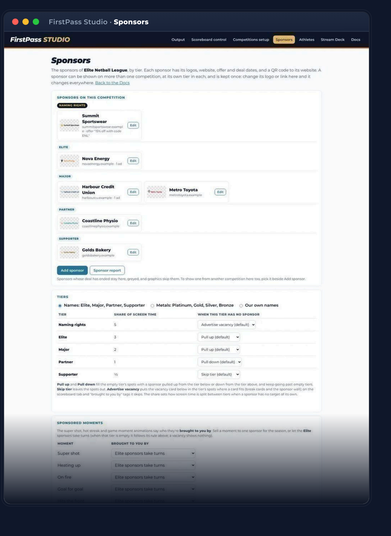

FIG 7.1

The Sponsors page for the sample league: sponsors by tier with tonight's exposure meter, the tier rules, sponsored moments and the vacancy card.

7.1 Tiers

Five fixed ranks, named per competition: the **Names** preset (Naming rights, Elite, Major, Partner, Supporter), the **Metals** preset (Naming rights, Platinum, Gold, Silver, Bronze) or your own. Each tier's **share of screen time** decides how turns are split when a sponsor has no target of its own. Each tier gets different places:

TIER	WHERE IT SHOWS
Naming rights	A tab on the scoreboard, under the title banner, first on the sponsor wall, and everything below.
Elite	The sponsored moments (super shot, streaks), ads in the breaks, the break card, and everything below.
Major	Ads and break cards, "presented by" footers on the stats cards, countdown and top shooters.
Partner	A slot in the score ticker and the logo spots.
Supporter	The sponsor wall and the end-of-night strip.

When this tier has no sponsor says what a spot does when its tier is empty: **Pull up** fills it from the tier below, **Pull down** from the tier above, **Skip tier** leaves it out, and **Advertise vacancy** shows the competition's vacancy card wherever a card fits. The vacancy card has a heading, a contact, a message and a link or email for its QR code, so an empty tier finds its own sponsor.

> ***The vacancy card has a heading, a contact, a message and a link or email for its QR code, so an empty tier finds its own sponsor.***
>
> CHAPTER 7 · SPONSORS

7.2 A sponsor

A sponsor has a name, tagline, website, offer, brand colour, category, deal dates, and optional targets per stream (minutes on screen, ad plays). Category keeps competing sponsors apart in rotation. Add a colour logo and a white one for dark panels (without a white one, the colour logo is made white). A sponsor is kept once and can be **shown on** several competitions at its own tier in each; sponsors whose deal has ended stay greyed and the graphics skip them.

Ads are videos or stills (up to 10 per sponsor) in the media folder. A **Sponsor ads** step in a sequence plays the next ads due, taking turns fairly by tier, each video to its end with sound and each still for its seconds; tick **House ad** and the PIVT and FirstPass Studio ad plays when nothing is due. The **QR code** points to the sponsor's website with tracking tags, so visits from the stream show in their analytics; save it as a PNG for the sponsor's own use.

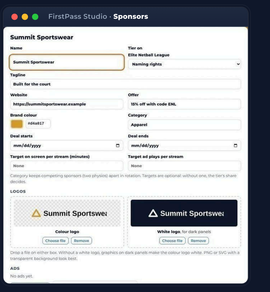

FIG 7.2 The sponsor editor: details, logos, ads, the QR code with tracking tags, and the competitions it is shown on.

7.3 Spots and moments

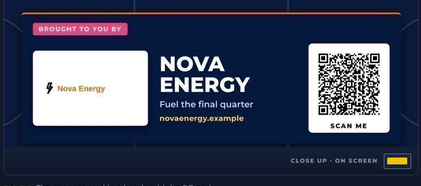

FIG 7.3 The sponsor card in a break, with its QR code.

FIG 7.4 The sponsor wall before the game, sized by tier.

Every spot picks its sponsor from the Sponsors page by default. Each graphic's **Sponsor** option can pin one sponsor or turn the spot off. **Sponsored moments** sells the super shot, each hot streak and each game moment to one sponsor for the season, whose name appears in a "brought to you by" tag on the animation; by default the Elite sponsors take turns.

7.4 Proof of play

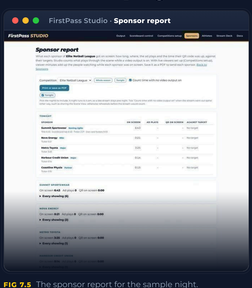

FIG 7.5 The sponsor report for the sample night.

