Broadcast graphics for netball livestreams, fed live from PlayHQ and run from one Mac.

VERSION 1 · OCTOBER 2026 · BY PIVT

ABOUT THIS GUIDE

# Graphics that follow the game.

FirstPass Studio is a Mac app that draws broadcast graphics for a netball livestream and sends them to your vision switcher. The scores, clocks, ladders, fixtures and line-ups come from PlayHQ's public data, so there is nothing to type in during the game.

This guide starts with the way most nights run, one operator and Studio doing the rest, then covers running it by hand, setting up a competition, sponsors, athletes and the Stream Deck.

**5 s**
The live score, quarter and clock read from PlayHQ every 5 seconds while the game is scored.

**31**
Broadcast graphics, from the scoreboard and ladder to the sponsor wall, plus a test pattern.

**17**
Competition logo animations, and six intro and outro styles.

**1**
Operator on a followed night. Sequences run the run-up, the breaks and full time.

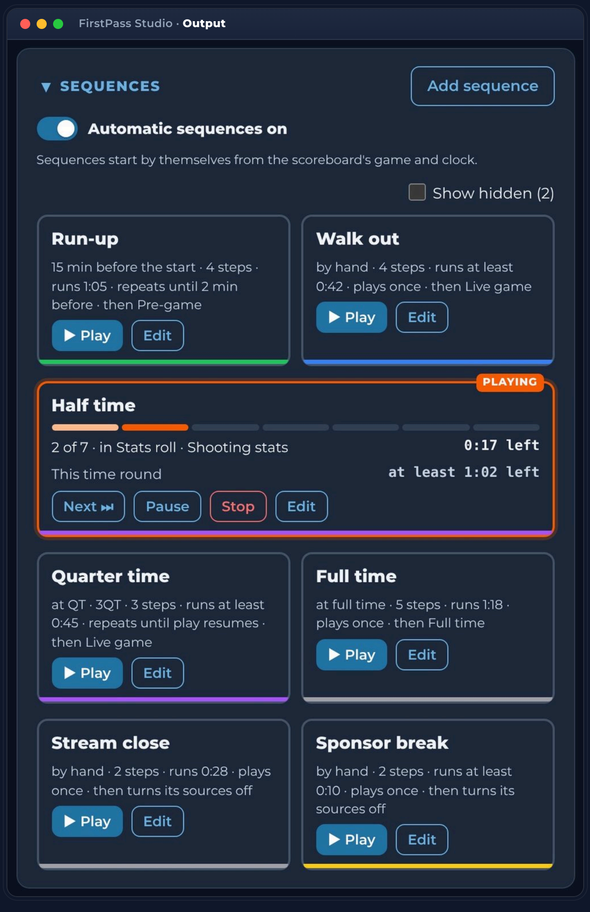
IN
### PlayHQ
The fixture, ladder, line-ups and the live score from the scorer's tablet. No account, no key.

→

ON YOUR MAC
### FirstPass Studio
Builds one 1920 × 1080 scene from layers: the base scene, automatic layers, scenes and sequences.

→

OUT
### Your switcher
A display, a Blackmagic device or NDI, with fill and key or a chroma colour over the cameras.



The Output page runs the show; the super shot plays by itself.

INSIDE

01 **What Studio is** — The app, the words used and the pages you work in.

02 **Getting started** — Install, on air and off air, the 1P menu, the checklist.

03 **Game night, the automated way** — Follow PlayHQ, the base scene, automatic layers, sequences, music, output.

04 **Running it by hand** — Manual scoring and clock, and a two-person crew.

05 **The graphics** — Every graphic, pictured, with the options worth knowing.

06 **Competitions setup** — PlayHQ link, rules, finals, colours, logos, live viewers.

07 **Sponsors** — Tiers, spots, ads, sponsored moments and proof of play.

08 **Athletes** — Photos, silhouettes, positions and games played.

09 **Stream Deck** — The plugin's keys, the links and timed keys.

10 **Settings and care** — Data folder, iCloud, backups, updates and fixes.

11 **Quick reference** — Keyboard, the night in nine lines, where things are set.

**The sample league** — Every screenshot comes from Studio running the fictional Elite Netball League: eight clubs named after animals, three divisions, a live game and fictional sponsors.

CHAPTER 1 OF 11

# What Studio is

01

FirstPass Studio is a Mac app that draws broadcast graphics for a netball livestream and sends them to your vision switcher. The scores, clocks, ladders, fixtures and line-ups come from PlayHQ's public data, so there is nothing to type in during the game.

1. The words used in this guide
2. The pages you work in
3. The sample competition in this guide

Studio does one job on stream night: graphics. Your cameras, switcher and streaming encoder stay as they are. Studio hands the switcher a picture with transparency (fill and key, or a chroma colour) so the graphics sit over the vision.

## 1.1 The words used in this guide

### *Studio*

The whole thing: the Mac app, the pages you work in, and the graphics it puts on screen.

### *On air, off air*

Studio is on air while a Studio window is open. On air it talks to PlayHQ, serves the graphics and answers the Stream Deck. Closing the last window takes it off air.

### *A graphic, or a page*

One thing that can go on screen: the scoreboard, a ladder, a lower third, an animation. Each is a web page that Studio draws.

### *A source*

A graphic placed in the scene, with its own position, options and fade. The scoreboard is one source; a ladder is another.

### *The scene*

Studio's own 1920 × 1080 frame, built from sources switched on and off. It is what the switcher receives.

### *A scene (on the Scenes list)*

A saved look: which sources are on and which are off. "Live game" and "Clear" are scenes.

### *A sequence*

A list of steps played in order from one press: a run-up, a quarter-time break, a full-time wrap.

### *The competition*

Everything that belongs to one league: its PlayHQ link, names, rules, colours, logos, sponsors and athletes. Studio keeps a setup per competition and uses one at a time.

### *The data folder*

Where Studio saves everything, outside the app, so updates never touch it.

## 1.2 The pages you work in

Every Studio window has the same bar at the top, with the FirstPass Studio mark and the tabs in three groups by what you are doing. **Run** is the night itself: **Output**, where the show is built and sent out, and **Scoreboard control**, which runs the board. **Plan** is before the night: the **Production Planner** plans the court and the commentators, and **Socials** makes the night's pictures for social media. **Set up** is done once: **Recordings**, **Competitions setup**, **Sponsors**, **Athletes** and **Devices**. **Docs** sits on its own at the right. In the app, ⌘1 to ⌘9 and ⌘0 go to Output, Production Planner, Scoreboard control, Recordings, Socials, Competitions setup, Sponsors, Athletes, Devices and Docs.

The right of the bar carries the status chips, on every page, so you can see the night from wherever you are: **ON AIR** in orange like a tally light, with a dot per output that is solid in the output's colour while it sends and hollow while it doesn't (or **Off air**); the game on the board, its dot orange before the clock has started, green from the first clock start or score until an hour after the game ends, then grey; PlayHQ, whose dot is the link alone (green when PlayHQ answers, amber when a reading is overdue, red when it keeps failing, grey when scores are by hand) and whose words give the quarter and clock, or **game completed** once PlayHQ closes the game (**full time** when the last quarter is run down by hand); the sequence playing with its step and the time left on it (and what the run order plays after it), the triggered sequence counting down to start or the run order's **Next**, **ATEM** while a switcher is set up (green when it answers, red when it doesn't), and **REC** while a game records (grey while Record games waits for one). The chips are status, not links; the tabs take you to a page.

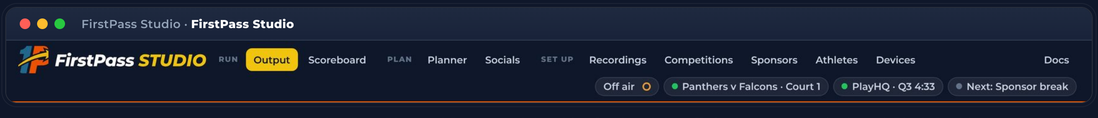


**FIG 1.1** The bar on every page: the tabs grouped as Run, Plan and Set up, and the chips for the night: off air, the game on the board, PlayHQ with the quarter and clock, and what the run order plays next.

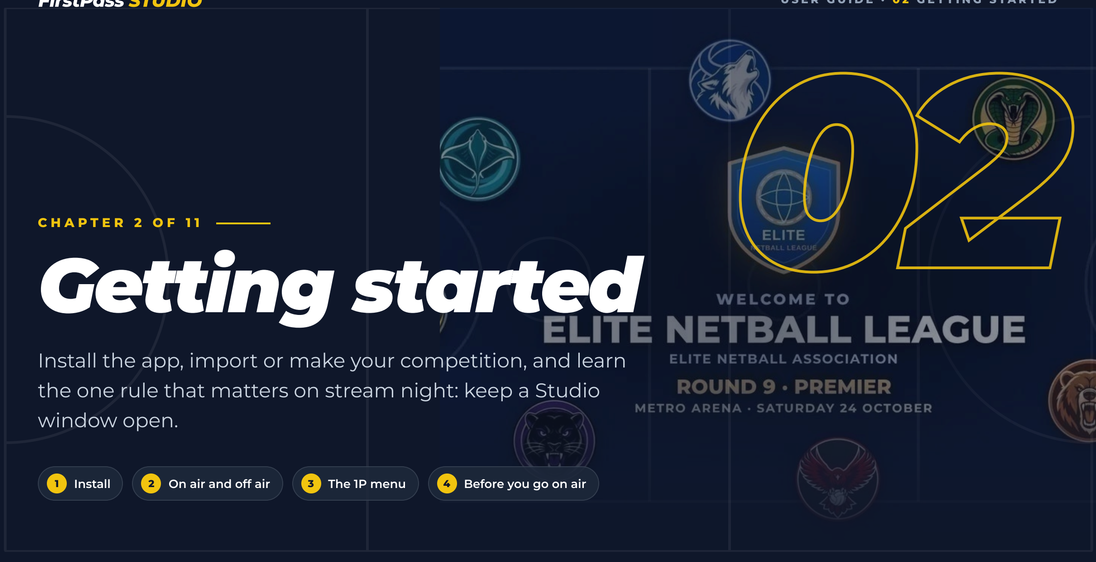
> ***Studio does one job on stream night: graphics.***
>
> CHAPTER 1 · WHAT STUDIO IS

## 1.3 The sample competition in this guide

The screenshots use a fictional league, the **Elite Netball League**, with eight clubs named after animals (Falcons, Panthers, Stingrays, Cobras, Grizzlies, Hawks, Rhinos and Wolves) across Premier, Men's and Under 21 divisions, playing at the Metro Arena. Its sponsors are fictional too. Everything you see is what Studio draws for any competition once its setup is in.



CHAPTER 2 OF 11

# Getting started

Install the app, import or make your competition, and learn the one rule that matters on stream night: keep a Studio window open.

1 Install
2 On air and off air
3 The 1P menu
4 Before you go on air

## 2.1 Install

### 01

Download `FirstPass Studio.dmg`, drag the app to Applications and open it. It runs on Apple silicon Macs (M1 and later).

### 02

The **1P** icon appears in the menu bar, off air. Choose **Open Studio**. A short splash shows, Studio goes on air and the Output page opens in the app's own window.

### 03

Go to **Competitions setup** and either **Import a template file** (your league's `.json`, with its logos and sponsors inside) or **New competition** and fill it in (Chapter 6).

### 04

Back on **Output**, add the graphics you need with **Add page**, and turn on the video output that feeds your switcher (Chapter 3).

## 2.2 On air and off air

The pages zoom like Safari's, for a small screen: **Zoom In** (⌘+), **Zoom Out** (⌘−) and **Actual Size** (⌘⌥0) in the View menu, which shows the level, or a pinch on the trackpad. Every Studio window zooms together and the level is kept on that Mac; while it isn't 100% a chip at the right of the bar shows it, and a click on the chip puts it back. The Docs page has a contents list at the left on a wide window.

Studio only runs while a Studio window is open. Opening one (Open Studio, any page in the 1P menu, or ⌘N) puts it on air; closing the last one takes it off air, and the graphics and Stream Deck get no answer until a window opens again. Closing the last window while on air asks first, and so does ⌘Q, so a stray keypress can't stop a stream. Leave the Output page open all night.

The bar's chips show the game on the board, whether PlayHQ is answering (amber when overdue, red after a minute of errors) and which outputs are on air, on every page; the Output page's status board shows the score and the rest of the night. If anything is wrong, the page you keep open says so.

## 2.3 The 1P menu

The 1P icon in the menu bar is Studio's home: it opens Studio, its pages and this guide, backs the settings up and restores them, and has **Open at login**, **Appearance** (the Studio pages follow the Mac's light or dark look unless pinned here; the graphics never change) and **Check for updates**. Chapter 10 lists every item. Updates download in the background and install when the app quits, never mid-stream.

**LINKS** Studio's links start with the Mac's Bonjour name, such as `http://matts-macbook-pro.local:8080/`, so the same link works from a phone, another computer or a Stream Deck on the same network. `http://localhost:8080` works on the Mac itself.

> ***The one rule that matters on stream night: keep a Studio window open.***

CHAPTER 2 · GETTING STARTED

## 2.4 Before you go on air

### 01

**Open the app.** The Output page opens and Studio goes on air. Keep a window open all night.

### 02

**Right competition.** Competitions setup shows the one in use at the top. Check its PlayHQ link, the court to follow and the scoring window.

### 03

**Right game.** On Scoreboard control, the picked game is tonight's first on your court and Follow PlayHQ is on.

### 04

**Scores arrive.** Once the scorer has started on PlayHQ, the control page says the game is being live scored and the board moves. Nothing is read before the scoring window opens, so a quiet board before then is normal.

### 05

**Scene and output.** On Output, turn on the display, NDI or Blackmagic output your switcher takes, check fill and key or chroma, and show one graphic to see it land.

### 06

**Sound.** Play a few seconds of music and an animation with sound, and check the sound only comes out where you want it.

### 07

**Stream Deck.** Press a Source key and watch the Sources list follow it. A score key switches scoring to Manual, so put it back to Follow PlayHQ after testing.

### 08

**Sponsors.** Tonight's spots and ads are on; the sponsor report starts counting when the output turns on.

# Game night, the automated way

05

Pixellive STUDIO can be used to automate your game nights. Whether you're playing Trivia, Bingo, Pictionary, Charades, or any other game, you can use Pixellive STUDIO to automate the entire experience.

Pixellive STUDIO can be used to automate your game nights. Whether you're playing Trivia, Bingo, Pictionary, Charades, or any other game, you can use Pixellive STUDIO to automate the entire experience.

## How it fits together

**Scoreboard** is the heart of Pixellive STUDIO. It's where you manage your teams, players, and scores. You can also control the timer, sequences, and macros from here. Scoreboard is also where you can see the current state of your game night, and make changes on the fly.

**Timer** is a simple countdown timer that can be used to time rounds, breaks, or anything else you need to time. You can start, stop, and reset the timer from Scoreboard, or from a Stream Deck button.

**Sequences** are a way to automate your game night. You can create a sequence that plays a video, shows a scoreboard, and then starts a timer. You can also create sequences that are triggered by events, like when a player scores a point.

**Macros** are a way to automate your game night. You can create a macro that changes the score, starts the timer, and plays a sound. You can also create macros that are triggered by events, like when a player scores a point.

**Variables** are a way to store information that you can use in your sequences and macros. You can create variables for things like the current round, the current player, or the current score.

**Sounds** are a way to add audio to your game night. You can create sounds for things like when a player scores a point, when the timer starts, or when the timer ends.

**Playlists** are a way to play a series of videos or sounds in a row. You can create playlists for things like intro videos, outro videos, or background music.