While a video output is on, Studio logs every second each sponsor is on screen and every ad played, matched to the scene's sources, and reads the live viewer count every 30 seconds. **Sponsor report** turns that into a page per night (or a run of nights) with minutes on screen, ad plays, viewer-minutes, peak and average viewers per sponsor, ready to print or save as a PDF for the sponsor. A tick box counts time with no video output on, for a rehearsal. With more than one output, only Output 1 and outputs with **Counts for sponsors** ticked are counted, and each counts as on air only while it's on: an output set to **Web links only** is off.

CHAPTER 8 OF 11

Athletes

PlayHQ gives Studio every athlete in a line-up, but not their faces. The Athletes tab holds a photo per athlete for the position match ups and the person lower third, and a record of positions and games played that PlayHQ's history doesn't cover.

1. Photos
2. Positions and games played

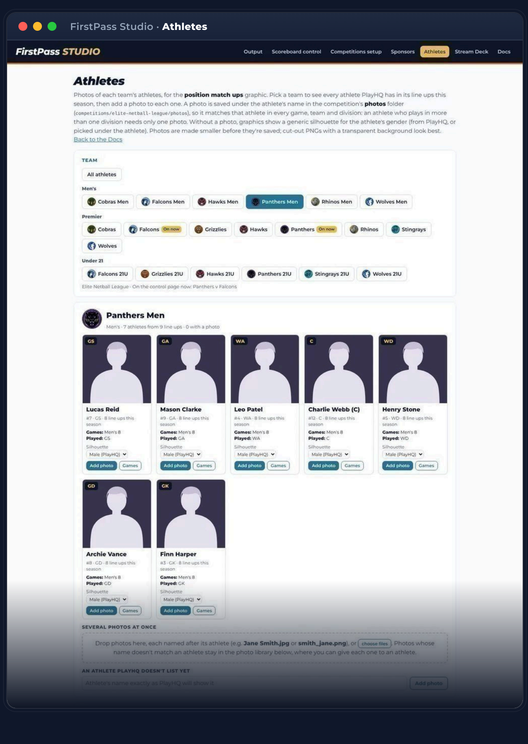

FIG 8.1

The Athletes page: teams grouped by division, every athlete PlayHQ has in a line-up this season, and the photo library.

8.1 Photos

Pick a team and add a photo to each athlete, or drop a folder of photos named after the athletes ("Jane Smith.jpg" or "smith_jane.png") on **Several photos at once**; any that don't match wait in the photo library to be given to someone. A photo is saved under the athlete's name for the competition, so an athlete in two divisions needs one photo. Studio also remembers each athlete's PlayHQ id, so if PlayHQ changes a player's name during the season, their photo still finds them. Photos are made smaller when saved; cut-out PNGs with a transparent background look best. Without a photo the graphics show a silhouette for the athlete's gender, taken from the division (men's, women's; mixed and open are neutral) and changeable under the athlete. **An athlete PlayHQ doesn't list yet** adds one ahead of their first game.

A photo only goes on the stream and the Socials pictures once **Approved for photo use** is ticked under the athlete. Tick it when the athlete, or their parent or guardian, has agreed to their image being used. Until then the graphics show the silhouette. **Approve all for photo use** ticks every athlete listed for the team at once.

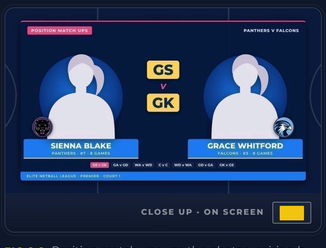

FIG 8.2 Position match ups use the photos, pairing by pairing.

FIG 8.3 The athlete lower third, named from the register as you type on the Output page.

> ***A photo is saved under the athlete's name for the competition, so an athlete in two divisions needs one photo.***

CHAPTER 8 · ATHLETES

8.2 Positions and games played

Games under an athlete opens their record. Positions played in a PlayHQ line-up this season are ticked already; tick any others from other seasons or competitions. Games played takes a line per division (and club): the number as of a date, to which Studio adds the games PlayHQ shows after it, so milestones keep up through the season. With no line, a division's games are this season's from PlayHQ.

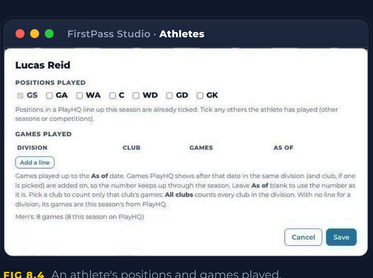

FIG 8.4 An athlete's positions and games played.

CHAPTER 9 OF 11

Stream Deck

A Stream Deck is the control surface for stream night: one key per source, scene and sequence, each lit while it's on, plus score, clock and quarter keys for a game run by hand. Studio ships its own plugin, and every control also has a plain link.

1 The plugin · 2 Links for everything else · 3 Timed keys and the icon pack

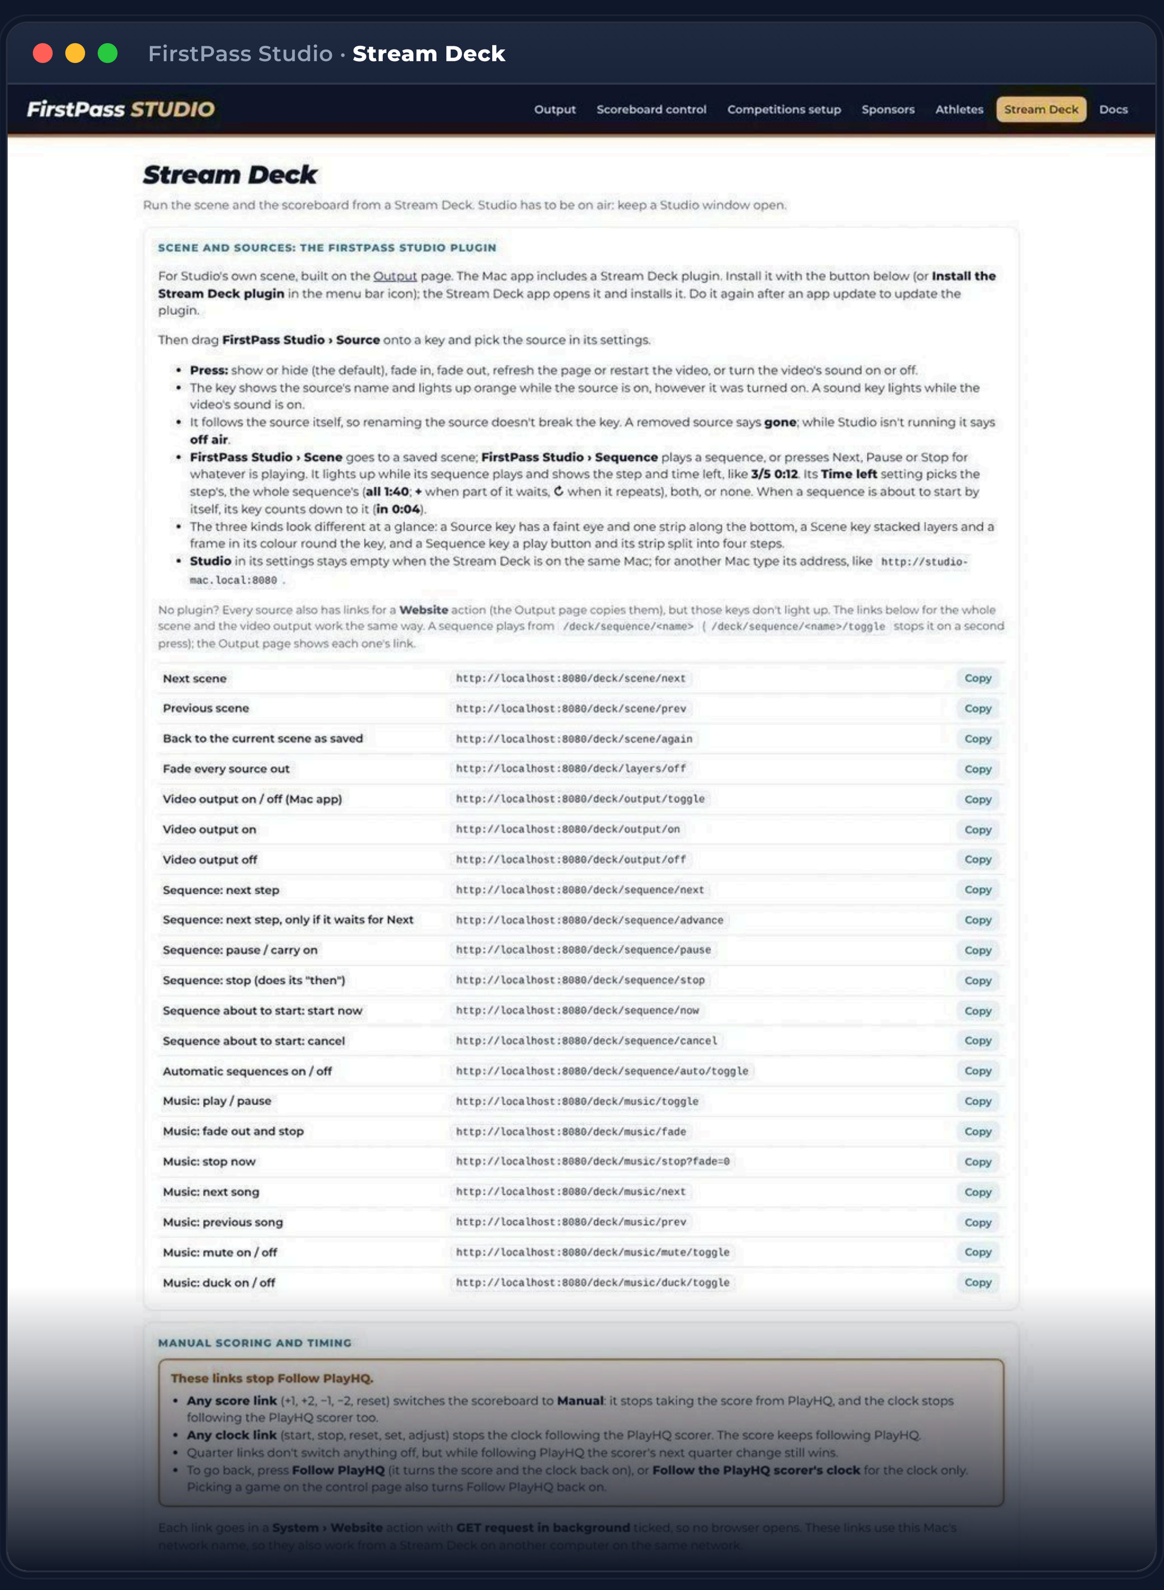

FIG 9.1

The Stream Deck tab: the plugin, the scoring and clock links, and the full reference below them.

9.1 The plugin

Install it from the 1P menu (**Install the Stream Deck plugin**) or the button on the Output page; the Stream Deck app opens and installs it. Do the same after an app update. The **Studio** field in a key's settings stays empty when the Stream Deck is on the same Mac; for another Mac, type its address, like `http://studio-mac.local:8080`. Four kinds of key, each a different shape at a glance:

KEY	LOOKS	PRESS	SHOWS
Source	A faint eye and one strip along the bottom	Show or hide (default), fade in, fade out, refresh the page or restart the video, video sound on or off	The source's name; lit in its output's colour while it's on, however it was turned on
Scene	Stacked layers and a frame in its colour	Go to a scene, next or previous scene, or back to the current scene as saved	Lit while its scene is on, with a yellow dot when sources have changed since
Sequence	A play button and a strip in four steps	Play or stop a sequence, play from the first step, or Next, Next when waiting, Pause and Stop for whatever is playing	Step and time left, like **3/5 0:12**, the whole sequence's time, both or none; **in 0:04** when one is about to start by itself
Switcher	A camera and a strip in two halves	A camera to preview (default) or program, stinger to a camera, Cut, Auto, an upstream or downstream key, Fade to black, run a macro	The camera's name from the switcher; red on program and green on preview, a key or Fade to black red while on air; a yellow dot while the switcher isn't answering

Keys follow their source, scene or sequence by id, so renaming on the Output page doesn't break them; a removed one says **gone**, and while Studio is off air they say **off air**. Colour groups keys by the part of the stream: green pre-game, blue live, purple quarter time, grey post-game, yellow ads, or the scene's or sequence's own colour.

With more than one output, each key has an **Output** setting: the output it shows a source on, plays a scene on or plays a sequence on (a Switcher key has none: there is one switcher). A lit key takes its output's colour (Output 1 orange, 2 pink, 3 blue, 4 green) with a black title, so a commentators' Stream Deck of Commentary keys lights pink while the stream's keys light orange. A key for a removed output says **no output**.