**Video output** is a way to display your game night on a screen. You can create video outputs for things like the main screen, the player screens, or the stream.

**Stream Deck** is a way to control your game night with a Stream Deck. You can create buttons for things like starting the timer, changing the score, or playing a sound.

**Keyboard** is a way to control your game night with a keyboard. You can create shortcuts for things like starting the timer, changing the score, or playing a sound.

**Mouse** is a way to control your game night with a mouse. You can create buttons for things like starting the timer, changing the score, or playing a sound.

**Gamepad** is a way to control your game night with a gamepad. You can create buttons for things like starting the timer, changing the score, or playing a sound.

**Midi** is a way to control your game night with a midi device. You can create buttons for things like starting the timer, changing the score, or playing a sound.

**OSC** is a way to control your game night with an OSC device. You can create buttons for things like starting the timer, changing the score, or playing a sound.

**Websockets** is a way to control your game night with a websocket. You can create buttons for things like starting the timer, changing the score, or playing a sound.

**Serial** is a way to control your game night with a serial device. You can create buttons for things like starting the timer, changing the score, or playing a sound.

**Network** is a way to control your game night with a network device. You can create buttons for things like starting the timer, changing the score, or playing a sound.

**Bluetooth** is a way to control your game night with a bluetooth device. You can create buttons for things like starting the timer, changing the score, or playing a sound.

**Audio** is a way to add audio to your game night. You can create sounds for things like when a player scores a point, when the timer starts, or when the timer ends.

**Video** is a way to add video to your game night. You can create videos for things like intro videos, outro videos, or background music.

**Images** is a way to add images to your game night. You can create images for things like the main screen, the player screens, or the stream.

**Text** is a way to add text to your game night. You can create text for things like the current round, the current player, or the current score.

**Data** is a way to store information that you can use in your sequences and macros. You can create data for things like the current round, the current player, or the current score.

**Files** is a way to store information that you can use in your sequences and macros. You can create files for things like the current round, the current player, or the current score.

**Folders** is a way to store information that you can use in your sequences and macros. You can create folders for things like the current round, the current player, or the current score.

**Web** is a way to add web content to your game night. You can create web content for things like the main screen, the player screens, or the stream.

**Cloud** is a way to store information that you can use in your sequences and macros. You can create cloud for things like the current round, the current player, or the current score.

**Email** is a way to send emails from your game night. You can create emails for things like when a player scores a point, when the timer starts, or when the timer ends.

**Notifications** is a way to send notifications from your game night. You can create notifications for things like when a player scores a point, when the timer starts, or when the timer ends.

**Logic** is a way to add logic to your game night. You can create logic for things like when a player scores a point, when the timer starts, or when the timer ends.

**Flow** is a way to add flow to your game night. You can create flow for things like when a player scores a point, when the timer starts, or when the timer ends.

**Events** is a way to add events to your game night. You can create events for things like when a player scores a point, when the timer starts, or when the timer ends.

**Actions** is a way to add actions to your game night. You can create actions for things like when a player scores a point, when the timer starts, or when the timer ends.

**Triggers** is a way to add triggers to your game night. You can create triggers for things like when a player scores a point, when the timer starts, or when the timer ends.

**Conditions** is a way to add conditions to your game night. You can create conditions for things like when a player scores a point, when the timer starts, or when the timer ends.

**Loops** is a way to add loops to your game night. You can create loops for things like when a player scores a point, when the timer starts, or when the timer ends.

**Delays** is a way to add delays to your game night. You can create delays for things like when a player scores a point, when the timer starts, or when the timer ends.

**Timers** is a way to add timers to your game night. You can create timers for things like when a player scores a point, when the timer starts, or when the timer ends.

**Counters** is a way to add counters to your game night. You can create counters for things like when a player scores a point, when the timer starts, or when the timer ends.

**Random** is a way to add random to your game night. You can create random for things like when a player scores a point, when the timer starts, or when the timer ends.

**Math** is a way to add math to your game night. You can create math for things like when a player scores a point, when the timer starts, or when the timer ends.

**Strings** is a way to add strings to your game night. You can create strings for things like when a player scores a point, when the timer starts, or when the timer ends.

**Lists** is a way to add lists to your game night. You can create lists for things like when a player scores a point, when the timer starts, or when the timer ends.

**Dictionaries** is a way to add dictionaries to your game night. You can create dictionaries for things like when a player scores a point, when the timer starts, or when the timer ends.

**Objects** is a way to add objects to your game night. You can create objects for things like when a player scores a point, when the timer starts, or when the timer ends.

**Classes** is a way to add classes to your game night. You can create classes for things like when a player scores a point, when the timer starts, or when the timer ends.

**Functions** is a way to add functions to your game night. You can create functions for things like when a player scores a point, when the timer starts, or when the timer ends.

**Modules** is a way to add modules to your game night. You can create modules for things like when a player scores a point, when the timer starts, or when the timer ends.

**Libraries** is a way to add libraries to your game night. You can create libraries for things like when a player scores a point, when the timer starts, or when the timer ends.

**Plugins** is a way to add plugins to your game night. You can create plugins for things like when a player scores a point, when the timer starts, or when the timer ends.

**Extensions** is a way to add extensions to your game night. You can create extensions for things like when a player scores a point, when the timer starts, or when the timer ends.

**Integrations** is a way to add integrations to your game night. You can create integrations for things like when a player scores a point, when the timer starts, or when the timer ends.

**Automations** is a way to add automations to your game night. You can create automations for things like when a player scores a point, when the timer starts, or when the timer ends.

**Workflows** is a way to add workflows to your game night. You can create workflows for things like when a player scores a point, when the timer starts, or when the timer ends.

**Templates** is a way to add templates to your game night. You can create templates for things like when a player scores a point, when the timer starts, or when the timer ends.

**Presets** is a way to add presets to your game night. You can create presets for things like when a player scores a point, when the timer starts, or when the timer ends.

**Profiles** is a way to add profiles to your game night. You can create profiles for things like when a player scores a point, when the timer starts, or when the timer ends.

**Settings** is a way to add settings to your game night. You can create settings for things like when a player scores a point, when the timer starts, or when the timer ends.

**Preferences** is a way to add preferences to your game night. You can create preferences for things like when a player scores a point, when the timer starts, or when the timer ends.

**Options** is a way to add options to your game night. You can create options for things like when a player scores a point, when the timer starts, or when the timer ends.

**Configurations** is a way to add configurations to your game night. You can create configurations for things like when a player scores a point, when the timer starts, or when the timer ends.

**Customizations** is a way to add customizations to your game night. You can create customizations for things like when a player scores a point, when the timer starts, or when the timer ends.

**Personalizations** is a way to add personalizations to your game night. You can create personalizations for things like when a player scores a point, when the timer starts, or when the timer ends.

**Localizations** is a way to add localizations to your game night. You can create localizations for things like when a player scores a point, when the timer starts, or when the timer ends.

**Translations** is a way to add translations to your game night. You can create translations for things like when a player scores a point, when the timer starts, or when the timer ends.

**Accessibility** is a way to add accessibility to your game night. You can create accessibility for things like when a player scores a point, when the timer starts, or when the timer ends.

**Performance** is a way to add performance to your game night. You can create performance for things like when a player scores a point, when the timer starts, or when the timer ends.

**Optimization** is a way to add optimization to your game night. You can create optimization for things like when a player scores a point, when the timer starts, or when the timer ends.

**Debugging** is a way to add debugging to your game night. You can create debugging for things like when a player scores a point, when the timer starts, or when the timer ends.

**Testing** is a way to add testing to your game night. You can create testing for things like when a player scores a point, when the timer starts, or when the timer ends.

**Deployment** is a way to add deployment to your game night. You can create deployment for things like when a player scores a point, when the timer starts, or when the timer ends.

**Monitoring** is a way to add monitoring to your game night. You can create monitoring for things like when a player scores a point, when the timer starts, or when the timer ends.

**Analytics** is a way to add analytics to your game night. You can create analytics for things like when a player scores a point, when the timer starts, or when the timer ends.

**Reporting** is a way to add reporting to your game night. You can create reporting for things like when a player scores a point, when the timer starts, or when the timer ends.

**Feedback** is a way to add feedback to your game night. You can create feedback for things like when a player scores a point, when the timer starts, or when the timer ends.

**Support** is a way to add support to your game night. You can create support for things like when a player scores a point, when the timer starts, or when the timer ends.

**Documentation** is a way to add documentation to your game night. You can create documentation for things like when a player scores a point, when the timer starts, or when the timer ends.

**Community** is a way to add community to your game night. You can create community for things like when a player scores a point, when the timer starts, or when the timer ends.

**Forums** is a way to add forums to your game night. You can create forums for things like when a player scores a point, when the timer starts, or when the timer ends.

**Chat** is a way to add chat to your game night. You can create chat for things like when a player scores a point, when the timer starts, or when the timer ends.

**Video** is a way to add video to your game night. You can create video for things like when a player scores a point, when the timer starts, or when the timer ends.

**Tutorials** is a way to add tutorials to your game night. You can create tutorials for things like when a player scores a point, when the timer starts, or when the timer ends.

**Examples** is a way to add examples to your game night. You can create examples for things like when a player scores a point, when the timer starts, or when the timer ends.

**Demos** is a way to add demos to your game night. You can create demos for things like when a player scores a point, when the timer starts, or when the timer ends.

**Showcases** is a way to add showcases to your game night. You can create showcases for things like when a player scores a point, when the timer starts, or when the timer ends.

**Contests** is a way to add contests to your game night. You can create contests for things like when a player scores a point, when the timer starts, or when the timer ends.

**Events** is a way to add events to your game night. You can create events for things like when a player scores a point, when the timer starts, or when the timer ends.

**Meetups** is a way to add meetups to your game night. You can create meetups for things like when a player scores a point, when the timer starts, or when the timer ends.

**Conferences** is a way to add conferences to your game night. You can create conferences for things like when a player scores a point, when the timer starts, or when the timer ends.

**Workshops** is a way to add workshops to your game night. You can create workshops for things like when a player scores a point, when the timer starts, or when the timer ends.

**Training** is a way to add training to your game night. You can create training for things like when a player scores a point, when the timer starts, or when the timer ends.

**Certification** is a way to add certification to your game night. You can create certification for things like when a player scores a point, when the timer starts, or when the timer ends.

**Partnerships** is a way to add partnerships to your game night. You can create partnerships for things like when a player scores a point, when the timer starts, or when the timer ends.

**Sponsorships** is a way to add sponsorships to your game night. You can create sponsorships for things like when a player scores a point, when the timer starts, or when the timer ends.

**Donations** is a way to add donations to your game night. You can create donations for things like when a player scores a point, when the timer starts, or when the timer ends.

**Merchandise** is a way to add merchandise to your game night. You can create merchandise for things like when a player scores a point, when the timer starts, or when the timer ends.

**Swag** is a way to add swag to your game night. You can create swag for things like when a player scores a point, when the timer starts, or when the timer ends.

**Stickers** is a way to add stickers to your game night. You can create stickers for things like when a player scores a point, when the timer starts, or when the timer ends.

**Posters** is a way to add posters to your game night. You can create posters for things like when a player scores a point, when the timer starts, or when the timer ends.

**Books** is a way to add books to your game night. You can create books for things like when a player scores a point, when the timer starts, or when the timer ends.

**Courses** is a way to add courses to your game night. You can create courses for things like when a player scores a point, when the timer starts, or when the timer ends.

**Podcasts** is a way to add podcasts to your game night. You can create podcasts for things like when a player scores a point, when the timer starts, or when the timer ends.

**Blogs** is a way to add blogs to your game night. You can create blogs for things like when a player scores a point, when the timer starts, or when the timer ends.

**Newsletters** is a way to add newsletters to your game night. You can create newsletters for things like when a player scores a point, when the timer starts, or when the timer ends.

**Social media** is a way to add social media to your game night. You can create social media for things like when a player scores a point, when the timer starts, or when the timer ends.

**Press** is a way to add press to your game night. You can create press for things like when a player scores a point, when the timer starts, or when the timer ends.

**Media** is a way to add media to your game night. You can create media for things like when a player scores a point, when the timer starts, or when the timer ends.

**Interviews** is a way to add interviews to your game night. You can create interviews for things like when a player scores a point, when the timer starts, or when the timer ends.

**Reviews** is a way to add reviews to your game night. You can create reviews for things like when a player scores a point, when the timer starts, or when the timer ends.

**Testimonials** is a way to add testimonials to your game night. You can create testimonials for things like when a player scores a point, when the timer starts, or when the timer ends.

**Case studies** is a way to add case studies to your game night. You can create case studies for things like when a player scores a point, when the timer starts, or when the timer ends.

**Success stories** is a way to add success stories to your game night. You can create success stories for things like when a player scores a point, when the timer starts, or when the timer ends.

**Roadmap** is a way to add roadmap to your game night. You can create roadmap for things like when a player scores a point, when the timer starts, or when the timer ends.

**Changelog** is a way to add changelog to your game night. You can create changelog for things like when a player scores a point, when the timer starts, or when the timer ends.

**Release notes** is a way to add release notes to your game night. You can create release notes for things like when a player scores a point, when the timer starts, or when the timer ends.

**Beta** is a way to add beta to your game night. You can create beta for things like when a player scores a point, when the timer starts, or when the timer ends.

**Alpha** is a way to add alpha to your game night. You can create alpha for things like when a player scores a point, when the timer starts, or when the timer ends.

**Nightly** is a way to add nightly to your game night. You can create nightly for things like when a player scores a point, when the timer starts, or when the timer ends.

**Stable** is a way to add stable to your game night. You can create stable for things like when a player scores a point, when the timer starts, or when the timer ends.

**Long-term support** is a way to add long-term support to your game night. You can create long-term support for things like when a player scores a point, when the timer starts, or when the timer ends.

**Enterprise** is a way to add enterprise to your game night. You can create enterprise for things like when a player scores a point, when the timer starts, or when the timer ends.

**Pro** is a way to add pro to your game night. You can create pro for things like when a player scores a point, when the timer starts, or when the timer ends.

**Free** is a way to add free to your game night. You can create free for things like when a player scores a point, when the timer starts, or when the timer ends.

**Open source** is a way to add open source to your game night. You can create open source for things like when a player scores a point, when the timer starts, or when the timer ends.

**Closed source** is a way to add closed source to your game night. You can create closed source for things like when a player scores a point, when the timer starts, or when the timer ends.

**Proprietary** is a way to add proprietary to your game night. You can create proprietary for things like when a player scores a point, when the timer starts, or when the timer ends.

**Licensing** is a way to add licensing to your game night. You can create licensing for things like when a player scores a point, when the timer starts, or when the timer ends.

**Pricing** is a way to add pricing to your game night. You can create pricing for things like when a player scores a point, when the timer starts, or when the timer ends.

**Subscriptions** is a way to add subscriptions to your game night. You can create subscriptions for things like when a player scores a point, when the timer starts, or when the timer ends.

**One-time purchases** is a way to add one-time purchases to your game night. You can create one-time purchases for things like when a player scores a point, when the timer starts, or when the timer ends.

**Refunds** is a way to add refunds to your game night. You can create refunds for things like when a player scores a point, when the timer starts, or when the timer ends.

**Cancellations** is a way to add cancellations to your game night. You can create cancellations for things like when a player scores a point, when the timer starts, or when the timer ends.

**Upgrades** is a way to add upgrades to your game night. You can create upgrades for things like when a player scores a point, when the timer starts, or when the timer ends.

**Downgrades** is a way to add downgrades to your game night. You can create downgrades for things like when a player scores a point, when the timer starts, or when the timer ends.

**Trials** is a way to add trials to your game night. You can create trials for things like when a player scores a point, when the timer starts, or when the timer ends.