> **Keys follow their source, scene or sequence by id, so renaming on the Output page doesn't break them.**
>
> CHAPTER 9 · STREAM DECK

9.2 Links for everything else

Every control is also a link, for a **System > Website** action (tick **GET request in background**), a Multi Action, or any program on the network. Scoreboard control, the Output page and the Stream Deck tab copy them, with this Mac's Stream Deck key after the port (`…:8080/k/key/deck/…`) so no web page can press them. The Studio plugin needs no key: the first time you press one of its keys the Mac asks you to **Allow** it, and from then on it signs every press with its own key pair. A link without it is refused, so copy any older Website keys' links again from Studio. With more than one Stream Deck, give each its own link set: pick **New link set…** in **Copy links for** on the Stream Deck tab, name it after the Stream Deck, and copy its links from there. If a link gets out, choose **Devices…** in the menu bar icon and press **Make a new key** on that set: its links stop working and you copy them again, while the other Stream Decks carry on. A program on another computer can ask for a key of its own: the Mac asks you to **Allow** or **Deny** it by name and address, and Devices… can take that one away without touching your other keys. The useful ones:

GROUP	LINKS
Scores	Home and away +1, +2, −1, −2; reset to 0; play a super shot or any streak without changing the score.
Scoring mode	Follow PlayHQ, Manual, toggle. Any score key switches to Manual.
Clock	Start, stop, toggle, reset, set to a time, add or take off any amount, follow the PlayHQ clock on or off, quarter length.
Quarter	Q1 to Q4, extra time, next, previous. The clock is separate; pair them in a Multi Action.
Game	Automatic selection on, off, toggle; the court to follow.
Ticker	Faster, slower, normal, a set speed.
Sources	Show, hide, toggle, restart, video sound; every source out; video output on or off.
Scenes	Go to a scene, next, previous, back to the scene as saved.
Sequences	Play, toggle, next, advance (only when waiting), pause, stop, start the one about to start now, cancel it, automatic sequences on or off.
Run order	Play what's next, skip it, clear the list, add a sequence or scene, load a saved order.
Music	Play, pause, resume, stop, fade out, next, previous, load a song or playlist, mute, duck; add `?fade=2` for a 2-second fade.
Sponsors	Play the next sponsor ad due.
Switcher	Cut, auto, stinger (to a camera or what's on preview), fade to black, a camera to preview or program, an upstream or downstream key on, off or toggled, run a macro.

A LAYOUT THAT WORKS Put the scene keys in a row across the top (Pre-game, Live game, Clear), the sequence keys under them with Next when waiting and Stop at the end, and a page of Source keys for the lower thirds and stats. A game run by hand gets a second page: home scores left, away scores right, the clock and quarter keys down the middle.

9.3 Timed keys and the icon pack

A second plugin, **Timed Sequence**, arms a key for a time of day and then presses a list of links with delays between them: reset the board at 18:55 and start the clock at 19:00, say. It is built from the repository. The **FirstPass Studio Characters** icon pack gives Stream Deck keys letters, numbers and symbols in the Studio style, for labelling keys by hand.

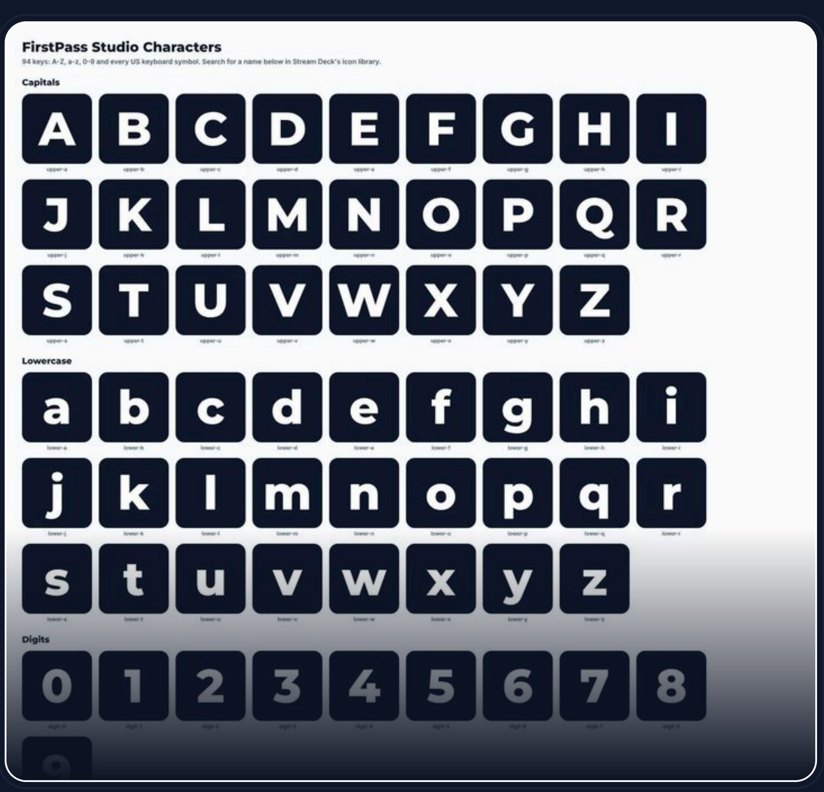

FIG 9.2 The Characters icon pack: A to Z, a to z, 0 to 9 and the usual symbols on navy.

CHAPTER 10 OF 11

Settings and care

Where Studio keeps its settings, how to carry them between Macs and back them up, how updates arrive, and what to do when something isn't right.

1 The 1P menu · 2 The data folder · 3 Settings in iCloud Drive · 4 Backup and restore · 5 Updates · 6 Links and other devices · 7 When something isn't right · 8 Data and bandwidth

10.1 The 1P menu

The menu bar icon is Studio's home. From top to bottom: the version and whether Studio is on air; **Stop Studio** (while on air); **Open Studio**, Scoreboard control, Competition setup and **Copy the Studio link**; **Devices…**, **Install the Stream Deck plugin**; **Open the settings folder**, **Settings folder** (iCloud), **Back up…** and **Restore…**; **Open the debug log**, **Open the app log**, **Restart Studio**, **Check for updates**; **Open at login**, **Appearance** (Follow the Mac, Light, Dark), **Only this Mac can change things**, **What's new…** and Quit.

10.2 The data folder

Everything Studio saves lives in one folder outside the app, `~/Library/Application Support/FirstPass Studio`, so updates never touch it. In it: **competitions/** (a folder per competition with its settings, logos, font, athlete photos and register), **sponsors/**, the scene, sequences, music and playlists, the **media** folder, **control.json** (Scoreboard control's choices), **scoreboard-state.json** (the game, scores and clock, saved every few seconds so a restart mid-game loses nothing), **config.json** for this Mac's own settings, **logs/** and **backups/**.

10.3 Settings in iCloud Drive

Settings folder > Move to iCloud Drive… moves the settings into a folder you choose in iCloud Drive, in a subfolder named after this Mac, so each Mac on the same Apple account keeps its own and none saves over another's. The debug log, scores and clock, caches and window positions always stay on the Mac. **Restore from another Mac…** copies another Mac's settings over this one's (competitions, scenes, sequences, music, control choices), backing this Mac's up first. **Move back to this Mac…** undoes the move. Studio goes off air for a moment for each and comes straight back.

10.4 Backup and restore

Back up… saves every setting in one zip named with the date and time, with notes you type and, if you choose, the media folder; beside it goes a text summary listing the competitions, sequences, playlists, sources, scenes and sponsors inside. **Restore…** shows when and where a backup was made and what it holds, backs up this Mac's settings first, and replaces them only once the whole zip has unpacked and checked out. This Mac keeps its own **Only this Mac can change things** choice, port and link name whatever the backup says. Make a backup after setting up a season and before trying anything new on the Output page.

10.5 Updates

Updates download by themselves and install when the app quits, never mid-stream; **Check for updates** looks now, and **Restart to update** appears when one is ready. If a newer version has come out since that one downloaded, it asks whether to get the newer one first or install the one it named. The first launch after an update shows **What's new**, the changes since the version you last opened. When an update changes how settings are saved, Studio backs the data folder up to **backups/** first; settings saved by a newer Studio open read-only in an older one.