**Demos** is a way to add demos to your game night. You can create demos for things like when a player scores a point, when the timer starts, or when the timer ends.

**Sandbox** is a way to add sandbox to your game night. You can create sandbox for things like when a player scores a point, when the timer starts, or when the timer ends.

**Playground** is a way to add playground to your game night. You can create playground for things like when a player scores a point, when the timer starts, or when the timer ends.

> *A sequence can start by itself from no game's clock, very much, and hand over to another sequence.*

### Scoreboard control

Scoreboard control

The Scoreboard control is the heart of Pixellive STUDIO. It's where you manage your teams, players, and scores. You can also control the timer, sequences, and macros from here. Scoreboard is also where you can see the current state of your game night, and make changes on the fly.

The Scoreboard control is a simple countdown timer that can be used to time rounds, breaks, or anything else you need to time. You can start, stop, and reset the timer from Scoreboard, or from a Stream Deck button.

Sequences are a way to automate your game night. You can create a sequence that plays a video, shows a scoreboard, and then starts a timer. You can also create sequences that are triggered by events, like when a player scores a point.

Macros are a way to automate your game night. You can create a macro that changes the score, starts the timer, and plays a sound. You can also create macros that are triggered by events, like when a player scores a point.

Variables are a way to store information that you can use in your sequences and macros. You can create variables for things like the current round, the current player, or the current score.

Sounds are a way to add audio to your game night. You can create sounds for things like when a player scores a point, when the timer starts, or when the timer ends.

Playlists are a way to play a series of videos or sounds in a row. You can create playlists for things like intro videos, outro videos, or background music.

Video output is a way to display your game night on a screen. You can create video outputs for things like the main screen, the player screens, or the stream.

Stream Deck is a way to control your game night with a Stream Deck. You can create buttons for things like starting the timer, changing the score, or playing a sound.

Keyboard is a way to control your game night with a keyboard. You can create shortcuts for things like starting the timer, changing the score, or playing a sound.

Mouse is a way to control your game night with a mouse. You can create buttons for things like starting the timer, changing the score, or playing a sound.

Gamepad is a way to control your game night with a gamepad. You can create buttons for things like starting the timer, changing the score, or playing a sound.

Midi is a way to control your game night with a midi device. You can create buttons for things like starting the timer, changing the score, or playing a sound.

OSC is a way to control your game night with an OSC device. You can create buttons for things like starting the timer, changing the score, or playing a sound.

Websockets is a way to control your game night with a websocket. You can create buttons for things like starting the timer, changing the score, or playing a sound.

Serial is a way to control your game night with a serial device. You can create buttons for things like starting the timer, changing the score, or playing a sound.

Network is a way to control your game night with a network device. You can create buttons for things like starting the timer, changing the score, or playing a sound.

Bluetooth is a way to control your game night with a bluetooth device. You can create buttons for things like starting the timer, changing the score, or playing a sound.

Audio is a way to add audio to your game night. You can create sounds for things like when a player scores a point, when the timer starts, or when the timer ends.

Video is a way to add video to your game night. You can create videos for things like intro videos, outro videos, or background music.

Images is a way to add images to your game night. You can create images for things like the main screen, the player screens, or the stream.

Text is a way to add text to your game night. You can create text for things like the current round, the current player, or the current score.

Data is a way to store information that you can use in your sequences and macros. You can create data for things like the current round, the current player, or the current score.

Files is a way to store information that you can use in your sequences and macros. You can create files for things like the current round, the current player, or the current score.

Folders is a way to store information that you can use in your sequences and macros. You can create folders for things like the current round, the current player, or the current score.

Web is a way to add web content to your game night. You can create web content for things like the main screen, the player screens, or the stream.

Cloud is a way to store information that you can use in your sequences and macros. You can create cloud for things like the current round, the current player, or the current score.

Email is a way to send emails from your game night. You can create emails for things like when a player scores a point, when the timer starts, or when the timer ends.

Notifications is a way to send notifications from your game night. You can create notifications for things like when a player scores a point, when the timer starts, or when the timer ends.

Logic is a way to add logic to your game night. You can create logic for things like when a player scores a point, when the timer starts, or when the timer ends.

Flow is a way to add flow to your game night. You can create flow for things like when a player scores a point, when the timer starts, or when the timer ends.

Events is a way to add events to your game night. You can create events for things like when a player scores a point, when the timer starts, or when the timer ends.

Actions is a way to add actions to your game night. You can create actions for things like when a player scores a point, when the timer starts, or when the timer ends.

Triggers is a way to add triggers to your game night. You can create triggers for things like when a player scores a point, when the timer starts, or when the timer ends.

Conditions is a way to add conditions to your game night. You can create conditions for things like when a player scores a point, when the timer starts, or when the timer ends.

Loops is a way to add loops to your game night. You can create loops for things like when a player scores a point, when the timer starts, or when the timer ends.

Delays is a way to add delays to your game night. You can create delays for things like when a player scores a point, when the timer starts, or when the timer ends.

Timers is a way to add timers to your game night. You can create timers for things like when a player scores a point, when the timer starts, or when the timer ends.

Counters is a way to add counters to your game night. You can create counters for things like when a player scores a point, when the timer starts, or when the timer ends.

Random is a way to add random to your game night. You can create random for things like when a player scores a point, when the timer starts, or when the timer ends.

Math is a way to add math to your game night. You can create math for things like when a player scores a point, when the timer starts, or when the timer ends.

Strings is a way to add strings to your game night. You can create strings for things like when a player scores a point, when the timer starts, or when the timer ends.

Lists is a way to add lists to your game night. You can create lists for things like when a player scores a point, when the timer starts, or when the timer ends.

Dictionaries is a way to add dictionaries to your game night. You can create dictionaries for things like when a player scores a point, when the timer starts, or when the timer ends.

Objects is a way to add objects to your game night. You can create objects for things like when a player scores a point, when the timer starts, or when the timer ends.

Classes is a way to add classes to your game night. You can create classes for things like when a player scores a point, when the timer starts, or when the timer ends.

Functions is a way to add functions to your game night. You can create functions for things like when a player scores a point, when the timer starts, or when the timer ends.

Modules is a way to add modules to your game night. You can create modules for things like when a player scores a point, when the timer starts, or when the timer ends.

Libraries is a way to add libraries to your game night. You can create libraries for things like when a player scores a point, when the timer starts, or when the timer ends.

Plugins is a way to add plugins to your game night. You can create plugins for things like when a player scores a point, when the timer starts, or when the timer ends.

Extensions is a way to add extensions to your game night. You can create extensions for things like when a player scores a point, when the timer starts, or when the timer ends.

Integrations is a way to add integrations to your game night. You can create integrations for things like when a player scores a point, when the timer starts, or when the timer ends.

Automations is a way to add automations to your game night. You can create automations for things like when a player scores a point, when the timer starts, or when the timer ends.

Workflows is a way to add workflows to your game night. You can create workflows for things like when a player scores a point, when the timer starts, or when the timer ends.

Templates is a way to add templates to your game night. You can create templates for things like when a player scores a point, when the timer starts, or when the timer ends.

Presets is a way to add presets to your game night. You can create presets for things like when a player scores a point, when the timer starts, or when the timer ends.

Profiles is a way to add profiles to your game night. You can create profiles for things like when a player scores a point, when the timer starts, or when the timer ends.

Settings is a way to add settings to your game night. You can create settings for things like when a player scores a point, when the timer starts, or when the timer ends.

Preferences is a way to add preferences to your game night. You can create preferences for things like when a player scores a point, when the timer starts, or when the timer ends.

Options is a way to add options to your game night. You can create options for things like when a player scores a point, when the timer starts, or when the timer ends.

Configurations is a way to add configurations to your game night. You can create configurations for things like when a player scores a point, when the timer starts, or when the timer ends.

Customizations is a way to add customizations to your game night. You can create customizations for things like when a player scores a point, when the timer starts, or when the timer ends.

Personalizations is a way to add personalizations to your game night. You can create personalizations for things like when a player scores a point, when the timer starts, or when the timer ends.

Localizations is a way to add localizations to your game night. You can create localizations for things like when a player scores a point, when the timer starts, or when the timer ends.

Translations is a way to add translations to your game night. You can create translations for things like when a player scores a point, when the timer starts, or when the timer ends.

Accessibility is a way to add accessibility to your game night. You can create accessibility for things like when a player scores a point, when the timer starts, or when the timer ends.

Performance is a way to add performance to your game night. You can create performance for things like when a player scores a point, when the timer starts, or when the timer ends.

Optimization is a way to add optimization to your game night. You can create optimization for things like when a player scores a point, when the timer starts, or when the timer ends.

Debugging is a way to add debugging to your game night. You can create debugging for things like when a player scores a point, when the timer starts, or when the timer ends.

Testing is a way to add testing to your game night. You can create testing for things like when a player scores a point, when the timer starts, or when the timer ends.

Deployment is a way to add deployment to your game night. You can create deployment for things like when a player scores a point, when the timer starts, or when the timer ends.

Monitoring is a way to add monitoring to your game night. You can create monitoring for things like when a player scores a point, when the timer starts, or when the timer ends.

Analytics is a way to add analytics to your game night. You can create analytics for things like when a player scores a point, when the timer starts, or when the timer ends.

Reporting is a way to add reporting to your game night. You can create reporting for things like when a player scores a point, when the timer starts, or when the timer ends.

Feedback is a way to add feedback to your game night. You can create feedback for things like when a player scores a point, when the timer starts, or when the timer ends.

Support is a way to add support to your game night. You can create support for things like when a player scores a point, when the timer starts, or when the timer ends.

Documentation is a way to add documentation to your game night. You can create documentation for things like when a player scores a point, when the timer starts, or when the timer ends.

Community is a way to add community to your game night. You can create community for things like when a player scores a point, when the timer starts, or when the timer ends.

Forums is a way to add forums to your game night. You can create forums for things like when a player scores a point, when the timer starts, or when the timer ends.

Chat is a way to add chat to your game night. You can create chat for things like when a player scores a point, when the timer starts, or when the timer ends.

Video is a way to add video to your game night. You can create video for things like when a player scores a point, when the timer starts, or when the timer ends.

Tutorials is a way to add tutorials to your game night. You can create tutorials for things like when a player scores a point, when the timer starts, or when the timer ends.

Examples is a way to add examples to your game night. You can create examples for things like when a player scores a point, when the timer starts, or when the timer ends.

Demos is a way to add demos to your game night. You can create demos for things like when a player scores a point, when the timer starts, or when the timer ends.

Showcases is a way to add showcases to your game night. You can create showcases for things like when a player scores a point, when the timer starts, or when the timer ends.

Contests is a way to add contests to your game night. You can create contests for things like when a player scores a point, when the timer starts, or when the timer ends.

Events is a way to add events to your game night. You can create events for things like when a player scores a point, when the timer starts, or when the timer ends.

Meetups is a way to add meetups to your game night. You can create meetups for things like when a player scores a point, when the timer starts, or when the timer ends.

Conferences is a way to add conferences to your game night. You can create conferences for things like when a player scores a point, when the timer starts, or when the timer ends.

Workshops is a way to add workshops to your game night. You can create workshops for things like when a player scores a point, when the timer starts, or when the timer ends.

Training is a way to add training to your game night. You can create training for things like when a player scores a point, when the timer starts, or when the timer ends.

Certification is a way to add certification to your game night. You can create certification for things like when a player scores a point, when the timer starts, or when the timer ends.

Partnerships is a way to add partnerships to your game night. You can create partnerships for things like when a player scores a point, when the timer starts, or when the timer ends.

Sponsorships is a way to add sponsorships to your game night. You can create sponsorships for things like when a player scores a point, when the timer starts, or when the timer ends.

Donations is a way to add donations to your game night. You can create donations for things like when a player scores a point, when the timer starts, or when the timer ends.

Merchandise is a way to add merchandise to your game night. You can create merchandise for things like when a player scores a point, when the timer starts, or when the timer ends.

Swag is a way to add swag to your game night. You can create swag for things like when a player scores a point, when the timer starts, or when the timer ends.

Stickers is a way to add stickers to your game night. You can create stickers for things like when a player scores a point, when the timer starts, or when the timer ends.

Posters is a way to add posters to your game night. You can create posters for things like when a player scores a point, when the timer starts, or when the timer ends.

Books is a way to add books to your game night. You can create books for things like when a player scores a point, when the timer starts, or when the timer ends.

Courses is a way to add courses to your game night. You can create courses for things like when a player scores a point, when the timer starts, or when the timer ends.

Podcasts is a way to add podcasts to your game night. You can create podcasts for things like when a player scores a point, when the timer starts, or when the timer ends.

Blogs is a way to add blogs to your game night. You can create blogs for things like when a player scores a point, when the timer starts, or when the timer ends.

Newsletters is a way to add newsletters to your game night. You can create newsletters for things like when a player scores a point, when the timer starts, or when the timer ends.

Social media is a way to add social media to your game night. You can create social media for things like when a player scores a point, when the timer starts, or when the timer ends.

Press is a way to add press to your game night. You can create press for things like when a player scores a point, when the timer starts, or when the timer ends.

Media is a way to add media to your game night. You can create media for things like when a player scores a point, when the timer starts, or when the timer ends.

Interviews is a way to add interviews to your game night. You can create interviews for things like when a player scores a point, when the timer starts, or when the timer ends.

Reviews is a way to add reviews to your game night. You can create reviews for things like when a player scores a point, when the timer starts, or when the timer ends.

Testimonials is a way to add testimonials to your game night. You can create testimonials for things like when a player scores a point, when the timer starts, or when the timer ends.

Case studies is a way to add case studies to your game night. You can create case studies for things like when a player scores a point, when the timer starts, or when the timer ends.

Success stories is a way to add success stories to your game night. You can create success stories for things like when a player scores a point, when the timer starts, or when the timer ends.

Roadmap is a way to add roadmap to your game night. You can create roadmap for things like when a player scores a point, when the timer starts, or when the timer ends.

Changelog is a way to add changelog to your game night. You can create changelog for things like when a player scores a point, when the timer starts, or when the timer ends.

Release notes is a way to add release notes to your game night. You can create release notes for things like when a player scores a point, when the timer starts, or when the timer ends.

Beta is a way to add beta to your game night. You can create beta for things like when a player scores a point, when the timer starts, or when the timer ends.

Alpha is a way to add alpha to your game night. You can create alpha for things like when a player scores a point, when the timer starts, or when the timer ends.

Nightly is a way to add nightly to your game night. You can create nightly for things like when a player scores a point, when the timer starts, or when the timer ends.

Stable is a way to add stable to your game night. You can create stable for things like when a player scores a point, when the timer starts, or when the timer ends.

Long-term support is a way to add long-term support to your game night. You can create long-term support for things like when a player scores a point, when the timer starts, or when the timer ends.

Enterprise is a way to add enterprise to your game night. You can create enterprise for things like when a player scores a point, when the timer starts, or when the timer ends.

Pro is a way to add pro to your game night. You can create pro for things like when a player scores a point, when the timer starts, or when the timer ends.

Free is a way to add free to your game night. You can create free for things like when a player scores a point, when the timer starts, or when the timer ends.

Open source is a way to add open source to your game night. You can create open source for things like when a player scores a point, when the timer starts, or when the timer ends.

Closed source is a way to add closed source to your game night. You can create closed source for things like when a player scores a point, when the timer starts, or when the timer ends.

Proprietary is a way to add proprietary to your game night. You can create proprietary for things like when a player scores a point, when the timer starts, or when the timer ends.

Licensing is a way to add licensing to your game night. You can create licensing for things like when a player scores a point, when the timer starts, or when the timer ends.

Pricing is a way to add pricing to your game night. You can create pricing for things like when a player scores a point, when the timer starts, or when the timer ends.