> CHAPTER 10 · SETTINGS AND CARE

10.6 Links and other devices

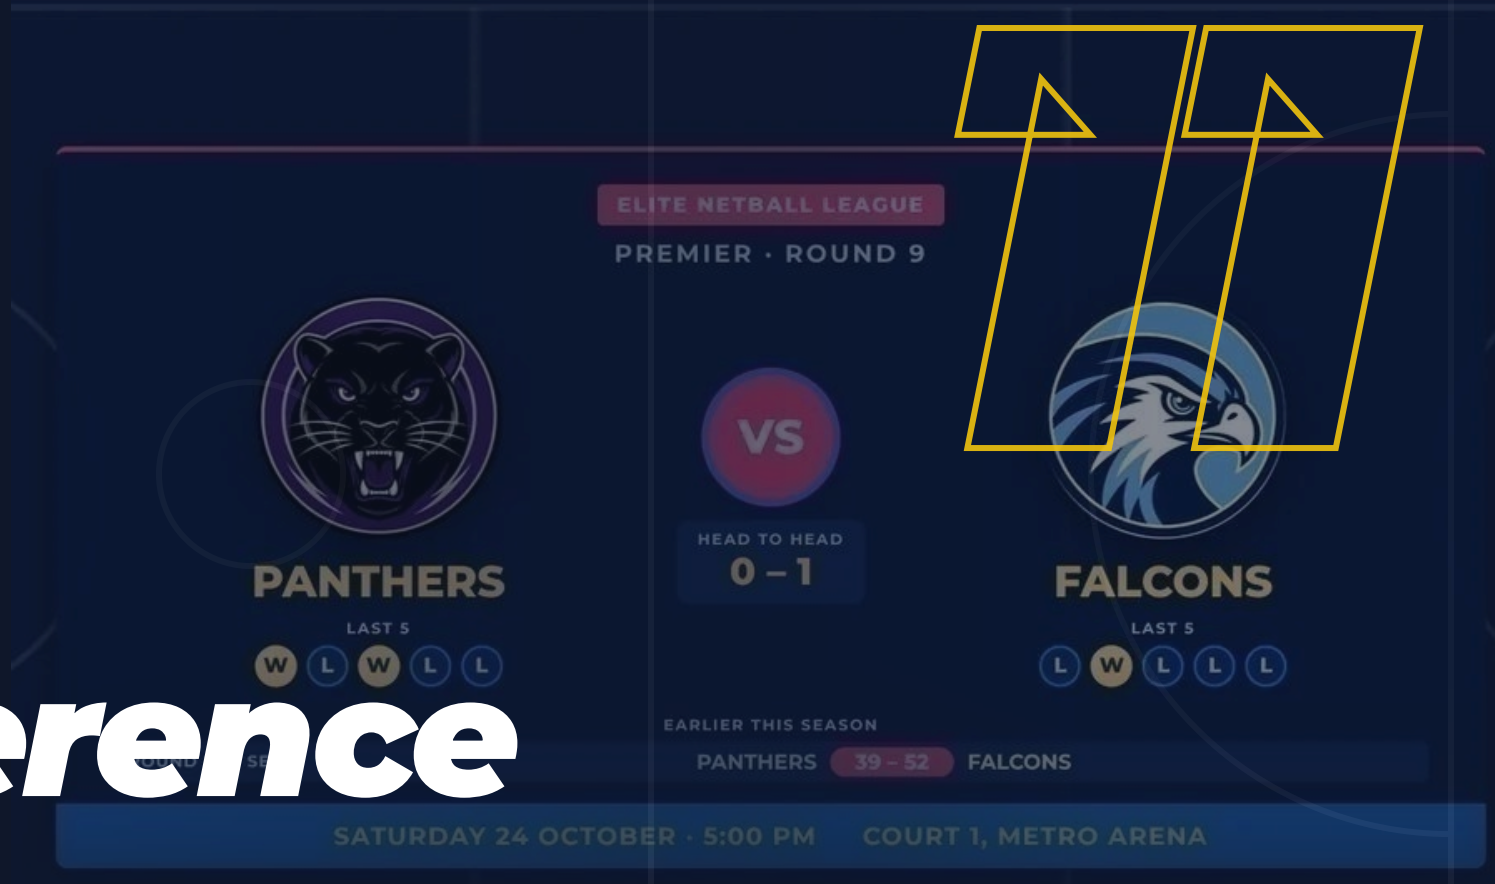
Studio's links use this Mac's Bonjour name (the Local hostname in System Settings > General > Sharing), so the same link works from a phone, another computer or a Stream Deck on the network; `localhost` still works on the Mac. Anything on the network can open the graphics. Only this Mac can change scores, the scene, sequences and settings. **Only this Mac can change things** is ticked every time Studio opens. To score from a phone or let another computer drive, pair it instead: open `/pair.html` on it (the Studio link with `/pair.html` on the end), type a name and press **Ask the Mac**, then choose **Allow scoring only** or **Allow everything** on the Mac. A paired device works with the box ticked, and **Devices…** in the menu bar icon lists it, changes what it may do, or removes it. Unticking the box lets every device on the network in until Studio quits; keep that for emergencies. On a network you don't control, leave it ticked, or block incoming connections to FirstPass Studio in the Mac's firewall.