Subscriptions is a way to add subscriptions to your game night. You can create subscriptions for things like when a player scores a point, when the timer starts, or when the timer ends.

One-time purchases is a way to add one-time purchases to your game night. You can create one-time purchases for things like when a player scores a point, when the timer starts, or when the timer ends.

Refunds is a way to add refunds to your game night. You can create refunds for things like when a player scores a point, when the timer starts, or when the timer ends.

Cancellations is a way to add cancellations to your game night. You can create cancellations for things like when a player scores a point, when the timer starts, or when the timer ends.

Upgrades is a way to add upgrades to your game night. You can create upgrades for things like when a player scores a point, when the timer starts, or when the timer ends.

Downgrades is a way to add downgrades to your game night. You can create downgrades for things like when a player scores a point, when the timer starts, or when the timer ends.

Trials is a way to add trials to your game night. You can create trials for things like when a player scores a point, when the timer starts, or when the timer ends.

Demos is a way to add demos to your game night. You can create demos for things like when a player scores a point, when the timer starts, or when the timer ends.

Sandbox is a way to add sandbox to your game night. You can create sandbox for things like when a player scores a point, when the timer starts, or when the timer ends.

Playground is a way to add playground to your game night. You can create playground for things like when a player scores a point, when the timer starts, or when the timer ends.

CHAPTER 4 OF 11

# Running it by hand

When nobody is live-scoring the game on PlayHQ, or PlayHQ stops answering mid-game, every automatic part of Chapter 3 has a button. The board, the breaks and the celebrations can all be driven from Scoreboard control and a Stream Deck.

1 Two people, not one · 2 Switching to manual · 3 The score · 4 The clock and the quarter · 5 Breaks and celebrations by hand · 6 Finals

Studio still needs the competition on PlayHQ for its fixture, ladder, squads and results; what changes in manual mode is who runs the score and the clock. The same competition can be followed one week and run by hand the next, and nothing on the Output page changes between the two.

## 4.1 Two people, not one

A followed game can be run by one person because the score, the clock and the breaks take care of themselves. A game run by hand is a different job: someone has to press a key for every goal within a second or two of it, start and stop the clock with the umpire's whistle, and still call the breaks and the graphics. We recommend two people share it:

### Camera operator

- Frames and follows play on the cameras, and cuts between them on the switcher.
- Runs the game clock from the whistle, with **Start / Stop** and **Reset clock** keys beside the camera controls.
- Scores the goals as they go in, **+1** or **+2**, because they are already watching the ring.
- Nothing else: no graphics, no breaks, no music.

### Production manager

- Keeps the Output page open and watches the stream itself, not the court.
- Corrects the score (**−1**, **−2**) and the quarter, and sets the clock when it drifts from the venue's.
- Plays the run-up, break and full time sequences from their keys, and the lower thirds, ladders and stats during play.
- Runs the music, the sponsor ads and the end of night, and picks the finals winners.

If one person must do it alone, keep the Stream Deck to the score and clock keys and let the sequences do the breaks, exactly as they do in automated mode: the game triggers follow the scoreboard's clock whoever runs it.

> ***If one person must do it alone, keep the Stream Deck to the score and clock keys and let the sequences do the breaks.***
>
> CHAPTER 4 · RUNNING IT BY HAND

## 4.2 Switching to manual

Press **Manual** on Scoreboard control, or just press any score key: either switches the board to manual scoring and stops following the PlayHQ clock as well. Press **Follow PlayHQ** to go back; the score catches up with PlayHQ on the next check and the clock follows the scorer's again.

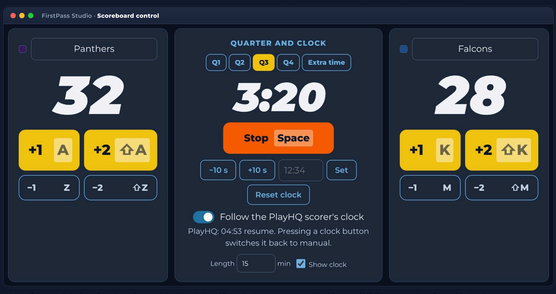

**FIG 4.1** Score and clock on Scoreboard control. Keyboard: A and Z for the home team, K and M for away, Shift for a super shot, Space for the clock.

**WHEN PLAYHQ DROPS OUT** If PlayHQ stops answering during a followed game, the scoreboard keeps its last score, the ladder, fixtures and game list keep what they last read, and the debug log records each failed read. Switch to Manual and run the board by hand; Follow PlayHQ picks it up again when PlayHQ is back, and corrects the score to the scorer's.

## 4.3 The score

Each team has **+1**, **+2**, **−1** and **−2**. A +2 is a super shot: it scores two and plays the super shot celebration, so a +2 pressed by mistake is fixed with −2 (which plays nothing). **Reset scores to 0** clears both. The hot streaks and game moments still play in manual mode, because Studio works out the goal order from the presses just as it does from PlayHQ's score.

| KEY | WHAT IT DOES |
|---|---|
| **Home +1 / Away +1** | A goal. |
| **Home +2 / Away +2** | A super shot: two points and the celebration. |
| **−1, −2** | Take a goal or a super shot back, quietly. |
| **Reset scores to 0** | Both scores to zero, for the next game. |
| **Super shot (home / away)** | The celebration only, score unchanged: for a test, or a super shot that was scored as +1 +1. |

## 4.4 The clock and the quarter

**Start** and **Stop** are one key on the Stream Deck. **Reset clock** puts a full quarter back (the competition's quarter length; a key can set any time). **+10 s** and **−10 s** nudge it, and a key can add or take off any amount. Type the venue's clock in **Match venue clock** to line the two up, and untick **Show clock** for a game with no reliable clock at all. Quarters are **Q1** to **Q4** plus extra time, or H1 and H2 for a competition played in halves; **Next quarter** steps through them. Changing the quarter doesn't touch the clock, so make the quarter key a Stream Deck Multi Action that also resets the clock.

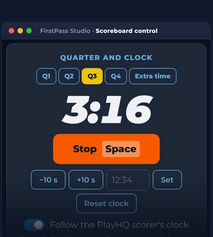

**FIG 4.2** Quarter and clock. The super shot tab, the super shot song and the break sequences all read this clock, so they work by hand as they do when following PlayHQ.

## 4.5 Breaks and celebrations by hand

A sequence that starts by itself at quarter time is started by its key too, so the production manager can run **Quarter time** the moment the siren goes instead of waiting for the clock, or run **Half time** early when a game is called. **Next**, **Pause** and **Stop** work on whatever is playing, and **Automatic sequences on** on the Output page can be unticked for a night where every break is called by hand.

- **Winner.** One key. The celebration reads the board's score when it comes on, so it covers a home win, an away win and a draw. Check the score first. A source with **Result** set to home, away or draw forces it.
- **Super shot and streaks, once.** Besides the automatic sources, a Super shot source set to **Plays: home** or **away**, or a Hot streaks source set to one streak, plays once each time it is turned on. Don't keep a manual source and the automatic one on together, or it plays twice.
- **The Clash.** A pre-game animation, played from its key or as a step in the walk-out sequence, with the two teams, their logos and club colours.
- **Lower thirds.** The person lower third's name box on the Output page suggests the competition's athletes; type a guest's name and title for a commentator or an official. Turn it on when they appear and off a few seconds later.
- **Stats during play.** The ladder lower third, shooting stats, last 10 goals and match up are all Source keys. Each loads fresh when shown, so it has the latest numbers.

## 4.6 Finals

**FIG 4.3** Finals on Scoreboard control. The format for each division is set on the Competitions setup page, and the teams come from the ladder.

PlayHQ often has no finals fixtures until the day. In **Finals** on Scoreboard control, pick the division, then pick each game's winner (the score is optional) as the finals are played; the finals graphic and the ladder's finals key move on with each pick. A result from PlayHQ, when it has one, always wins over one picked here.

CHAPTER 5 OF 11

# The graphics

Every graphic Studio draws, grouped by when it is used. Each one is added to the scene with **Add page** on the Output page, and its options appear as fields under its address; the options named here are the ones worth knowing.

1 Always on · 2 Before the game · 3 During play · 4 After the game · 5 The competition · 6 The breaks · 7 Checking the outputs

All of them follow the game night, game and court picked on Scoreboard control, take the competition's colours, font and logos from its setup, and fit long team names. Cards sit in the space between the title and the scoreboard and shrink to fit when they have more in them than fits. Every page, with its link and a Preview button, is also listed on the Docs tab.

## 5.1 Always on

**FIG 5.1 Scoreboard.** Court, both teams with their logos and club colours, the score, the quarter and the clock, centred at the bottom above the ticker. Options: position (top centre, bottom left and so on), super shot tab on or off, and the naming-rights sponsor's tab.

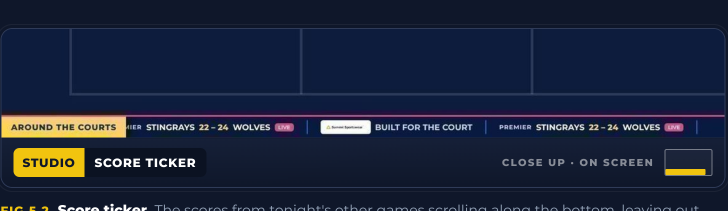

**FIG 5.2 Score ticker.** The scores from tonight's other games scrolling along the bottom, leaving out the game on the board, updated every 30 seconds. Speed from the control page or a Stream Deck key; a Partner sponsor's logo takes a slot in the line.

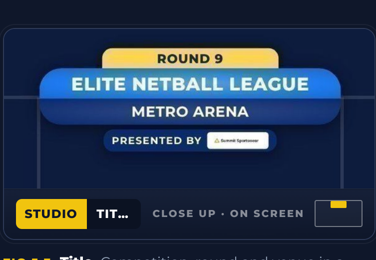

**FIG 5.3 Title.** Competition, round and venue in a banner at the top. Options: an emoji either side, the competition logo above it, top or bottom, and the naming-rights sponsor under it.

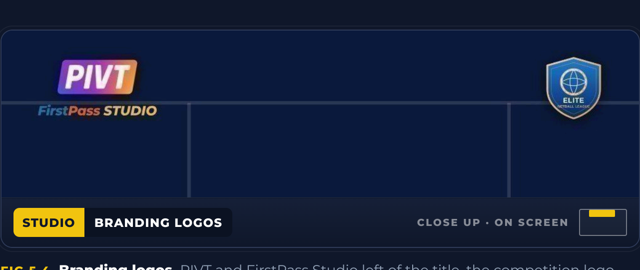

**FIG 5.4 Branding logos.** PIVT and FirstPass Studio left of the title, the competition logo right. Each can be hidden; gap, height and size adjust the placement.

**FIG 5.5 Viewers.** "N watching" from the competition's YouTube and Facebook streams, top right, shown only once the count passes the competition's minimum. **Shows: peak** makes it a card for the end of the night.

## 5.2 Before the game

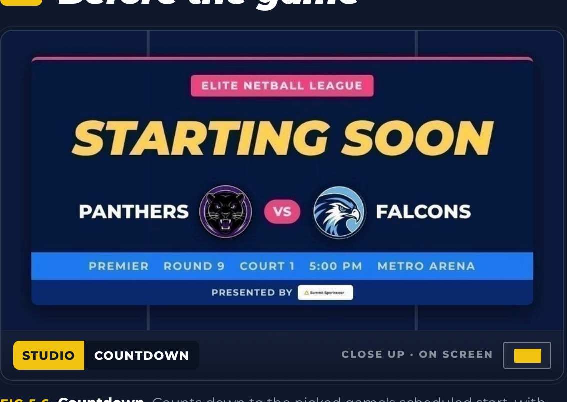

**FIG 5.6 Countdown.** Counts down to the picked game's scheduled start, with the two teams. Options: heading, the words at zero, a fade over the last seconds, position and a sponsor.

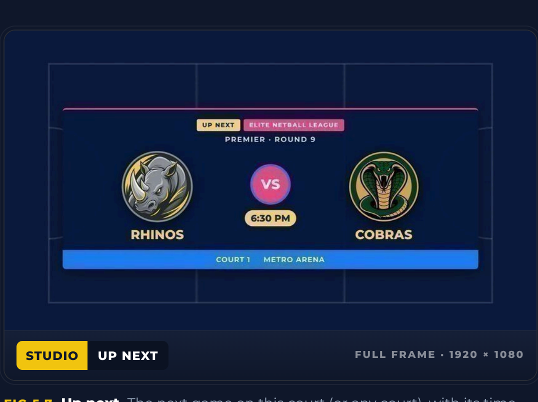

**FIG 5.7 Up next.** The next game on this court (or any court), with its time, teams and logos. After the last game it becomes the end-of-night card.

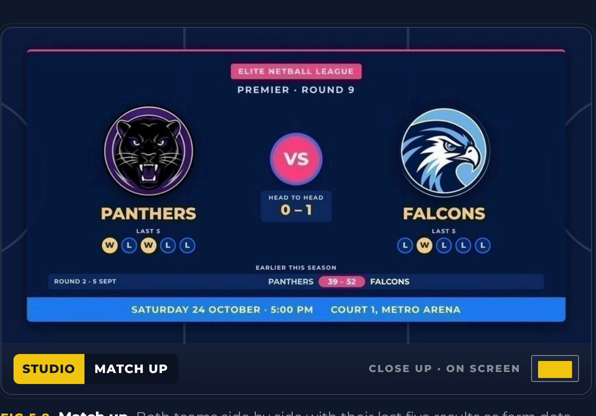

**FIG 5.8 Match up.** Both teams side by side with their last five results as form dots and this season's head to head. **Form** and **Head to head** can each be hidden.

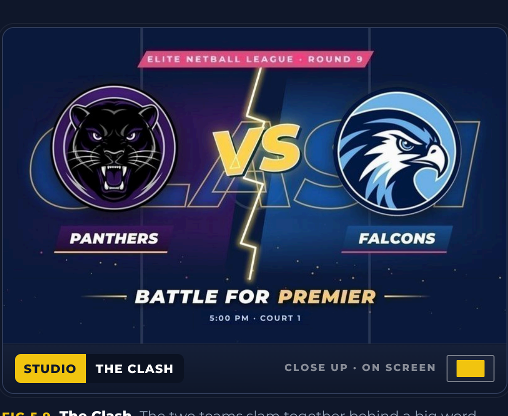

**FIG 5.9 The Clash.** The two teams slam together behind a big word (IMPACT, CLASH, SHOWDOWN, your own) in their club colours. Options: the word, the bottom line, animate away after N seconds.

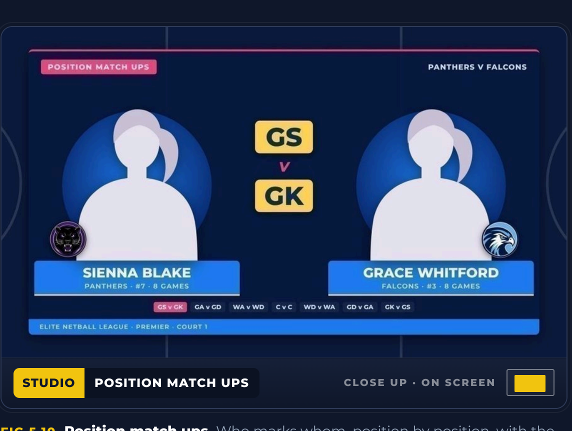

**FIG 5.10 Position match ups.** Who marks whom, position by position, with the athletes' photos from the Athletes page or a silhouette. Options: seconds per pairing, loop or stop, start with GS or GK, one pairing only, animate away at the end.

**FIG 5.11 Position match ups, all seven.** The same page can show every pairing at once as one card.

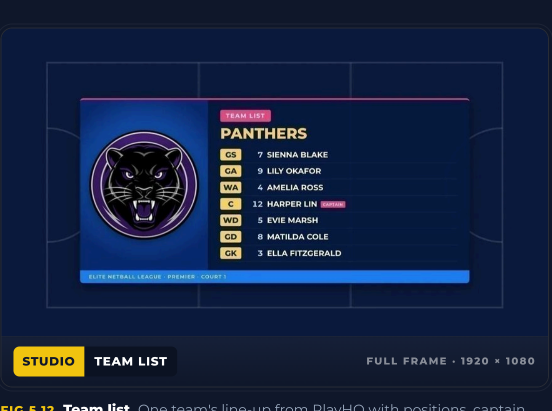

**FIG 5.12 Team list.** One team's line-up from PlayHQ with positions, captain and bench, warmed up before the game so it shows at once. Add one source per side.

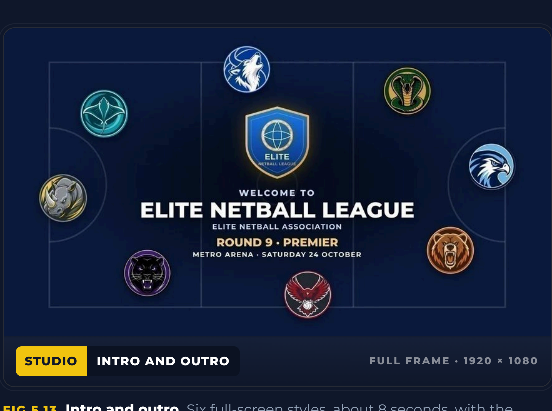

**FIG 5.13 Intro and outro.** Six full-screen styles, about 8 seconds, with the round's teams and a yellow message line. Options: style, teams from a division or round, time on screen, a theme song with its timing and volume, sound effects, a background.

## 5.3 During play

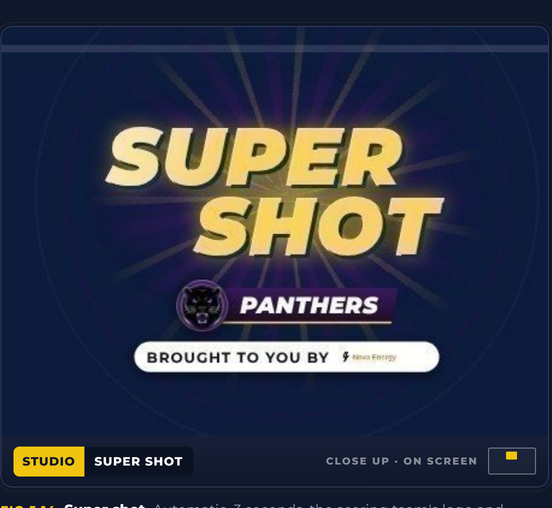

**FIG 5.14 Super shot.** Automatic, 3 seconds, the scoring team's logo and colour; the sponsored-moment tag names who brought it. **Plays: home / away / no team** makes a manual one.

**FIG 5.15 Hot streaks and moments.** Heating up, on fire, goal for goal, hits the front, all square, coming back, on the siren, back to back. Automatic from the goal order, or **Plays** picks one to play once.

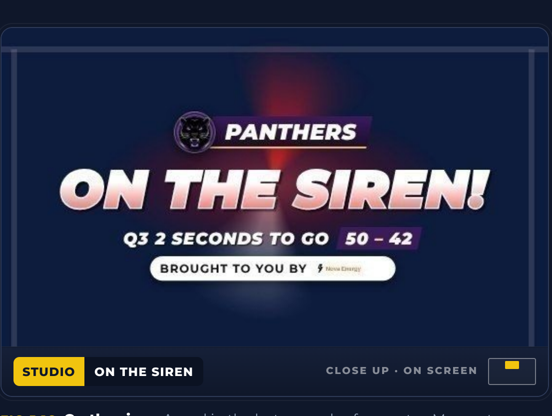

**FIG 5.16 On the siren.** A goal in the last seconds of a quarter. Moments are the only animations that need nothing from you; they also take the sponsor's "brought to you by" tag.

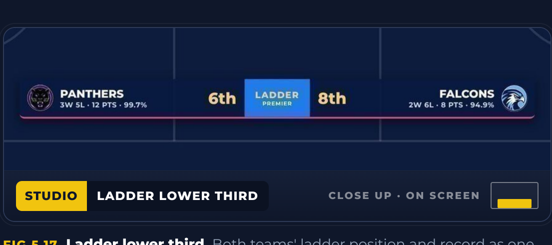

**FIG 5.17 Ladder lower third.** Both teams' ladder position and record as one strip right above the scoreboard, the same width as it, for a glance during play without covering the game.

**FIG 5.18 Last 10 goals.** The game's recent goals oldest to newest with a momentum line and the current run, worked out by Studio from the score, updating while it stays on. Options: across the top or down the side, how many goals, position and heading.

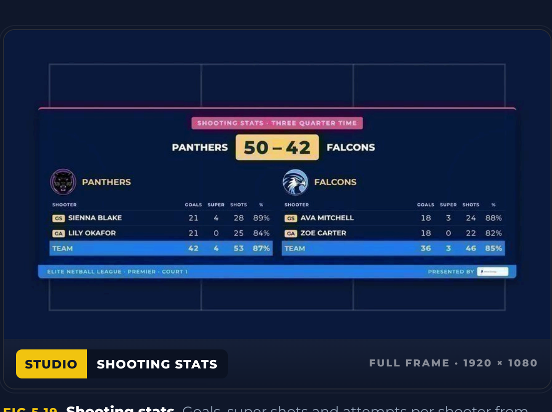

**FIG 5.19 Shooting stats.** Goals, super shots and attempts per shooter from PlayHQ's game page, for a break or a quarter-time sequence. Super columns are left off for a division without super shots.

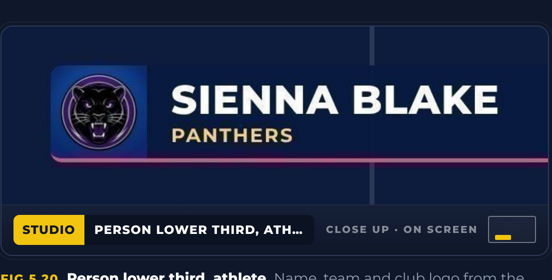

**FIG 5.20 Person lower third, athlete.** Name, team and club logo from the athlete register, with their photo if there is one. The Output page suggests names as you type.

**FIG 5.21 Person lower third, guest.** Name, title and the competition logo, for a commentator, an official or a sponsor's guest. Options: a tab above, position left or right, animate away.

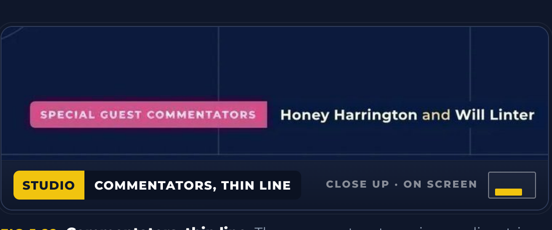

**FIG 5.22 Commentators, thin line.** The commentary team in one slim strip above the scoreboard: a pink tab, like Special guest commentators, and up to four names joined with "and". With no names typed, whoever the Production Planner has on the mic.

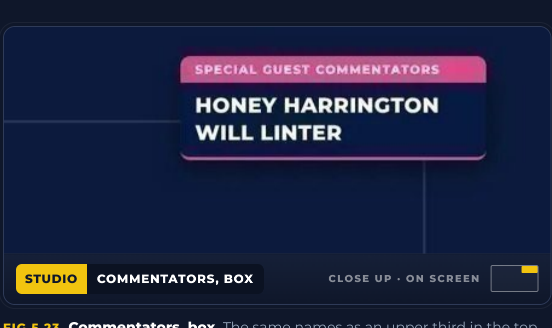

**FIG 5.23 Commentators, box.** The same names as an upper third in the top right corner beside the competition logo, a line per name. Options: under the title instead, the tab's words, animate away.

## 5.4 After the game

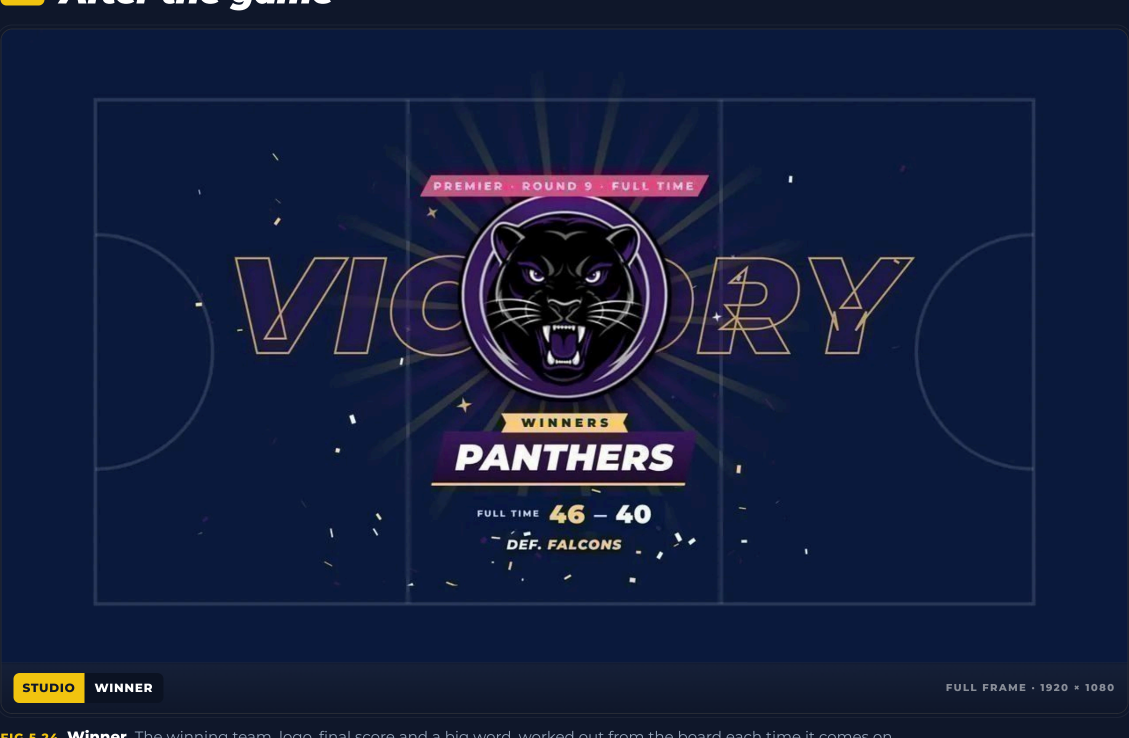

**FIG 5.24 Winner.** The winning team, logo, final score and a big word, worked out from the board each time it comes on. Options: force a result, the word, the line under the score, animate away.

**FIG 5.25 Full time.** The final score from the board with each team's top shooter and shooting accuracy from PlayHQ's game stats. **Heading** makes it a half time card.

**FIG 5.26 Game stats.** The score by quarter, tracked by Studio from the board, then team against team: quarters won, best quarter, super shots made, 3 and 5 goal runs and the longest run, with a sponsor's footer.

**FIG 5.27 Score worm.** The margin through the game as a line, drawn in over a few seconds. Options: drawing time, club colours or the competition's.

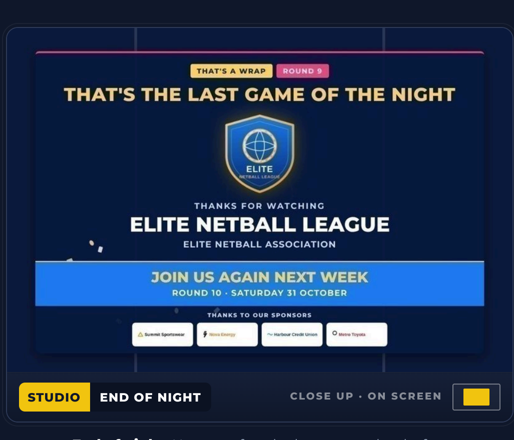

**FIG 5.28 End of night.** Up next after the last game: thanks for watching, next week's date or the finals, and the Supporter sponsors in a strip. Options: the invite line, sponsors on or off.

> **Cards sit in the space between the title and the scoreboard and shrink to fit when they have more in them than fits.**
>
> CHAPTER 5 · THE GRAPHICS

## 5.5 The competition

| # | TEAM | P | W | L | D | B | F | A | % | PTS |
|---|---|---|---|---|---|---|---|---|---|---|
| 1 | Cobras | 8 | 5 | 3 | 0 | 0 | 375 | 363 | 103.3 | 20 |
| 2 | Grizzlies | 8 | 5 | 3 | 0 | 0 | 377 | 368 | 102.5 | 20 |
| 3 | Stingrays | 8 | 4 | 4 | 0 | 0 | 372 | 353 | 105.4 | 16 |
| 4 | Hawks | 8 | 4 | 4 | 0 | 0 | 369 | 376 | 98.1 | 16 |
| 5 | Wolves | 8 | 4 | 4 | 0 | 0 | 355 | 367 | 96.7 | 16 |
| 6 | Panthers | 8 | 3 | 5 | 0 | 0 | 384 | 385 | 99.7 | 12 |
| 7 | Rhinos | 8 | 3 | 5 | 0 | 0 | 388 | 390 | 99.5 | 12 |
| 8 | Falcons | 8 | 2 | 6 | 0 | 0 | 338 | 356 | 94.9 | 8 |

**FIG 5.29 Ladder.** The division's ladder with the finals places marked and a key under it. Options: division, rows, logo on or off, light or dark mode logo.

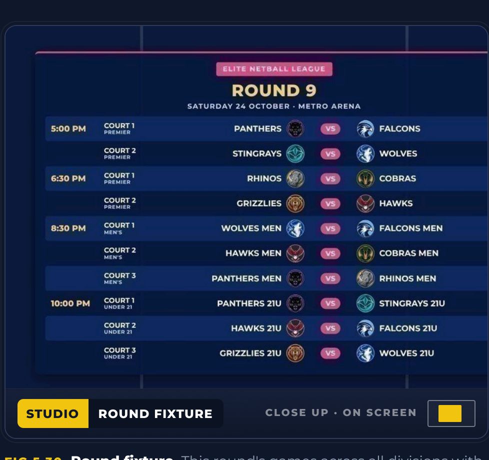

**FIG 5.30 Round fixture.** This round's games across all divisions with day, time and court. **Round** takes next, prev, +2, a number or a name like Final. When divisions are on different rounds, each game shows its own.

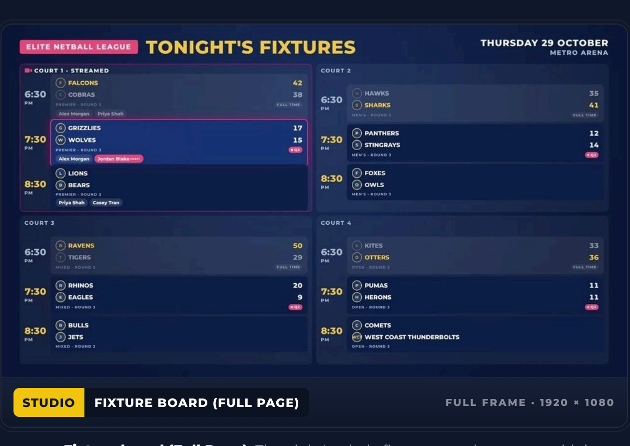

**FIG 5.31 Fixture board (Full Page).** The night's whole fixture, a card per court with its games by time, for a screen in the competition room or backstage, or a picture to share before the night (**Tuesday Night's Fixtures**). The streamed court has a camera and its games name the commentators from the Production Planner; games being played show their live score, and finished ones grey out with the winner in yellow. Not for the stream.