10.7 When something isn't right

WHAT YOU SEE	WHAT TO DO
The board doesn't move before the game	Normal: nothing is read before the electronic scoring window opens. Scoreboard control says when it will start checking.
The board stops mid-game	PlayHQ isn't answering. Switch to Manual and run it by hand; Follow PlayHQ picks it up again when PlayHQ is back.
The wrong night or game is on	Pick the game night on Scoreboard control and pick the game; tick automatic selection again afterwards.
A key says off air	No Studio window is open. Open Studio from the 1P menu.
A graphic looks stale	Press its Restart key or turn it off and on; with **Load the page fresh** on it reloads each time.
Studio itself stops	**Restart Studio** in the 1P menu brings it back with the scores and clock it had.
Anything else	**Open the debug log** in the 1P menu. Everything Studio does and every PlayHQ answer is in it, 15 MB at most. Send it with a note of the time.

10.8 Data and bandwidth

The graphics only ever talk to Studio on the Mac. Studio alone contacts PlayHQ: one small request every 5 seconds for the followed game (or as set, down to one a second), the ticker's other courts every 30 seconds, the fixture about once a minute for automatic selection, and the rest once when a graphic loads. The Production Planner and the Socials tab read the same fixture, results and ladders through the same cache, and finished games' line ups once, so they add nothing; the Fixture board reads other courts' live scores the ticker's way, so it adds nothing while the ticker is on and at most one request a minute per live game when it isn't. Commentator stats' auto-refresh asks Studio only; its team lists are read at the start and at each quarter break. Finished games are read once and kept. Extra outputs read the same data from Studio, so they add nothing here. It all comes to well under a megabyte an hour, so a phone hotspot is enough for Studio; the stream itself is the bandwidth.



CHAPTER 11 OF 11

Quick reference

1 Keyboard
2 Stream night in nine lines
3 Where things are set

11.1 Keyboard

WHERE	KEYS
Scoreboard control	A / Z home +1 / −1, K / M away +1 / −1, Shift for +2 / −2, Space starts or stops the clock.
Any Studio window	⌘1 to ⌘9 and ⌘0 go to Output, Production Planner, Scoreboard control, Recordings, Socials, Competitions setup, Sponsors, Athletes, Stream Deck, Docs. ⌘N new window, ⇧⌘O open in the browser, ⇧⌘C copy the page link, ⌘[back, ⌥⌘W close every Studio window.

11.2 Stream night in nine lines

01
Open Studio from the 1P menu and keep the Output page open all night.

02
Check the competition in use and the court on Competitions setup.

03
On Scoreboard control, the first game on your court is picked with Follow PlayHQ on.

04
Turn on the video output your switcher takes and show one graphic to see it land.

05
Play a few seconds of music and an animation with sound.

06
Press a Source key and watch the Output page follow it; put scoring back to Follow PlayHQ after testing.

07
Go to the Live game scene and let the sequences run the breaks.

08
Pick finals winners as they happen; turn on lower thirds when people appear.

09
Press Stream close, turn the output off, and send the sponsor report.

11.3 Where things are set

TO CHANGE	GO TO
Colours, font, logos, rules, finals format, court	Competitions setup
Which game, scoring mode, score, clock, finals winners	Scoreboard control
What's on screen, scenes, sequences, playlists, music, mics, outputs	Output
A graphic's options (heading, position, division, animate away)	Output, under the source's address
Sponsors, tiers, ads, moments, the report	Sponsors
Photos, positions, games played	Athletes
Each night's court, the commentators and who calls each game	Production Planner
Keys and links	Stream Deck
Pictures of a game night for social media	Socials
Backups, iCloud, updates, the debug log	The 1P menu