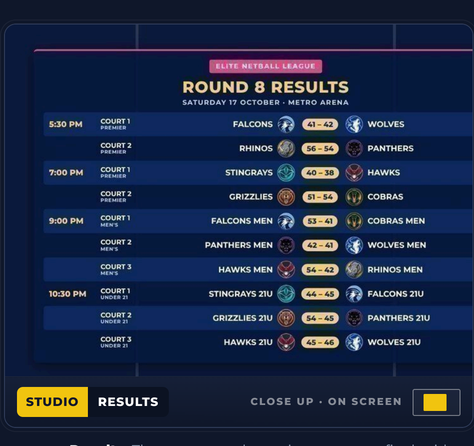

**FIG 5.32 Results.** The same round once its games are final, with scores. The same round option applies.

**FIG 5.33 Top shooters.** The season's leading shooters for a division. Options: order by goals or average, how many shooters, a sponsor footer.

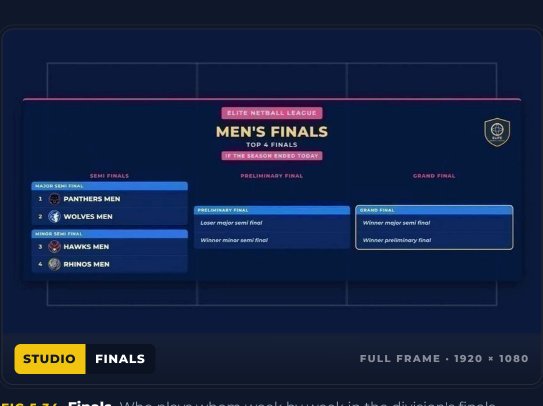

**FIG 5.34 Finals.** Who plays whom week by week in the division's finals format, with ladder positions and scores; "If the season ended today" until the home-and-away rounds finish. Options: one week only, the heading and the line under it.

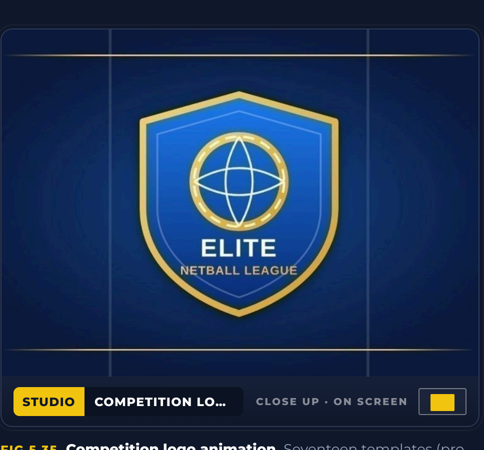

**FIG 5.35 Competition logo animation.** Seventeen templates (pro, coin, tiles, glitch, badge, lightning, court, bibs, net and more), about 5 seconds, with optional words and a smaller line.

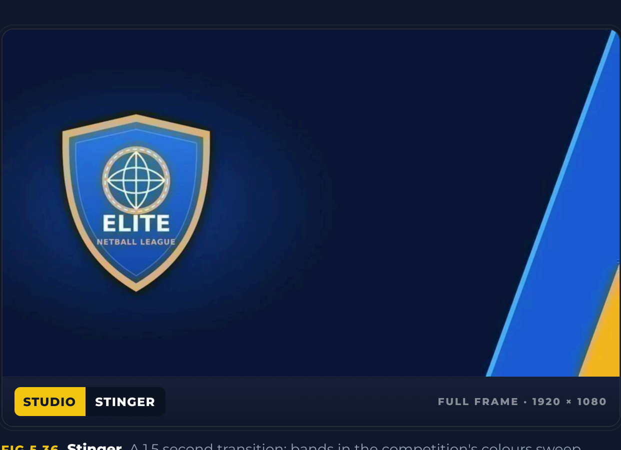

**FIG 5.36 Stinger.** A 1.5 second transition: bands in the competition's colours sweep across and cover the whole picture with the competition logo for half a second, so a cut can happen underneath, then carry on off the other side. Options: hold, length, logo on or off, light or dark mode logo, whoosh volume, and the music quieted for the next scene or dipped while it plays.

## 5.6 The breaks

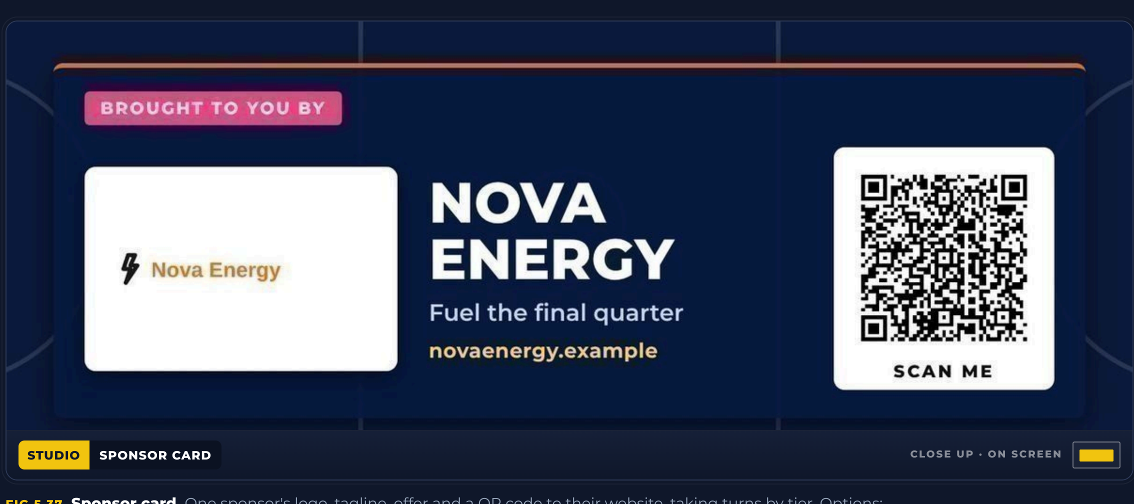

**FIG 5.37 Sponsor card.** One sponsor's logo, tagline, offer and a QR code to their website, taking turns by tier. Options: one sponsor always, which tiers rotate, animate away.

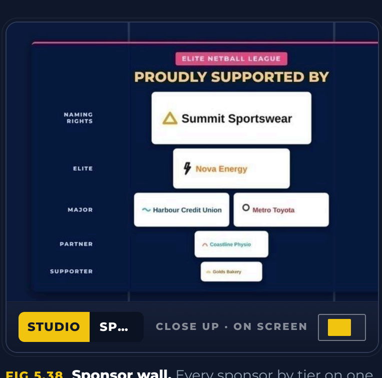

**FIG 5.38 Sponsor wall.** Every sponsor by tier on one card, for the run-up and the close. Options: which tiers, names under the logos.

**FIG 5.39 PIVT and FirstPass Studio ad.** A 10-second house ad for a break with nothing sold. A Sponsor ads step plays it when no sponsor's ad is due, if **House ad** is ticked.

## 5.7 Checking the outputs

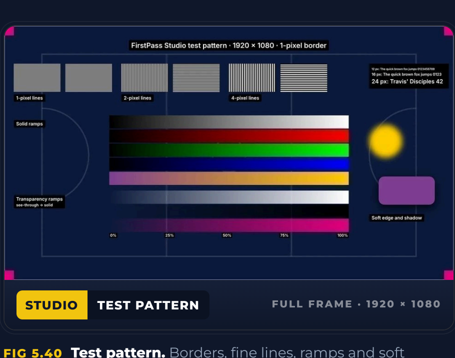

**FIG 5.40 Test pattern.** Borders, fine lines, ramps and soft shapes to check an output, the switcher's scaling and its key end to end before the stream. Never for air.

CHAPTER 5 OF 11

# Competitions setup

Everything about a competition that doesn't come from PlayHQ lives on one page: its PlayHQ link, the names on the graphics, the game rules, finals, game day, colours, font and logos. Set it up once a season and every graphic follows.

PlayHQ · Names on the graphics · Game rules · Finals · Game night · Colours and font · Logos · Live viewers · Templates, export and more

Studio keeps a setup per competition. The one marked **In use** is what every graphic, Scoreboard control, the Sponsors page and the Stream Deck use. Changes aren't kept until you press **Save** (or **Save and use this competition**), and leaving the page with unsaved changes asks first.

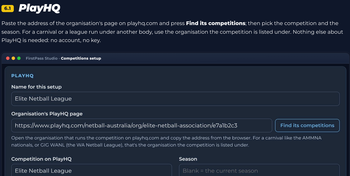

FIG 4.1 The competitions list. Start from a template file (the repository has Thunder League, AMHNA Nationals, GIC WANL, and West Coast Thunder) or press New competition for Studio's defaults.

## 4.1 PlayHQ

Paste the address of the organisation's page on playhq.com and press **Find its competitions**; then pick the competition and the season. For a carnival or a league run under another body, use the organisation the competition is listed under. Nothing else about PlayHQ is needed: no account, no key.

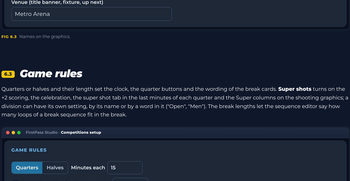

FIG 4.2 The PlayHQ section for the sample league. The season list comes from PlayHQ once the competition is picked.

## 4.2 Names on the graphics

The competition name on the title banner, the organisation name as the ladder's heading, and the venue for the title, fixture and Up next. PlayHQ's names are often long or formal; these are the ones viewers see.

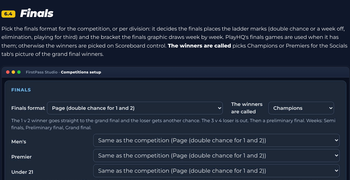

FIG 4.3 Names on the graphics.

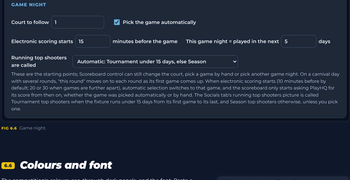
## 4.3 Game rules

Quarters or halves and their length set the clock, the quarter buttons and the wording of the break cards. **Super shots** turns on the +2 scoring. On a carnival, the super shot tab in the last minutes of each quarter and the Super columns on the shooting graphics a division can have its own setting, by its name or by a word in it ("Open", "Men"). The break lengths let the sequence editor say how many loops of a break sequence fit in the break.

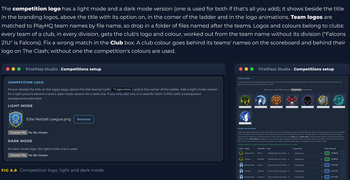


Halves give Scoreboard control HT and H2 buttons and the shooting stats say "Half time" and "Full time". Without super shots the Super columns are left off the shooting stats and top shooters (Scoreboard control keeps its +2 and -2 buttons). Every division follows the lock box unless it has its own setting below. A setting saved for a word rather than a whole division name (GIC WANL comes with "Open", "21" and "Men") covers each division with that word in its name. "Open" covers "Division 1 Open", "Men" covers "Men's" but not "Women's". A division's own setting wins over a word. When the quarter clock gets to the last minutes (5 unless you change it), the scoreboard shows a small "Super shot" tab above its clock for the divisions with super shots, until the quarter ends. 0 leaves the tab off. The break lengths help when building a break sequence on the Output page: its editor says how many times one loop fits in the break. With halves, only half time is used.

FIG 4.4 Game rules. The sample league plays 15-minute quarters with super shots in the last 5 minutes, except in its Under 21 division.

## 4.4 Finals

Pick the finals format for the competition, or per division: it decides the finals places the ladder marks (double chance or a week off, elimination, playing for third) and the bracket the finals graphic draws week by week. PlayHQ's finals games are used when it has them; otherwise the winners are picked on Scoreboard control. **The winners are called** picks Champions or Premiers for the Socials tab's picture of the grand final winners.



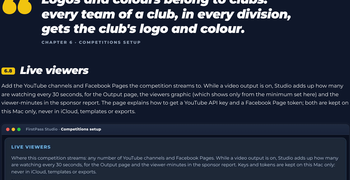
The 1 v 2 winner goes straight to the grand final and the loser gets another chance. The 3 v 4 loser is out. Then a preliminary final. Weeks: Semi finals, Preliminary final, Grand final.

Every division uses the competition's format unless it has its own. The ladder marks the finals places by what each one earns (double chance or week off, elimination, playing for third) with a line under the last one, and the finals graphic shows who plays who week by week. PlayHQ's finals games are used when it has them (rounds with "final" or "play-off" in their name); otherwise pick the winners on Scoreboard control. **The winners are called** names the grand final winners on the Socials tab's Champions picture.

FIG 4.5 Finals formats, per division where they differ.

## 4.5 Game night

The court Studio follows, whether it picks the game automatically, when electronic scoring starts before each game (10 minutes by default, 20 or 30 when games are further apart) and how many days ahead tonight's games are found. These are starting points: Scoreboard control can change the court, pick a game by hand or pick another game night. On a carnival day with several rounds, this round moves on as each round's first game comes up. **Running top shooters are called** sets the Socials picture's name. Automatic calls it Tournament top shooters when the fixture runs under 15 days and Season top shooters otherwise.



These are the starting points; Scoreboard control can still change the court, pick a game by hand or pick another game night. On a carnival day with several rounds, "this round" moves on to each round as its first game comes up. When electronic scoring starts (10 minutes before by default, 20 or 30 when games are further apart), automatic selection switches to that game, and the scoreboard only starts asking PlayHQ for its score from then on, whether the game was picked automatically or by hand. The Socials tab's running top shooters picture is called Tournament top shooters when the fixture runs under 15 days from its first game to its last, and Season top shooters otherwise, unless you pick one.

FIG 4.6 Game night.

## 4.6 Colours and font

The competition's colours, see-through dark panels, and the font. Paste a brand kit's text into **Brand kit colours** and every HEX or RGB value in it becomes a swatch in each colour picker. Add a font file (TTF, OTF, WOFF or WOFF2, one per weight or a variable font) and it travels with the competition and its template, so the graphics look the same on any Mac every font is sized to match the capitals of Montserrat, which the graphics were drawn with. The preview under the pickers shows a rough title and scoreboard in the colours before you save.

FIG 4.7 Colours and font, with the preview.

## 4.7 Logos

The **competition logo** has a light mode and a dark mode version (one is used for both if that's all you add); it shows beside the title in the branding logos, above the title with its option on, in the corner of the ladder and in the logo animations. **Team logos** are matched to PlayHQ team names by file name, so drop in a folder of files named after the teams. Scoreboard control can change a club, in every division, gets the club's logo and colour, worked out from the team name without its division ("Falcons 2U" is Falcons). It's a wrong match in that **Club** box. A club colour goes behind its teams' names on the scoreboard and behind their logo on The Clash; without one the competition's colours are used.

FIG 4.8 Competition logo, light and dark mode.

FIG 4.9 Team logos and the teams on PlayHQ, grouped by club with a club colour each.

> **Logos and colours belong to clubs: every team of a club, in every division, gets the club's logo and colour.**
>
> CHAPTER 5 · COMPETITIONS SETUP

## 4.8 Live viewers

Add the YouTube channels and Facebook Pages the competition streams to. While a video output is on, Studio adds up how many are watching every 30 seconds, for the Output page, the viewers graphic (which shows only from the minimum set here) and the viewer-minutes in the sponsor report. The page explains how to get a YouTube API key and a Facebook Page token; both are kept on this Mac only, never in iCloud, templates or exports.

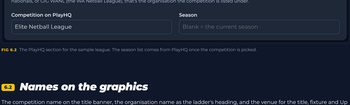


FIG 4.10 Live viewers.

## 4.9 Templates, export and more

**Export as template** saves the competition's settings, team logos, competition logos, font and sponsors (with their logos) as one .json file to import on any Studio or keep as a backup; **Import a template file** adds it. A PlayHQ Client ID is only needed if PlayHQ's game page has no live ups and the association has given you one. **Delete this competition** removes it, deleting the one in use switches the graphics to another.

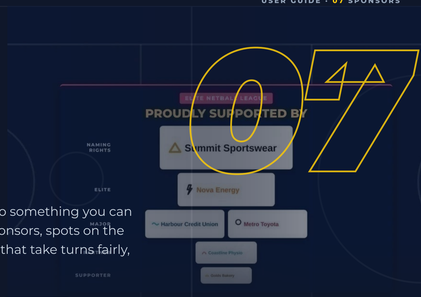
FIG 4.11 The More section. Client ID, export and delete.

CHAPTER 7 OF 11

# Sponsors

The Sponsors tab turns sponsorship into something you can sell, run and prove: a tiered library of sponsors, spots on the graphics that fill themselves, ad breaks that take turns fairly, and a report of what each sponsor got.

1 Tiers · 2 A sponsor · 3 Spots and moments · 4 Proof of play



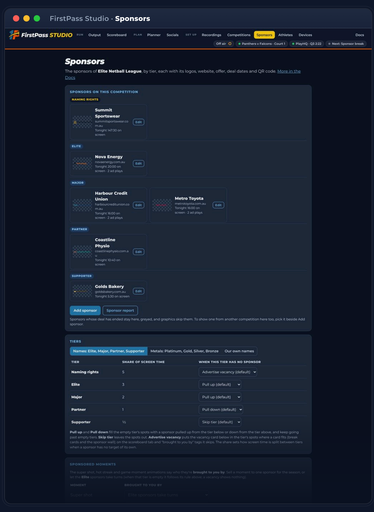


FIG 7.1

The Sponsors page for the sample league: sponsors by tier with tonight's exposure meter, the tier rules, sponsored moments and the vacancy card.

## 7.1 Tiers

Five fixed ranks, named per competition: the **Names** preset (Naming rights, Elite, Major, Partner, Supporter), the **Metals** preset (Naming rights, Platinum, Gold, Silver, Bronze) or your own. Each tier's **share of screen time** decides how turns are split when a sponsor has no target of its own. Each tier gets different places:

| TIER | WHERE IT SHOWS |
|---|---|
| **Naming rights** | A tab on the scoreboard, under the title banner, first on the sponsor wall, and everything below. |
| **Elite** | The sponsored moments (super shot, streaks), ads in the breaks, the break card, and everything below. |
| **Major** | Ads and break cards, "presented by" footers on the stats cards, countdown and top shooters. |
| **Partner** | A slot in the score ticker and the logo spots. |
| **Supporter** | The sponsor wall and the end-of-night strip. |

**When this tier has no sponsor** says what a spot does when its tier is empty: **Pull up** fills it from the tier below, **Pull down** from the tier above, **Skip tier** leaves it out, and **Advertise vacancy** shows the competition's vacancy card wherever a card fits. The vacancy card has a heading, a contact, a message and a link or email for its QR code, so an empty tier finds its own sponsor.

> ***The vacancy card has a heading, a contact, a message and a link or email for its QR code, so an empty tier finds its own sponsor.***
>
> CHAPTER 7 · SPONSORS

## 7.2 A sponsor

A sponsor has a name, tagline, website, offer, brand colour, category, deal dates, and optional targets per stream (minutes on screen, ad plays). Category keeps competing sponsors apart in rotation. Add a colour logo and a white one for dark panels (without a white one, the colour logo is made white). A sponsor is kept once and can be **shown on** several competitions at its own tier in each; sponsors whose deal has ended stay greyed and the graphics skip them.

**Ads** are videos or stills (up to 10 per sponsor) in the media folder. A **Sponsor ads** step in a sequence plays the next ads due, taking turns fairly by tier, each video to its end with sound and each still for its seconds; tick **House ad** and the PIVT and FirstPass Studio ad plays when nothing is due. The **QR code** points to the sponsor's website with tracking tags, so visits from the stream show in their analytics; save it as a PNG for the sponsor's own use.

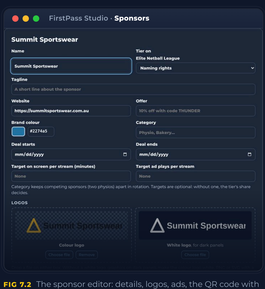

FIG 7.2 The sponsor editor: details, logos, ads, the QR code with tracking tags, and the competitions it is shown on.

## 7.3 Spots and moments

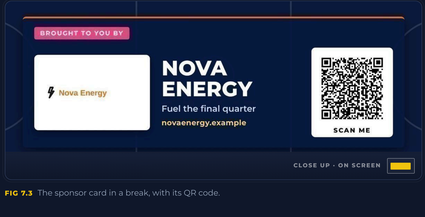

FIG 7.3 The sponsor card in a break, with its QR code.

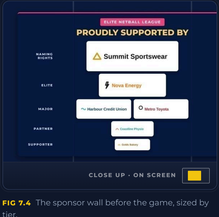

FIG 7.4 The sponsor wall before the game, sized by tier.

Every spot picks its sponsor from the Sponsors page by default. Each graphic's **Sponsor** option can pin one sponsor or turn the spot off. **Sponsored moments** sells the super shot, each hot streak and each game moment to one sponsor for the season, whose name appears in a "brought to you by" tag on the animation; by default the Elite sponsors take turns.

## 7.4 Proof of play

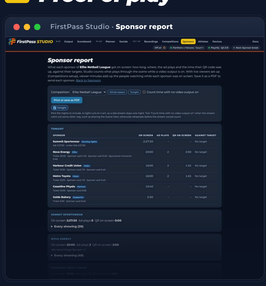

FIG 7.5 The sponsor report for the sample night.

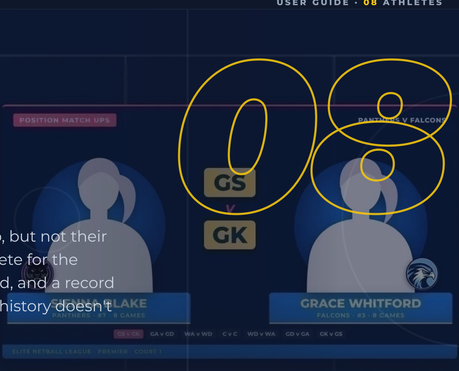
While a video output is on, Studio logs every second each sponsor is on screen and every ad played, matched to the scene's sources, and reads the live viewer count every 30 seconds. **Sponsor report** turns that into a page per night (or a run of nights) with minutes on screen, ad plays, viewer-minutes, peak and average viewers per sponsor, ready to print or save as a PDF for the sponsor. A tick box counts time with no video output on, for a rehearsal. With more than one output, only Output 1 and outputs with **Counts for sponsors** ticked are counted, and each counts as on air only while it's on: an output set to **Web links only** is off.

CHAPTER 8 OF 11

# Athletes

PlayHQ gives Studio every athlete in a line-up, but not their faces. The Athletes tab holds a photo per athlete for the position match ups and the person lower third, and a record of positions and games played that PlayHQ's history doesn't cover.

1. Photos
2. Positions and games played



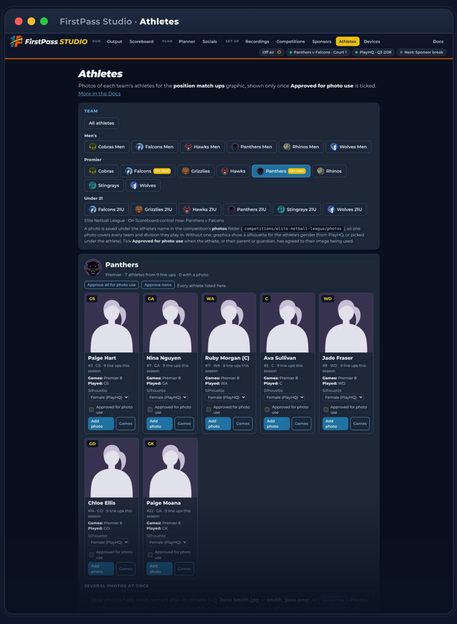


FIG 8.1

The Athletes page: teams grouped by division, every athlete PlayHQ has in a line-up this season, and the photo library.

## 8.1 Photos

Pick a team and add a photo to each athlete, or drop a folder of photos named after the athletes ("Jane Smith.jpg" or "smith_jane.png") on **Several photos at once**; any that don't match wait in the photo library to be given to someone. A photo is saved under the athlete's name for the competition, so an athlete in two divisions needs one photo. Studio also remembers each athlete's PlayHQ id, so if PlayHQ changes a player's name during the season, their photo still finds them. Photos are made smaller when saved; cut-out PNGs with a transparent background look best. Without a photo the graphics show a silhouette for the athlete's gender, taken from the division (men's, women's; mixed and open are neutral) and changeable under the athlete. **An athlete PlayHQ doesn't list yet** adds one ahead of their first game.

A photo only goes on the stream and the Socials pictures once **Approved for photo use** is ticked under the athlete. Tick it when the athlete, or their parent or guardian, has agreed to their image being used. Until then the graphics show the silhouette. **Approve all for photo use** ticks every athlete listed for the team at once.

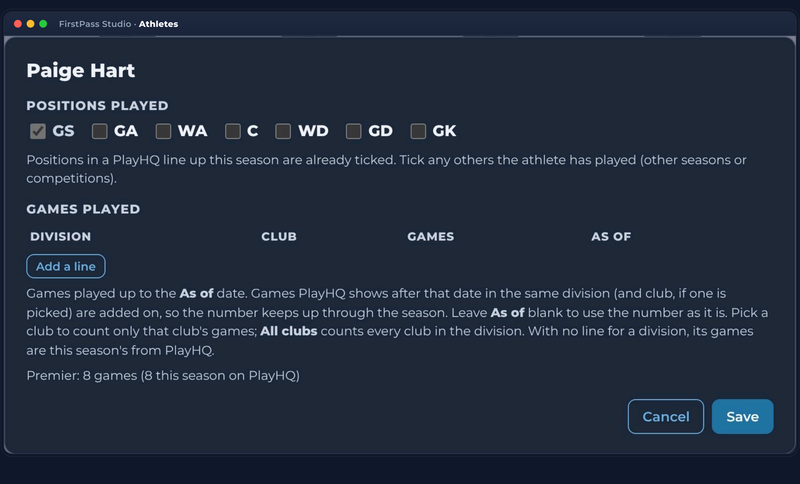
FIG 8.2 Position match ups use the photos, pairing by pairing.

FIG 8.3 The athlete lower third, named from the register as you type on the Output page.

> ***A photo is saved under the athlete's name for the competition, so an athlete in two divisions needs one photo.***
>
> CHAPTER 8 · ATHLETES

## 8.2 Positions and games played

**Games** under an athlete opens their record. Positions played in a PlayHQ line-up this season are ticked already; tick any others from other seasons or competitions. Games played takes a line per division (and club): the number as of a date, to which Studio adds the games PlayHQ shows after it, so milestones keep up through the season. With no line, a division's games are this season's from PlayHQ.



CHAPTER 9 OF 11

# Stream Deck

A Stream Deck is the control surface for stream night: one key per source, scene and sequence, each lit while it's on, plus score, clock and quarter keys for a game run by hand. Studio ships its own plugin, and every control also has a plain link. It all lives on the **Devices** tab, under the list of devices allowed to change things (Stream Decks and their link sets, paired phones and programs), which is also where **Devices** in the menu bar icon goes.

1. The plugin
2. Links for everything else
3. Timed keys and the icon pack

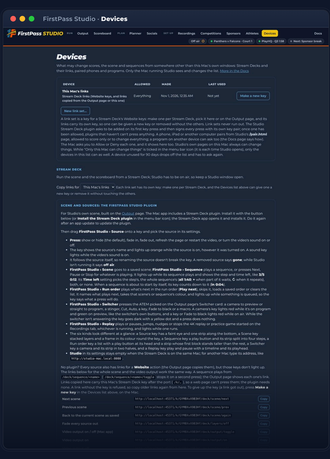


FIG 9.1

The Devices tab: the devices allowed to change things at the top, then the plugin, the scoring and clock links, and the full reference below them.

## 9.1 The plugin

Install it from the 1P menu (**Install the Stream Deck plugin**) or the button on the Output page; the Stream Deck app opens and installs it. Do the same after an app update. The **Studio** field in a key's settings stays empty when the Stream Deck is on the same Mac; for another Mac, type its address, like `http://studio-mac.local:8080`. Six kinds of key, each a different shape at a glance:

| KEY | LOOKS | PRESS | SHOWS |
|---|---|---|---|
| **Source** | A faint eye and one strip along the bottom | Show or hide (default), fade in, fade out, refresh the page or restart the video, video sound on or off | The source's name; lit in its output's colour while it's on, however it was turned on |
| **Scene** | Stacked layers and a frame in its colour | Go to a scene, next or previous scene, or back to the current scene as saved | Lit while its scene is on, with a yellow dot when sources have changed since |
| **Sequence** | A play button and a strip in four steps | Play or stop a sequence, play from the first step, or Next, Next when waiting, Pause and Stop for whatever is playing | Step and time left, like **3/5 0:12**, the whole sequence's time, both or none; **in 0:04** when one is about to start by itself |
| **Run order** | A list with a play button at its head, and a strip whose first block stands taller than the ones behind it | Play next (default), skip what's next, load a saved order, clear the list | What plays next, like **Play next ▶ / Quarter break / +2 more**, in that scene's or sequence's colour; lit while something is queued, **empty** when nothing is; a Load key names its order and how many items it holds |
| **Switcher** | A camera and a strip in two halves | A camera to preview (default) or program, stinger to a camera, Cut, Auto, an upstream or downstream key, Fade to black, run a macro | The camera's name from the switcher; red on program and green on preview, a key or Fade to black red while on air; a yellow dot while the switcher isn't answering |
| **Replay** | Play and pause with a timeline and its playhead | Play or pause, next or previous moment, nudge, stop the 4K replay or practice game running | What it acts on (**4K replay**, **Practice**, **Demo**); lit while one runs |

Keys follow their source, scene or sequence by id, so renaming on the Output page doesn't break them; a removed one says **gone**, and while Studio is off air they say **off air**. Colour groups keys by the part of the stream: green pre-game, blue live, purple quarter time, grey post-game, yellow ads, or the scene's or sequence's own colour.

With more than one output, each key has an **Output** setting: the output it shows a source on, plays a scene on or plays a sequence on (a Switcher key has none: there is one switcher). A lit key takes its output's colour (Output 1 orange, 2 pink, 3 blue, 4 green) with a black title, so a commentators' Stream Deck of Commentary keys lights pink while the stream's keys light orange. A key for a removed output says **no output**.

> **Keys follow their source, scene or sequence by id, so renaming on the Output page doesn't break them.**
>
> CHAPTER 9 · STREAM DECK

## 9.2 Links for everything else

Every control is also a link, for a **System > Website** action (tick **GET request in background**), a Multi Action, or any program on the network. Scoreboard control, the Output page and the Stream Deck tab copy them, with this Mac's Stream Deck key after the port (`…:8080/k/key/deck/…`) so no web page can press them. The Studio plugin needs no key; the first time you press one of its keys the Mac asks you to **Allow** it, and from then on it signs every press with its own key pair. A link without it is refused, so copy any older Website keys' links again from Studio. With more than one Stream Deck, give each its own link set: pick **New link set…** in **Copy links for** on the Stream Deck tab, name it after the Stream Deck, and copy its links from there. If a link gets out, choose **Devices** in the menu bar icon and press **Make a new key** on that set: its links stop working and you copy them again, while the other Stream Decks carry on. A program on another computer can ask for a key of its own: the Mac asks you to **Allow** or **Deny** it by name and address, and Devices can take that one away without touching your other keys. The useful ones:

| GROUP | LINKS |
|---|---|
| **Scores** | Home and away +1, +2, −1, −2; reset to 0; play a super shot or any streak without changing the score. |
| **Scoring mode** | Follow PlayHQ, Manual, toggle. Any score key switches to Manual. |
| **Clock** | Start, stop, toggle, reset, set to a time, add or take off any amount, follow the PlayHQ clock on or off, quarter length. |
| **Quarter** | Q1 to Q4, extra time, next, previous. The clock is separate; pair them in a Multi Action. |
| **Game** | Automatic selection on, off, toggle; the court to follow. |
| **Ticker** | Faster, slower, normal, a set speed. |
| **Sources** | Show, hide, toggle, restart, video sound; every source out; video output on or off. |
| **Scenes** | Go to a scene, next, previous, back to the scene as saved. |
| **Sequences** | Play, toggle, next, advance (only when waiting), pause, stop, start the one about to start now, cancel it, automatic sequences on or off. |
| **Run order** | Play what's next, skip it, clear the list, add a sequence or scene, load a saved order. |
| **Music** | Play, pause, resume, stop, fade out, next, previous, load a song or playlist, mute, duck; add `?fade=2` for a 2-second fade. |
| **Sponsors** | Play the next sponsor ad due. |
| **Switcher** | Cut, auto, stinger (to a camera or what's on preview), fade to black, a camera to preview or program, an upstream or downstream key on, off or toggled, run a macro. |

**A LAYOUT THAT WORKS**

Put the scene keys in a row across the top (Pre-game, Live game, Clear), the sequence keys under them with Next when waiting and Stop at the end, and a page of Source keys for the lower thirds and stats. A game run by hand gets a second page: home scores left, away scores right, the clock and quarter keys down the middle.

## 9.3 Timed keys and the icon pack

A second plugin, **Timed Sequence**, arms a key for a time of day and then presses a list of links with delays between them: reset the board at 18:55 and start the clock at 19:00, say. It is built from the repository. The **FirstPass Studio Characters** icon pack gives Stream Deck keys letters, numbers and symbols in the Studio style, for labelling keys by hand.

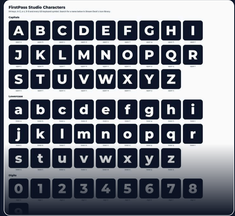

FIG 9.2 The Characters icon pack: A to Z, a to z, 0 to 9 and the usual symbols on navy.

CHAPTER 10 OF 11

# Settings and care

Where Studio keeps its settings, how to carry them between Macs and back them up, how updates arrive, and what to do when something isn't right.

1 The 1P menu · 2 The data folder · 3 Settings in iCloud Drive · 4 Backup and restore · 5 Updates · 6 Links and other devices · 7 When something isn't right · 8 Data and bandwidth

## 10.1 The 1P menu

The menu bar icon is Studio's home. From top to bottom: the version and whether Studio is on air; **Stop Studio** (while on air); **Open Studio**, Scoreboard control, Competition setup and **Copy the Studio link**; **Devices**; **User guide**; **Install the Stream Deck plugin**; **Open the settings folder**; **Settings folder** (iCloud), **Back up…** and **Restore…**; **Open the debug log**, **Open the app log**, **Restart Studio**, **Check for updates**; **Open at login**, **Appearance** (Follow the Mac, Light, Dark), **Only this Mac can change things**, **What's new…** and Quit.

This guide comes with Studio: **User guide** in the menu bar icon, **Help > FirstPass Studio User Guide** while a Studio window is in front, or the link at the top of the Docs tab open it in a window of its own, with no internet needed. Phones and other computers on the network can read it too, at the Studio link with `/guide/` on the end.

## 10.2 The data folder

Everything Studio saves lives in one folder outside the app, `~/Library/Application Support/FirstPass Studio`, so updates never touch it. In it: **competitions/** (a folder per competition with its settings, logos, font, athlete photos and register), **sponsors/**, the scene, sequences, music and playlists, the **media** folder, **control.json** (Scoreboard control's choices), **scoreboard-state.json** (the game, scores and clock, saved every few seconds so a restart mid-game loses nothing), **config.json** for this Mac's own settings, **logs/** and **backups/**.

## 10.3 Settings in iCloud Drive

**Settings folder > Move to iCloud Drive…** moves the settings into a folder you choose in iCloud Drive, in a subfolder named after this Mac, so each Mac on the same Apple account keeps its own and none saves over another's. The debug log, scores and clock, caches and window positions always stay on the Mac. **Restore from another Mac…** copies another Mac's settings over this one's (competitions, scenes, sequences, music, control choices), backing this Mac's up first. **Move back to this Mac…** undoes the move. Studio goes off air for a moment for each and comes straight back.

## 10.4 Backup and restore

**Back up…** saves every setting in one zip named with the date and time, with notes you type and, if you choose, the media folder; beside it goes a text summary listing the competitions, sequences, playlists, sources, scenes and sponsors inside. **Restore…** shows when and where a backup was made and what it holds, backs up this Mac's settings first, and replaces them only once the whole zip has unpacked and checked out. This Mac keeps its own **Only this Mac can change things** choice, port and link name whatever the backup says. Make a backup after setting up a season and before trying anything new on the Output page.

## 10.5 Updates

Updates download by themselves and install when the app quits, never mid-stream; **Check for updates** looks now, and **Restart to update** appears when one is ready. If a newer version has come out since that one downloaded, it asks whether to get the newer one first or install the one it named. The first launch after an update shows **What's new**, the changes since the version you last opened. When an update changes how settings are saved, Studio backs the data folder up to **backups/** first; settings saved by a newer Studio open read-only in an older one.

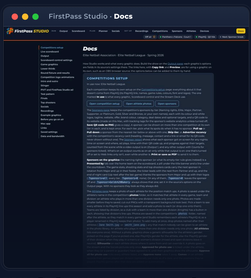

**FIG 10.1** The Docs tab: every page with its link, Copy and Preview, the page options, and the notes this guide draws on.

> **Updates download by themselves and install when the app quits, never mid-stream.**
>
> CHAPTER 10 · SETTINGS AND CARE

## 10.6 Links and other devices

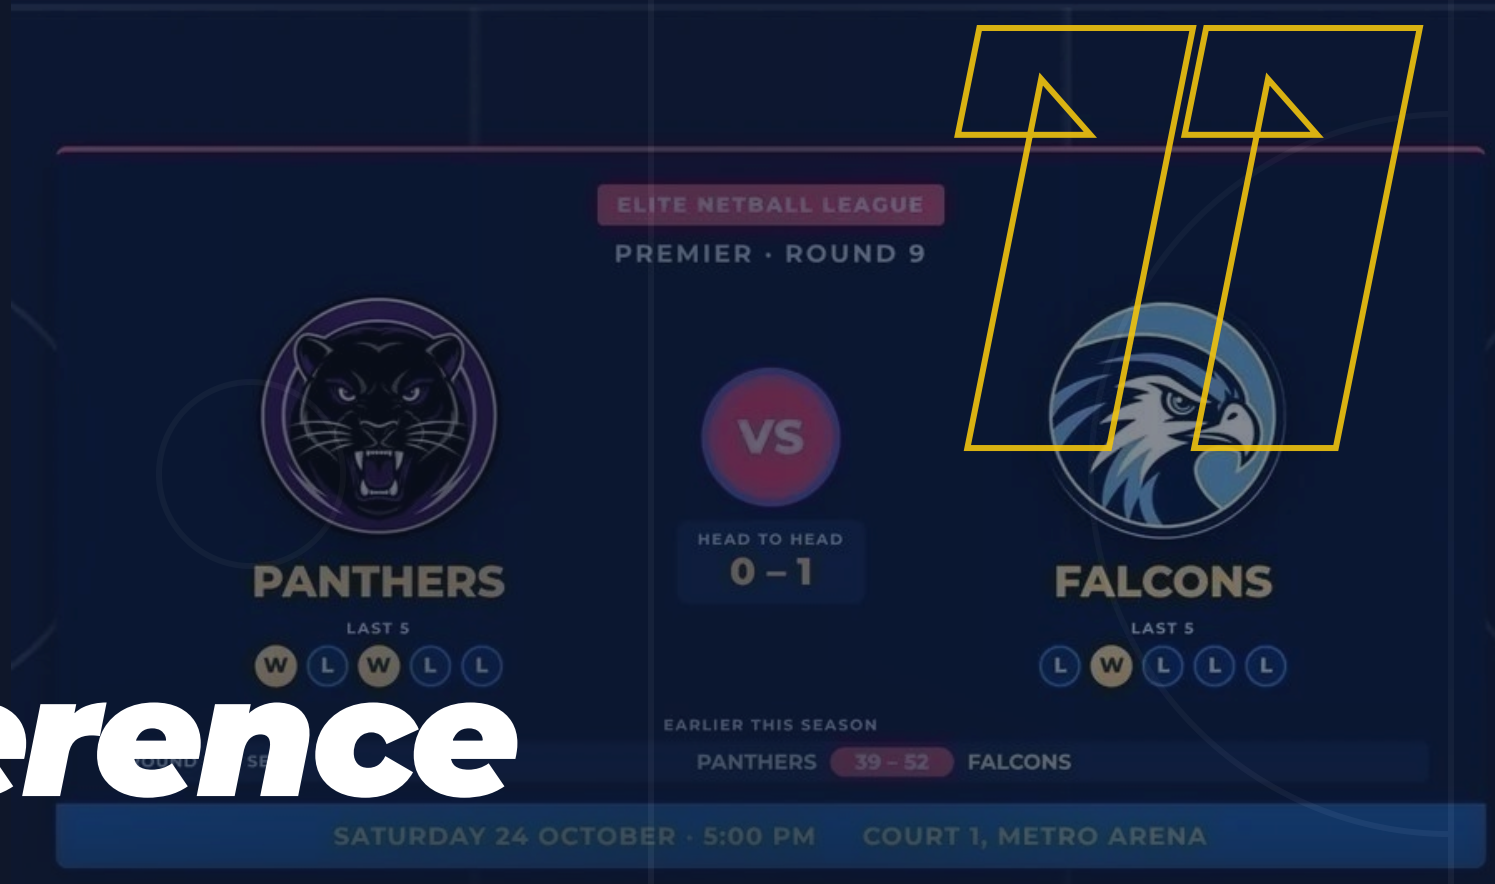
Studio's links use this Mac's Bonjour name (the Local hostname in System Settings > General > Sharing), so the same link works from a phone, another computer or a Stream Deck on the network; `localhost` still works on the Mac. Anything on the network can open the graphics. Only this Mac can change scores, the scene, sequences and settings: **Only this Mac can change things** is ticked every time Studio opens. To score from a phone or let another computer drive, pair it instead: open `/pair.html` on it (the Studio link with `/pair.html` on the end), type a name and press **Ask the Mac**, then choose **Allow scoring only** or **Allow everything** on the Mac. A paired device works with the box ticked, and **Devices** in the menu bar icon lists it, changes what it may do, or removes it. Unticking the box lets every device on the network in until Studio quits; keep that for emergencies. On a network you don't control, leave it ticked, or block incoming connections to FirstPass Studio in the Mac's firewall.

## 10.7 When something isn't right

| WHAT YOU SEE | WHAT TO DO |
|---|---|
| **The board doesn't move before the game** | Normal: nothing is read before the electronic scoring window opens. Scoreboard control says when it will start checking. |
| **The board stops mid-game** | PlayHQ isn't answering. Switch to Manual and run it by hand; Follow PlayHQ picks it up again when PlayHQ is back. |
| **The wrong night or game is on** | Pick the game night on Scoreboard control and pick the game; tick automatic selection again afterwards. |
| **A key says off air** | No Studio window is open. Open Studio from the 1P menu. |
| **A graphic looks stale** | Press its Restart key or turn it off and on; with **Load the page fresh** on it reloads each time. |
| **Studio itself stops** | **Restart Studio** in the 1P menu brings it back with the scores and clock it had. |
| **Anything else** | **Open the debug log** in the 1P menu. Everything Studio does and every PlayHQ answer is in it, 15 MB at most. Send it with a note of the time. |

## 10.8 Data and bandwidth

The graphics only ever talk to Studio on the Mac. Studio alone contacts PlayHQ: one small request every 5 seconds for the followed game (or as set, down to one a second), the ticker's other courts every 30 seconds, the fixture about once a minute for automatic selection, and the rest once when a graphic loads. The Production Planner and the Socials tab read the same fixture, results and ladders through the same cache, and finished games' line ups once, so they add nothing; the Fixture board reads other courts' live scores the ticker's way, so it adds nothing while the ticker is on and at most one request a minute per live game when it isn't. Commentator stats' auto-refresh asks Studio only; its team lists are read at the start and at each quarter break. Finished games are read once and kept. Extra outputs read the same data from Studio, so they add nothing here. It all comes to well under a megabyte an hour, so a phone hotspot is enough for Studio; the stream itself is the bandwidth.



CHAPTER 11 OF 11

# Quick reference

1 Keyboard
2 Stream night in nine lines
3 Where things are set

## 11.1 Keyboard

| WHERE | KEYS |
|---|---|
| **Scoreboard control** | A / Z home +1 / −1, K / M away +1 / −1, Shift for +2 / −2, Space starts or stops the clock. |
| **Any Studio window** | ⌘1 to ⌘9 and ⌘0 go to Output, Production Planner, Scoreboard control, Recordings, Socials, Competitions setup, Sponsors, Athletes, Devices, Docs. ⌘N new window, ⇧⌘O open in the browser, ⇧⌘C copy the page link, ⌘[ back, ⌥⌘W close every Studio window. |

## 11.2 Stream night in nine lines

**01**
Open Studio from the 1P menu and keep the Output page open all night.

**02**
Check the competition in use and the court on Competitions setup.

**03**
On Scoreboard control, the first game on your court is picked with Follow PlayHQ on.

**04**
Turn on the video output your switcher takes and show one graphic to see it land.

**05**
Play a few seconds of music and an animation with sound.

**06**
Press a Source key and watch the Output page follow it; put scoring back to Follow PlayHQ after testing.

**07**
Go to the Live game scene and let the sequences run the breaks.

**08**
Pick finals winners as they happen; turn on lower thirds when people appear.

**09**
Press Stream close, turn the output off, and send the sponsor report.

## 11.3 Where things are set

| TO CHANGE | GO TO |
|---|---|
| **Colours, font, logos, rules, finals format, court** | Competitions setup |
| **Which game, scoring mode, score, clock, finals winners** | Scoreboard control |
| **What's on screen, scenes, sequences, playlists, music, mics, outputs** | Output |
| **A graphic's options (heading, position, division, animate away)** | Output, under the source's address |
| **Sponsors, tiers, ads, moments, the report** | Sponsors |
| **Photos, positions, games played** | Athletes |
| **Each night's court, the commentators and who calls each game** | Production Planner |
| **Keys and links, and the devices allowed to change things** | Devices |
| **Pictures of a game night for social media** | Socials |
| **Backups, iCloud, updates, the debug log** | The 1P menu |

FirstPass Studio is made by PIVT. The Elite Netball League, its clubs, athletes and sponsors are fictional.
